THURSDAY, MARCH 4, 1869.

THE GODERICH SALT MEN AND THEIR BACKERS.

We once heard a person, experienced in the ways of the world, propose to wager that he could practically demonstrate the thoughtless alacrity with which large numbers of persons will sign any petition presented to them, by getting a formidable array of signatures to a petition to hang the Governor General, without trial or benefit of clergy. And it must be confessed that even this exaggerated way of stating the fact was not without its germ of truth. Nor are the excusably or inexcusably ignorant the only offenders in this respect. A noteable example is before us. During the last session, sixty-four members of the Legislature of Ontario petitioned the Ottawa Parliament to impose a duty on salt, in the interest of the Goderich salt men. The prominence given to the question in this and other ways forces its consideration upon us.

A duty on salt has always been an odious duty, because the article is a prime necessary of life, with which civilized men find it impossible to dispense. It would almost be easier to do without bread than salt. The Scottish peasant finds no difficulty in subsisting mainly on oatmeal. Sugar and tea may be dispensed with in extreme cases; but salt is required to season or preserve an endless variety of articles of food. It is not too much to say that among the chief articles o food consumed by the majority of the population of this Dominion, a prominent place must be assigned to fish and pork, both of which owe their preservation to salt.

It may safely be laid down as a maxim that the prime necessaries of existence—that which forms the indispensible aliment, or any adjunct to that aliment, of the poorest portion of the great mass of the population—should be free from taxation. It was in obedience to this principle that the corn duty, which was justly stigmatized as an odious bread-tax, was repealed by Sir Robert Peel. In levying taxes, it is the duty of the Government to avoid striking at the great sources of the people's existence. Very recently the Parliament at Ottawa committed the error of putting a duty on foreign flour. This tax was in effect, though not in form, a discrimination against American flour. The object was to compel the Nova Scotians to eat Canadian flour, at an enhanced cost, which they could not afford to pay. The circumstance of the fishermen of that Province passing through a cruel famine, almost immediately after this unwise and unjust duty was put on, showed in a striking manner the inhumanity of that piece of protectionist legislation which attainted the people in the very source of their existence. We need not add that this temporary bread-tax, after bringing discredit on all concerned, was repealed on the first opportunity.

Are we now to shift the burthen which we removed from one shoulder of the Nova Scotia fishermen to the other? Having repealed the duty on their flour, are we to lay it on the salt that preserves their fish? Both articles of food are equally necessary to their existence; and we might just as well have left the tax on their bread as turn round, after taking it off, and put it on their fish.

The proposed tax on imported salt is advocated on grounds which are altogether indefensible. We are told that the new salt interest has some sort of a claim to be defended against the competition of American salt. The advocates of the duty tell us that they do not desire to go beyond this. They do not even wish to tax English salt. They ask simply and solely that a duty be placed on American salt; and we are not sure but they would agree to confine it to the dreaded Syracuse product. This demand shows an extraordinary unacquaintance with the fundamental laws by which the action of the Ottawa Parliament is limited and controlled. It is not within the competence of that Parliament to levy a discriminating duty, even in favor of English productions. The Governor General's instructions always contain a special prohibition against the enactment of such a duty. Thus the way to a realization of object of the salt duty agitators is effect barred.

There are other parts of the subject these petitioners do not appear to have st to better advantage. They mistake might be the natural effects of compe for remote, unusual and abnormal c They tell us, as if it were something ordinary, that Syracuse salt is sold ch in Canada when it comes into compe with the Goderich product than when competition is withdrawn. What natural? It is the result of an ordinary But even if there is something more, does not alter the case, in favor of the tioners. It is quite possible that the ense salt interest may make a special eff retain a footing in this market. There we believe, two separate companies; o gaged in the manufacture and the otl the distribution of the Syracuse salt. mercantile company agrees to take a salt the manufacturing company pro at a price agreed upon. In case of exc production, which may easily occur, would be great difficulty in disposing surplus; and it requires no stretch imagination to conceive that Canada enjoy its full share of the benefit cheapened article. Salt is a thing of the consumption has fixed limits, whi not admit of artificial extension. The n limit once overstepped in productio price inevitably comes down. But t always an advantage to the cons The Goderich men may or may not jeopardized their capital. We hope their attempts to develop and utilize a source of wealth to the country are des of every legitimate aid.

But is aid of any kind required in or the successful development of the Go salt territory? The following is an est of the cost of manufacturing 100 bar salt at Goderich, obtained from a facturer there:

16 cords wood at $2	$
Labor	
100 barrels (empty) at 30c	
Cartage to wharf or railroad	
Oil and sundries	
Total	$

Or 88 cents per barrel. American sold in Goderich at $1.30, so that ther margin for interest on investment and of 42 cents per barrel, or nearly cent. Such a margin ought to be satisf

The arguments adduced in favor o taliatory tariff come half a century t to find favor where economical qu have been carefully studied, with a the honest application of correct prin

ese arguments, if they mean anything, an a return to that never ending war of iffs which, leading to the marshaling of tile armies, has so often drenched the th with blood and blighted the best hopes human progress. Sir Robert Peel deter- ned to apply the true principle, long ght by the economists, that it was the y and the interest of England to do right, leave other nations to their own choice. he question raised by this salt interest y be reduced to a very simple form: Are the salt consumers to be taxed for the cial benefit of the Goderich salt raisers? he country to pay so much the more for salt that these few individuals may put idends in their pockets? Why cannot we, his Dominion, produce salt that will suc- fully compete with Syracuse salt? We e the great advantage of untaxed labor and aper means of subsistence; of proximity to ket and consequent reduced cost of car- e; of a first-rate if not an altogether su- or article. Everything is in our favor. y, then, can we not compete? It is too h to expect any one to believe that the acuse salt men will always continue to favor with their salt at a price that does not r the cost of production, and if they did the profit would be on our side. There o reason to despair. If our salt works skilfully, prudently and economically aged, there is no reason to fear for their nate success; and that success will be all more certain and enduring that it rests sound foundation.

THE AGRICULTURAL MUTUAL.

ne Agricultural Mutual Assurance Asso- on is, we believe, the leading Company s class in the Province of Ontario. It has assets amounting to $48,652 92, and pre- n notes liable to assessment $138,831 17; ash income, (less commissions) for the year was $61,395.38, and its expenditure 4221. Policies to the number of 11,526 issued, 8,571 on the cash and 2,955 on premium note system. The Directors ef with evident pride to their $25,000 in- nent in Dominion Stock, under the In- nce Act, and we see for the first time in port of a Canadian Insurance Company, timate of the amount required to re- e outstanding risks. Although we are ed to think the sum mentioned, $65,000, low estimate, we hope other Companies ollow the example of the Agricultural ual and, at least, recognize the existence iability which they have hitherto at- ted to ignore. There are other matters is excellent report which suggest com- , such as the need of official investiga- tion, in cases of fire and the abrogation of the two-thirds rule, but the crowded state of our columns compels us to defer further remarks. The financial condition of the Company, and its success in business, exhibit great care in underwriting and general good management.

NOVA SCOTIA GOLD MINING.

Our readers will not fail to observe the valuable information respecting gold mining in Nova Scotia furnished by our Halifax correspondent. The official returns of the various mining districts, compiled specially for this journal, by A. Heatherington, Esq., late editor of the *Mining Gazette*, will be found useful by those interested in that region. — These returns, by the way, we publish in advance of every other journal in the Dominion. The Nova Scotia mining interest has become so large that we deemed it advisable to secure the services of a competent correspondent to chronicle operations in Nova Scotia, and we think that our readers will agree that success has crowned our efforts. A great deal of money here sought investment in that gold region. At the last Session of the Legislature of that Province about thirty companies were incorporated. Various localities have furnished money for these enterprizes. There are Montreal, Kingston, Coburg, Toronto, Hamilton, Chicago, Hartford, Boston and New York Companies, all engaged in gold mining. Toronto, alone, is the head-quarters of five or six chartered, or about to be, chartered, companies. So that a considerable number of persons had a direct interest in being fully informed as to what is going on down there. We hope to number all these companies, and their stockholders, among our list of subscribers.

REPORT OF THE SECRETARY OF THE BOSTON BOARD OF TRADE FOR 1868.

We are indebted to a friend for a copy of the very interesting report of the Secretary of the Boston Board of Trade, Hamilton H. Hill, Esq. He discusses very fully the various subjects affecting the trade and prosperity of Boston;—railway communication, harbour improvements, finance, the shipping interest, &c. The repeal of the Reciprocity Treaty was initiated by a Boston man, and under the influence of temporary hostility to Britain and British Colonists. The feeling has passed away, but the measures adopted and their consequences remain; and it will take many years of agitation and of intelligent enterprise before Boston will be able to regain the customers against whom she closed her warehouses. It is possible that she may never again occupy the position she once held as the emporium for the trade of the Maritime Provinces of the Dominion; for New York, like Aaron's rod, seems to have the faculty of swallowing up its lesser rivals, and in trade, as well as in every-day life, the scriptural aphorism is singularly true—"To him that hath shall be given." The Boston Board of Trade is fortunate in having so able a Secretary. Mr. Hill refers to the National Board of Trade, whose first report is before us. Our neighbors have set us a good example by combining the various Chambers of Commerce into a National Board. Mr. Hill, under the head of "Steam Communication with Europe," says:—

"We believe that the rule holds good, that vessels will always go wherever there is likely to be an accumulation of freight. New York has been made the port of destination for ten or twelve foreign steamship lines, because it is known that there will always be more or less business there for them. Portland and Baltimore have been able to draw similar lines to themselves, because the policy of the Grand Trunk and Baltimore and Ohio Railroads has been able to make it possible for their merchants to engage in the export trade. The Cunard Company despatches a steamer once a week (which will hereafter carry a mail), from Liverpool to Boston, sending it to New York for its return cargo; and there can be little doubt that this line will return from here to Liverpool direct, as soon as the freight shall be forthcoming."

IS IT TRUE?

Rumour has been whispering for some time that Vanderbilt has become the purchaser of the old plans of the Southern Railway at $120,000 or $130,000. Is this true? It has been further stated that he has made an offer—some $15,000 more—for the new charter for this line granted by the Legislature of Ontario, but that he did not succeed in this particular, the holders believing there was more money in it. There seems to be little doubt that Mr. Vanderbilt has attempted to obtain control over this project. What is the object? Is it to build the road, or to kill it off?

There is still some doubt about the precise extent of the loss recently sustained by the Bank of Montreal in New York. It is certain, however, that in one instance the loss was $60,000, and it arose in this way. The bank makes advances on Government securities, and one person with whom it had done business for a great number of years, stepped in one day and gave a cheque for $60,000 and took up his securities. The cheque was not marked good, and next morning when the cash was asked for it, the drawer was found to be bankrupt. Whether there were any other losses than this is still a matter of doubt and conjecture which ought to be re-

moved by an authorized statement, for the uncertainty gives a wide latitude to the imagination, and probably causes exaggerated reports to obtain some credence.

The Ottawa Government promises a Banking Bill that will be satisfactory both to the banks and Parliament. We doubt it, and still more that it will be satisfactory to the people; if, as generally believed, its main feature should make Government notes the unique currency of the country—thus threatening the future advent of an irredeemable currency, of which the value would constantly fluctuate from day to day.

—The Municipal Council of Hastings has granted a sum of money to establish a chair of mineralogy and agricultural chemistry in Albert College, at Bellville, and we are glad to learn that Mr. James T. Bell has been appointed its first occupant.

—The *Globe* states that the tenders for Canada Landed Credit forfeited stock came up to the market rate. The actual rate was about 43 on the amount paid up on each share, instead of 73, the market rate.

Provincial Insurance Company.—The Manager and Assistant Manager of this Company are at loggerheads. The latter having preferred charges of mismanagement and incompetency against the former, the Board of Directors appointed a committee to inquire into the matter. Evidence was taken on both sides and the decision arrived at was to advise the belligerents to settle their little differences and attend to their work. It is stated that the Board, or some of its members, have expressed a willingness to give the Manager a pension of $1,200 a year if he will retire. This proposition has not, however, been accepted. However advantageous it might prove, its legality is very questionable. The salary is $2,400, and a bonus of 2½ per cent. on profits, making the position of Manager of the Provincial Insurance Company worth at least $3,200 a year. This Company is certainly liberal to its Manager.

Communications.

LIFE INSURANCE.

To the Editor of the Monetary Times.

Sir,—In your issue of the 11th February is an article upon "The Crime of False Pretence in Life Insurance," taken from a Western journal, and immediately following it another, which furnishes a striking illustration of the first. A statement of figures is there given, attributed to Mr. Ramsay, of the Canada Life Insurance Company, to the effect that eight American life companies doing business here possess assets averaging only $8.44 for each $100 assured, while the Canada has $18.70 for every $100 assured.

I had previously seen a circular to the above effect, over the name of a newly-appointed agent of the Canada, and had attributed its publication and use in canvassing to his ignorance of the business; but when it appears in your journal as coming from Mr. Ramsay, it assumes quite a different character. That gentleman cannot but know that the statement, correct enough in its proper place, is to the last degree deceptive and false when placed before the public as a means of influencing business. * * * * *

The general public do not know, but every well-informed insurance agent must, that the soundness and strength of an insurance company cannot be determined by any comparison of its assets with the face of its policies, irrespective of the age and terms of those policies. A company having $10,000,000 assured on the ten-year endowment plan, and only $5,000,000 on the whole life plan, must show an amount of assets for each $100 very different from another company having the same amount insured, but on the whole life plan exclusively. Suppose each policy to have paid two premiums: the first company would then have to possess $12 of assets for each $100 assured, but the second company would be a much stronger one if it had only $3 for each $100 assured.

Another illustration, more applicable to the case. Suppose two life companies, each about twenty years in business. One of them may have assured pretty much the same amount from year to year from the first, thus making comparatively slow progress in increasing its business. From assuring an average of say $200,000 per annum during the first five years, it may have grown to an average of $400,000 during the last five years. The other company, from an annual average of $500,000, now averages say $40,000,000. It is manifest that the *new* and the *old* business on the books of the two companies respectively bear a very different relation to each other. No. 1 company will probably have received, and be required to account for, an average of ten premiums on each policy, while No. 2 will probably have received, on the average, only four or five. The policy-holders of No. 1 would be insecure with anything short of from $20 to $25 for each $100 assured, while those of No. 2 would be quite safe with from $6 to $8.

As an instance of slow growth, and necessarily large assets ($17) for each $100 insured, take the "State," of Worcester, Mass., which has spent twenty-two years in getting $5,138,711 on its books; and as an instance of more energetic management, take the "Knickerbocker," of New York, which has consumed but fourteen years in assuring $44,270,805, and whose assets for each $100 assured are only about $6.50. And yet, unless the Massachusetts Commissioner greatly misleads the public, the "Knickerbocker's" assets are, proportionately to its liability, far greater than the "State's," being $114.22, while the "State's" assets figure at $107.75.

If I correctly understand the design of Mr. Ramsay's figures, he would have his agents and the public believe that in all the above cases each company ought to possess about the same amount of assets for each $100 assured; that the companies possessing the largest ratios are the best and safest, and that others should be avoided!

A word as to notes. Every one will admit that a note is a better security than a book account. How particularly Mr. Ramsay informs the public that "*more* than one-tenth" of a certain company's assets are in notes; and how blank is the space opposite his own company's name, though it has a large amount loaned in the same manner, but devoid of the security and accuracy afforded by a premium note. It is singular how people with beams in their eyes can so clearly discover motes in the eyes of their neighbors.

No figures can be presented to the public giving a single view of the respective companies, that will afford a perfectly accurate test of their good standing. The table presented on page 88 of the last Massachusetts Report, however, furnishes the best index procurable. All of the eight companies whose names Mr. Ramsay uses so freely, submit their affairs *annually* to an official valuation by the Massachusetts Insurance Commissioner, and the result is obtainable at a trifling cost. The table above alluded to shows the nett assets and the nett liabilities, and gives the ratios of the one to the other for each company during 1865, 1866, and 1867. If the Canada Life would submit its accounts, in like manner, to an official *annual valuation*, the public could get a bet idea of its standing than by the ridiculous ex bition it makes of "assets for each $100 insure What is the proportion of its *present* assets to *present* liabilities? The last report of the Can only showed its liabilities, as valued by some vate individual employed by the company, they stood four years ago!

The following table is from page 88 of the M sachusetts Report, and shows the standing, clusive of capital stock, of the eight Ameri companies referred to, on the 1st of Janu 1868:—

	Ratio of Assets for each $ of present liability.		
Companies.	1865.	1866.	18
Ætna	$118 86	$120 97	$122
Atlantic	.....	129 64	99
Connecticut	144 30	145 03	141
Equitable	100 98	114 22	105
New York	125 28	129 65	115
Phœnix	117 38	120 27	122
Travellers'	.....	149 86	123
Union	124 44	121 67	121

The Atlantic, being a new company, appear little below par in the above comparison; bu possesses a large guarantee capital, making ratio, with capital, $169.58. The ratios of s of the other companies would be affected sligh by including their capital stock, but a really vent company can always retire its capital un paired. The Connecticut, the Phœnix, and Union appear to better advantage than they wo had they made dividends earlier than four y from the date of their policies, as all the otl have done. The main point, however, is, by an independent governmental investigat all are shown to have large balances on the r side of the ledger. Can Mr. Ramsay furnish figures corresponding to the above for thes any other years?

As to low rates, of which a special poin made, all insurance men know that when a c pany lowers its rates, it correspondingly lo its security, and renders its ultimate solve more or less doubtful. To adopt rates abou per cent lower than either the oldest and strong or the youngest and most reckless of Englis American companies presume to venture upo left to the Canada alone! It would be fairly titled to the glory were its capital adequate to risk; but where institutions with million surplus funds and wide experience stand back is to be regretted that any ordinary set of c talists should make Canada the exclusive fiel which to try so hazardous an experiment.

I enclose my card, Mr. Editor, and remain

Truly yours, W

Montreal, Feb. 27, 1869.

REDUCED RATES AND OVER INSURAN

Editor of the Canadian Monetary Times.

Dear Sir.—An "Agent" in one of your re numbers complains that some Companies cutting down fire rates and that the tariff dead letter. I am glad to say it is, for it was of errors, and was only valuable as to giving construction and locality of buildings. Now to rates; I am convinced that it is not always highest rate that pays a company the best, the care displayed by an Agent in the selec of risks, is much more important; first, by taining the character and standing of the p owning or occupying the property; next, tha those by whom the property is endangered, by carefully explaining to the person that he only insure two-thirds of the actual value; being his own insurer for the other one-third am aware that this is often not done, as I l frequently been told "such a company will any amount I will give them." The reply very simple one, "they may take your premi but would not pay you more than your los two-thirds of the value." For instance, if

sh value of a property is $4,000, no company ill pay more than $2,667. I am satisfied that these precautions were taken, many fires might e avoided. I could mention several fires in this ty within the last twelve months, where the operty was largely over insured. Insurance siness, like every other mercantile transaction, ust be based upon careful and prudential prinples, and I am sure my commercial friends will ar me out in saying that it is not by the apparent high rate of profits upon any business ansaction, but the uniform care with which the stomers are selected that success depends, and hat the most successful business men are those ho, content with a moderate profit, will only ve dealings with reliable parties, and not with ose who do not care whether they fail or not, or hat price they pay for goods; so with insurance, man doing an unprofitable trade will often let e property burn if he sees it to his advantage, d cares little for the rate he pays. A serious awback to placing insurance upon a legitimate oting is the anxiety of some companies to obtain sks upon any terms and the employment of perons not connected with the office to canvass. any of those men never expect to get more than eir first commission, and consequently care little to the character of risk taken.

I remain, dear sir, yours truly,

INSURANCE.

Toronto, Feb. 27, 1869.

Commercial.

Montreal Correspondence.

(From our own Correspondent).

Montreal, March 1, 1869.

I write to you a day in advance of my usual me as the mails are so uncertain, the train from ur city which left on Saturday morning not ving arrived, and the English mail from Portnd which arrived there on Friday is not expected ll some time to-morrow. From this you can agine the state of blockade we are in; the untry roads are impassable. This state of isolaon has caused a dullness in every branch of ade, and as there seems no prospect of an imovement for some days to come, we must look rward to continued dullness. There is some lk in town of getting up a new branch of Comerce, viz., shipping ice to the East and West dies. The idea is very feasible. At Longeuil rge ice warehouses could be erected at slight st, the site of the old Grand Trunk sheds could had cheap, and the wharf could be put in repair a moderate rate; the water is deep enough to ad vessels of moderate tonnage, such as would required for the trade, and the ice is on the ot only requiring cutting and warehousing. The estion then arises why should not Canada be le to compete in this business with Boston, hich has to draw her supplies from inland lakes me of which are over 70 miles distant.

Produce.—I have to report an exceedingly iet market and prices purely nominal. Notthstanding the stoppage of trains the supply flour is fully ample for our own local wants, d as the European markets are dull, and it is a ll known fact that should a favorable turn take ace in them, there is plenty of stuff ready for ipment at the leading exporting ports, the ndency naturally is to a feeling of quietness. e rapidity of telegraphic reports between this ntinent and the Old World has had the effect placing the markets of America and Europe on e basis, and operators know their chances almost positively as between this and your city.

In provisions there has been a falling off in the ce of pork, and dressed hogs would not bring er $10.25 for heavy weights. I cannot account this decline as the stocks in the country are t heavy and prices in the West are firm. Cattle ve not sold briskly as the butchers are fairly supplied. For butter a fair inquiry has recently sprung up, for the States and extra qualities have been picked up at full rates, the stock here is light. Lard is very active and scarce.

Groceries.—The only movement of consequence in the market is in Sugars and Molasses; a steady advance has occurred in raw and refined Sugars and also in Molasses. Cuba Sugar is held at 10¼c, Barbadoes 10¼c., Porto Rico 10⅝ to 11c., and holders are not anxious sellers, at these rates. For Molasses, Centrifugal have reached 32½ to 35c. Clayed 35 to 37½c. The market closes firm at extreme rates. Tobacco, Montreal manufactured, is in good demand, and our manufactories are fully employed. Teas and other staples are very quiet.

Iron and Hardware.—Business is dull, owing chiefly to the blocking up of the country roads. There is no change in prices, with the exception of Tin Plates, which have advanced fully 50c. per box; this is owing to the rise in England.

Toronto Market.

There is little change in the state of the market since last week. A fair business is being done in Groceries at steady prices. In Dry Goods, Boots and Shoes, etc., preparations are being made for the spring trade.

Petroleum.—We are glad to learn that there is some inquiry from Germany for Canadian oil. It is expected that a considerable export trade with Europe will ensue.

Grain.—*Wheat* — Receipts by cars, 14,940 bush., and 26,000 bush. last week. The market continues dull. Spring is steady, holders asking 96c to 97c ; very little offering, and no late sales. Fall is dull, and offering at 98c to $1.00, but there is little demand ; a few cars sold during the week at $98c to $1.00. *Barley*—Receipts, 624 bush., and 2,000 bush. last week. There are a number of small lots offering at $1.31 to $1.33, and on the street the latter price was paid. *Pease*—Receipts light ; on the street, 80c to 83c is paid, and these figures are asked for car-loads, but the demand is slack, and the general quality inferior ; no sales. *Oats*—Receipts 2,600 bush., and 600 bush. last week. The market is dull ; car-loads are offering at 50c to 51c, with little enquiry. *Seeds*—Timothy is quiet at $2.25 to $2.50 ; Clover is selling in small lots at $6.85 to $7.10 for good to prime seed ; Flax $2. *White Beans*—A considerable business has been done in car-loads within a recent period ; they are now worth $1.75 to $2.15 per bushel.

Flour.—Receipts, 2,200 barrels, and 2,389 last week. Some business was done in No. 1 Superfine at $4.00 to $4;10, the market closing with sellers at $4.10, and buyers of round lots at $4.00. Sales : 100 barrels at $4.10 in store ; 100 barrels at same price, free of winter storage ; 200 barrels at $4.05 in store ; 200 barrels at $4.00 at a point west ; and 100 barrels at $4.00 free in cars. Extra—Very little doing ; a lot of 500 barrels reported sold on p.t., supposed to be about $4.50. Nothing doing in other grades. *Oatmeal*—There are buyers of 100 barrel lots at $5.60; no sellers.

Freights.—Rates by Grand Trunk Railway:—Flour to all stations from Belleville to Lynn, inclusive, 35c., grain per 100 lbs. 18c. ; flour to Brockville and Cornwall, inclusive, 43c. grain 22c. flour to Montreal 50c. grain 25c. ; flour to all stations between Island Pond and Portland, inclusive, 85c. grain 43c. ; flour to Boston 90c., gold, grain 45c. ; flour to Halifax $1.10, grain 55c; flour to St. John $1 02. Boxed Meats to Liverpool per gross ton 80s. ; lard or butter in tinnets 85s. ; Pork 11s. per tierce ; flour 5s. 6d. per barrel ; grain 12s. per 480 pounds. Rates by Great Western Railway—Flour, Toronto to Suspension Bridge 25c. gold ; thence to New York, 92c. U. S. currency per bbl. ; to Boston $1.02. Grain to Bridge 13c., gold; thence to New York 47c, U. S. currency; to Boston 51c. Grain, Toronto to Detroit, 18c. per 100 lbs; flour 35c per bbl.

Trade of Montreal.

The following is a summary of the import and export trade of Montreal in 1868:

Total value of imports to Dec. 31, 1868	$22,919,197
Total value of imports to Dec. 31, 1867	28,378,117
Decrease	$5,458,920

This decrease is caused more by the falling off in the value than any decrease in the quantities. The same holds good of the customs' duties, which were :

1864	$3,963,992	1867	$4,318,875
1865	3,378,686	1868	3,540,604
1866	4,646,783		

Showing a falling off of nearly one million dollars as compared with 1867.

In the *export trade* the Custom House returns in the face of these shew a considerable increase, being :

Exports 1st Jan. to 31st Dec., 1868	$16,898,554
Exports 1st Jan. to 31st Dec., 1867	15,444,745
Increase	$1,453,809

But this excess disappears when we deduct the great increase in the amount of silver exported, which was in

1868	$2,339,260
1867	91,767
Increase	$2,247,493

Deducting this specie from the whole exportation of 1868, we have a falling off in merchandise of $793,684. The chief falling off is in wheat, which is $650,000. There is also a falling off in the exportation of barley, oats and peas, and a further cause is to be found in the depreciated value of flour and oatmeal, to the extent of nearly $1,500,000. On the other hand there has been a considerable increase in minerals, live stock and manufactures :

1868—Minerals	$239,988
1867—Minerals	95,686
Increase	$144,301
1868—Fish	$84,085
1867—Fish	15,831
Increase	$68,254
1868—Horses, butter, pork, etc	$4,218,518
1867—Horses, butter, pork, etc	2,858,830
Increase	$1,269,688
1868—Manufactures	$756,273
1867—Manufactures	499,405
Increase	$256,868

The Petroleum Trade.

The Titusville *Herald*, in its review of the oil business for the month of January, says, touching

The Production.—"The mild weather that prevailed during nearly the whole of the period under review, allowing the whole to be worked almost as in the summer season, and the finding of several moderately productive wells, have had the effect of slightly enlarging the production. The average daily yield for the month was 10,192 barrels of 43 gallons each, an increase of about 450 barrels per day from the average for December. But very little addition was made to the product by the starting up of old or abandoned wells of small producing capacities, and from torpedoing and other means of resuscitating wells, the increase was on the whole comparatively inconsiderable. Near the confluence of Lower Cherry Run with Oil Creek, on Clarley run, near Oil City, on Bull Run and in the Pleasantville district, eight wells were struck, the yields of which ranged from 50 to 125 barrels per day. Other wells, with less important producing capacities, were found in different parts of the region. From the

last named district the shipments to Titusville, Pithole and Miller by two pipe transportation lines and to Titusville by teams during the month, reached an aggregate of 76,000 barrels, but as the stock at the wells was reduced 9,000 barrels, the total product for the month was 67,000 barrels—an average for 31 days of 2,161 barrels. The production of Church Run and the wells in the immediate vicinity by the receipts by pipe line and teams at Titusville, and the difference in stocks, reached an average of 500 barrels per day for the month.

"The following table shows the total production for January, and the average per day :

Total shipment of crude for January of barrels, of 45 gallons each.....brls.		292,965
Add to reduce to brls. of 43 gals. each.....	"	13,626
Total shipment of brls. of 43 galls. each.....	"	306,591

		9,362
Total production during January .....brls.		315,953
Average per day for 31 days .....brls.		10,192

"*The Development and the Territory.*—The development has not been attended by the finding of new deposits of petroleum, nor have any large producing wells been struck, but yet it is considered satisfactory, as a large proportion of the wells completed produce in paying quantities, and very valuable additions have been made to the territory on the outskirts of the districts that were producing at and previous to the publication of our last report. The total number of wells completed during the month was about 53, of which 35 were located in Pleasantville District, one at Tidioute, and of the remaining 17 most were located along Oil Creek, at Shamburg and near Oil City—only three having been completed along the River of Reno. Of the 53 wells completed, fully 42 and possibly more, from all appearances, proved pecuniarily successful. The most important feature connected with the development, is the large decrease in the number of wells being drilled. The total number on February 1st was 341, against 373 on the 1st of the previous month—decrease of 32. This decrease was caused principally by a large number of wells being completed, as 21 new wells were commenced during the month. The territory in the vicinity of Church Run, which was scarcely thought of for a year previous to January 1st, is again attracting attention, and several farms in its vicinity have been secured and leases have been given on them. In all other productive parts of the region the demand for territory is good, but this is particularly the case in regard to certain tracts at the northern and southern termini of the Pleasantville District, on Lower Cherry Run, on Charley Run, and at Parker's Landing on the Allegheny River. At the latter place we learn that operations have been commenced on ten leases, and six or seven wells are being drilled. The largest yield from one well is 25 barrels per day. This district is about fifty miles south of Titusville."

Halifax Market.

Breadstuffs.—Feb. 16—We have to report a continued dullness in Flours for the past week.—The demand which is entirely for the better description of supers is a small local one and quotations are purely nominal, lower prices having been accepted. We quote white wheat extra (fall) $7.25 ; fancy $6.50 to $6.60 ; bakers' strong $6.30 to $6.40 ; super. $5.90 to $6.00 ; No. 2 $5.00 to $5.50 ; middlings $4.25 to $4.50 ; Pollard's $4.25 to $4.35. Rye $5.00. Oatmeal $7.50 to $7.60. Cornmeal K. D. $4.25 to $4.40 ; F. G. $4.10 to $4.25.

Provisions.—Pork is held at higher figures without enquiry. At auction yesterday P. E. I. realized $21.00 to $18.00 cash, for mess and prime respectively ; the lots were rather indifferent.

West India Produce.—Sugars are in request at higher rates with small receipts. Molasses inactive at former quotations. Rum tends downwards, 55c. has been accepted for round lots of Demerara. Coffee continues dull. Sugar V. P. 9⅜c. ; Porto Rico 8½ to 8¾c ; Cuba 8½c ; Barbadoes 8¼ ; Coffee—Jamaica 13 to 15c ; St. Domingo 10 to 12c.

Fish and Oil.—Are still active and improved. We quote :—Codfish (large shore) $4.50 to $5.00 ; small $3.60 to $3.70 ; Mackarel No. 1 (L.) $18.00 ; No. 2 (L.) $15.00 ; No. 3 $11.00. Herring, shore (split) $4.50 ; round $3.25 to $3.50.

Driving Away Commerce.

How excessive taxation results in the reverse of that contemplated is being realized in England. The establishment of lines of steamers between Havre and the United States has had the effect of depriving sailing vessels, which carry American products to France, of return cargoes; and the custom has been to cross the Channel to a British port, chiefly Newport and Cardiff, for return cargoes, generally of railroad iron and coal. It has been found, however, that the expense of shipping these cargoes owing to the heavy British port charges, pilotage, light dues, brokerage, &c., is so onerous as, added to the expense at the French port of discharge, to eat up the profit on the return freight. To remedy this, one or two British companies at Havre are procuring from England cargoes of iron for transhipment to vessels wanting freight to the States. Two steamers lately arrived at Havre with cargoes of rails for the American ships "Halcyon" and "Lady Blessington," both bound to New Orleans, and others were expected to follow shortly. If the undertaking succeeds—and there is a good prospect for it—Havre will become the depot for British goods destined for American and other ports, and vessels that hitherto resorted to the United Kingdom for return freights will procure them at Havre instead. This new phase in the British carrying trade is not at all relished by the business people at the places so seriously affected, and they loudly denounce a suicidal policy, which induces British subjects to assist in extending the trade of foreign ports at the expense of their own—a policy which British shipowners have so long and loudly complained of. If produce can be taken from England to Havre, and then transhipped to a foreign port on better terms for the ship than when shipped in England, it shows that the maritime laws of the latter country are behind the age, and the fact contains a warning which British lawmakers will do well not to neglect, if they desire the prosperity of such an important industry.

INTERCOLONIAL RAILWAY.

THE Commissioners appointed to construct the Intercolonial Railway give notice that they are now prepared to receive TENDERS for THREE FURTHER SECTIONS of the line.

Section No. 5 will be in the Province of Quebec and will extend from forty miles East of Riviere du Loup, at the end of Contract No. 2, to the Sixty-sixth Mile Post, near Rimouski, a distance of about Twenty-six miles.

Section No. 6 will be in the Province of New Brunswick, and will extend from the Easterly end of Contract No. 3, opposite Dalhousie to the West side of the Main Post Road near the 48th Mile Post, Easterly from Jacquet River, about Twenty-one miles.

Section No. 7 will be in the Province of Nova Scotia and will extend from the Southerly end of Contract No. 4, near River Phillip, to Station Fifty at Folly Lake, about Twenty-four miles.

Plans and profiles with specifications and plans of contract will be exhibited at the office of the Board of Works, Toronto, and at the offices of the Commissioners at Ottawa, Rimouski, Dalhousie, St. John, and Halifax, on and after the FIFTH day of March, 1869, and SEALED TENDERS, addressed to the Commissioners of the Intercolonial Railway, and marked "Tender," will be received at their office in Ottawa up to SEVEN o'clock, p. m., on the TWENTY-NINTH day of MARCH, 1869.

A. WALSH,
ED. B CHANDLER,
C. J. BRYDGES,
W. F. COFFIN,
Commissioners.

THE CONNECTICUT MUTUAL

LIFE INSURANCE COMPANY,

HARTFORD, CONNECTICUT.

WOODBRIDGE S. OLMSTEAD, SECRETARY,
EDWIN W. BRYANT, ACTUARY,

GUY. R. PHELPS, PRESIDENT,
ZEPHANIAH PRESTON, VICE PRESIDENT.

LUCIAN S. WILCOX, MEDICAL EXAMINER.

Organized in 1846. Charter Perpetual.

The Largest Mutual Life Insurance Company. Numbering Over 75,000 Members.

BEING A PURELY MUTUAL COMPANY ITS ASSETS BELONG EXCLUSIVELY TO ITS MEMBERS,

ASSETS, $21,000,000.—Acquired by prudent and economical management of twenty-two years, without the aid of a single dollar of original capital.

SURPLUS ASSETS, $6,361,967—All profits divided among the members. Each policy holder is a member. There are no stockholders.

ITS DIVIDENDS—Have averaged over 50 per cent. annually. Total amount of dividends paid the members since its organization, $4,397,142.

ITS SUCCESS UNPARALLELED—It has arrived at the extraordinary condition where the income from annual interest alone is more than sufficient to pay all the losses. Total amount of losses paid by the Company, $6,863,528.

ITS RESPONSIBILITY—For every $100 of liabilities it has $154 of assets.

LAST YEAR'S PROSPEROUS BUSINESS.

Amount insured fiscal year, 1867 .....$45,647,191 00 | Income received fiscal year, 1867.....$7,530,886 19

During its last fiscal year this Company paid to its living members, and to the families of deceased member nearly $2,000,000, and at the same time added more than four millions to its accumulated capital.

The whole record of this Company has been one of prudent management and prosperous advancement. Among the older and leading Life Insurance Companies its average ratio of expenses to income has, through its entire history, been the lowest of any.

ITS LIBERALITY—It accommodates the insured by giving credit for part premium, and grants insurance to meet all the contingencies and wants to which Life Insurance is applicable.

It issues policies on a single life from $100 to $25,000.

MEDICAL REFEREES—J. WIDMER ROLPH, M.D.; H. H. WRIGHT, M.D.

OFFICE - - - - - - No. 90 King Street East, Toronto.

J. D. FEE, AGENT, TORONTO.
Toronto, December 24, 1868.

DANIEL L. SILLS, GENERAL MANAGER FOR CANADA.
12-1y

LIFE ASSOCIATION OF SCOTLAND.

Invested Funds Upwards of £1,000,000 Sterling.

THIS Institution differs from other Life Offices, in that the BONUSES FROM PROFITS are applied on a special system for the Policy-holder's personal benefit and enjoyment during his own lifetime, with the option of large bonus additions to the sum assured. The Policy-holder thus obtains a large reduction of present outlay, or a provision for old age of a most important amount in one cash payment, or a life annuity, without any expense or outlay whatever beyond the ordinary Assurance Premium for the Sum Assured, which remains intact for Policy-holders' heirs, or other purposes.

CANADA—MONTREAL—PLACE D'ARMES.

THE

EUROPEAN MAIL

FOR

NOR H AMERICA.

WIT[illegible] HICH IS INCORPORATED

WI R ITH'S EUROPEAN TIMES."

blished in 1843.)

A FUL[illegible] COMPLETE SUMMARY OF

H & FOREIGN NEWS

PUBLISHED WEEKLY

FOR DESPATCH BY THE MAIL STEAMER.

THE EUROPEAN MAIL

For North America, with which is incorporated 'Wilmer & Smith's European Times,' is published in the interest of the mercantile and general community.

In each issue is to be found all the reliable information, commercial and general, that can in any way prove of value to our subscribers. The greatest possible care has been, and will continue to be, taken by the Proprietors to obtain, regardless of expense, a faithful record of all market transactions in which our friends are more particularly concerned, up to within three hours of the closing of the Mail.

We furnish our readers with quotations of articles staple not generally noted in ordinary lists, of which the following is an example:—

Articles.	Prices per ton.	Cash discount.
CANADA PLATES		
Staffordshire (in L'pool) f.o.b.	£18 17 6	2½ %
Glamorgan " "	19 15 0	"
GALVANIZED IRON—		
Corrugated Shts., 20 guage fob.	17 0 0	"

The latest shipping intelligence, comprising arrivals, departures, sailings, and loadings, alphabetically arranged, is laid before our subscribers; and the tabular form adopted in the current number will be adhered to throughout—every casualty being regularly noted, and the state of the freight market duly advised.

Agricultural, Legal, and Medical news, of interest is given in detail.

We publish a list of Military and Naval Stations and all changes are promptly noted.

The Proprietors of the EUROPEAN MAIL urge the great advantages of this Journal, and trust for the friendly co-operation of all who think it of importance that the Old and New World should be more closely associated by those reciprocal ties resulting from a mutual furtherance of their material interests.

The subscription is 52s. or $13 (gold) per annum, payable in advance.

THIS Company is established upon strictly Mutual principles, insuring farming and isolated property, (not hazardous,) *in Townships only*, and offers great advantages to insurers, at low rates for *five years*, without the expense of a renewal.

Picton, June 15, 1868. 9-1y

THE AGRICULTURAL

Mutual Assurance Association of Canada.

HEAD OFFICE ..... LONDON, ONT.

A purely Farmers' Company. Licensed by the Government of Canada.

Capital, 1st January, 1869 ..... $230,193 82
Cash and Cash Items, over $86,000 00
No. of Policies in force 30,892 00

THIS Company insures nothing more dangerous than Farm property. Its rates are as low as any well-established Company in the Dominion, and lower than those of a great many. It is largely patronised, and continues to grow in public favor.

For Insurance, apply to any of the Agents or address the Secretary, London, Ontario.

London, 2nd Nov., 1868. 12-1y.

Briton Medical and General Life Association,

with which is united the

BRITANNIA LIFE ASSURANCE COMPANY.

Capital and Invested Funds ..... £750,000 *Sterling.*

ANNUAL INCOME, £220,000 STG. :

Yearly increasing at the rate of £25,000 Sterling.

THE important and peculiar feature originally introduced by this Company, in applying the periodical Bonuses, so as to make Policies payable during life, without any higher rate of premiums being charged, has caused the success of the BRITON MEDICAL AND GENERAL to be almost unparalleled in the history of Life Assurance. *Life Policies on the Profit Scale become payable during the lifetime of the Assured, thus rendering a Policy of Assurance a means of subsistence in old age, as well as a protection for a family*, and a more valuable security to creditors in the event of early death; and effectually meeting the often urged objection, that persons do not themselves reap the benefit of their own prudence and forethought.

No extra charge made to members of Volunteer Corps for services within the British Provinces.

☞ TORONTO AGENCY, 5 KING ST. WEST.

oct17—9-1yr JAMES FRASER, *Agent.*

Insurance.

The Gore District Mutual Fire Insurance Company

GRANTS INSURANCES on all description of Property against Loss or Damage by FIRE. It is the only Mutual Fire Insurance Company which assesses its Policies yearly from their respective dates; and the average yearly cost of insurance in it, for the past three and a half years, has been nearly

TWENTY CENTS IN THE DOLLAR

less than what it would have been in an ordinary Proprietary Company.

J. HUGHES, Inspector.

Etna Fire and Marine Insurance Company, Dublin.

AT a Meeting of the Shareholders of this Company held at Dublin, on the 13th ult., it was agreed that the business of the "ETNA" should be transferred to the "UNITED PORTS AND GENERAL INSURANCE COMPANY." In accordance with this agreement, the business will hereafter be carried on by the latter Company, which assumes and guarantees all the risks and liabilities of the "ETNA."

The Directors have resolved to continue the CANADA BRANCH, and arrangements for resuming FIRE and MARINE business are rapidly approaching completion.

Canada Life Assurance Company.

CAPITAL AND CASH ASSETS

OVER $2,000,000.

SUMS ASSURED

$5,000,000.

A COMPARISON of the rates of this Company with others cannot fail to demonstrate the advantage of the low premiums, which, by the higher returns from investments, it is enabled to offer.

IF PREFERRED, ASSURERS NEED ONLY

PAY ONE-HALF OF EACH YEAR'S PREMIUM IN CASH,

during the whole term of policies on the 10 payment plan or for seven years on the whole life plan.

For the unpaid portion of premiums,

"NOTES" ARE NOT REQUIRED BY THIS COMPANY

so that assurers are not liable to be called upon for payment of these, nor for assessments upon them, as in case of Mutual Companies.

Every facility and advantage which can be afforded is offered by this Company.

Meetings.

BEAVER MUTUAL FIRE INSURANCE ASSOCIATION.

The annual general meeting of the members of this Association was held at the office, 20 Toronto street, on Tuesday, February 9, 1869. The chair was taken by R. L. Denison, Esq., and after the usual routine business, the annual report of the Board of Directors was read by the Secretary, as follows:

Annual Report.

The Board of Directors have much pleasure in laying before the members their usual annual statement of the affairs of this Association, for the year ending November 30, 1868, of which the following is a condensed summary:

Cash receipts	$30,959 74
Cash payments	$32,673 59
No. of policies issued during year	5,283
Am'nt of property covered thereby	$3,931,030 00
Number of policies expired and cancelled	3,561 00
Total number of policies in force November 30, 1868	13,579 00
Total amount of property covered thereby	$9,559,710 00
Number of policies on premium note system	8,175 00
Number of policies on cash system	5,404 00
Average amount covered by each policy	$704 00
Amount of premium notes at same date liable to assessment	$91,681 10
Fire claims (settled and unsettled) during year	$14,918 17

For further details reference may be made to the Treasurer's accounts and Inspector's report, both appended hereto.

The above figures show a gain of 2,183 policies over the number reported last year, with an increase in premium notes of $11,496 62, which facts, taken together, are of great value, as indicating a healthy business, and proving the continued popularity of the Association.

That the receipts from premiums have not increased in a like degree, is due to a reduction in first payments on premium notes, which your Board ordered last spring, their object being to encourage the premium note system, and thus check the too rapid increase of cash policies. They look upon the cash system, when not confined within narrow limits, as defective in principle and unsafe in practice. While some other Mutual Companies seem to be running the cash system altogether, your Board have taken a different course; and they recommend their successors to give a trial, in preference, to the "cash mutual" system, now common in the neighboring States, under which the applicant for insurance pays down a sum sufficient to cover costs of insurance, and to leave also a margin for profits, which profits are either repaid him at the end of the term or credited on his renewal premium when the insurance is continued.

It will be seen that owing to the long summer drought our losses were heavy in July and August, to which must be added a large number of additional claims reported since the close of the financial year, and not included in the present report. Your Board, much to their regret, have found it necessary in consequence to call in a special assessment of one-sixth of all premium notes for policies in force 1st January, 1869, in order to provide in due course for payment of our indebtedness. It is hoped that the current year may prove more auspicious in respect to losses by fire.

A further draft upon last year's income has arisen from the circumstance that we have paid all agents' commissions in full, instead of deferring part payment until another year, as has been the general practice with Mutual Companies. Your Board consider it better to charge all liabilities in the accounts of the year to which they belong.

In obedience to the vote of last annual meeting your Board requested the President to subscribe for one hundred shares of $40 each, in the guarantee stock of the Toronto Mutual Fire Insurance Company, on which the sum of $3,000 has been paid as called for. This investment forms a set-off to the amount received on our own guarantee stock, and provides for the interest payable thereon.

Notwithstanding so many unusual calls upon our funds, the net assets of the Association show a marked improvement as compared with last year, and a balance of no less than $53,000, which forms a reserve fund abundantly sufficient to satisfy the most critical judgment, as to the responsibility and permanency of this Association.

Your Board have under discussion the very important question of an union between this Association and the Company above named—the Toronto Mutual Insurance Company—which devotes itself to the insurance of town and village property chiefly, and they understand that the Board of Directors of that body are ready to meet us thereon. It is proposed to carry on the business of the two offices under one Board, each continuing to exist as a separate branch; and that all accounts, assets and liabilities shall be kept distinct as at present. The chief end to be gained will be economy, which such union will assuredly facilitate; the saving in advertising, printing, stationery, Directors' fees, etc., cannot but be considerable; and financially we may expect to gain strength enough to place us above all ordinary trials, and out of danger of injury from fair business competition. The two companies united would possess not less than $160,000 of premium note capital, and ought to occupy a high position among the Insurance Companies of the Dominion.

Your Board take this occasion to call attention to the case of certain parties, who have put in claims for payment of losses by fire, although they had neglected to give the notice required by law of the existence of encumbrances on their property, created either before or after the date of their application for insurance. Your Board being unwilling to enforce the law too rigidly, have laid it down as a rule in cases where no fraud was apparently intended, to allow one-half of such claim rather than reject them altogether. This liberality has been misunderstood in some localities, parties holding that either the whole claim or none at all ought to be paid. Your Board would suggest, therefore, that in future such claims be paid in exact proportion to the insurable interest of the policy holder in the property insured. That is to say, if the property proves to be encumbered to one-half its value *without notice* to the Association, then the insured shall receive one-half his

claim. If mortgaged to its whole value, he shall receive none at all, and so on; and that if necessary an arbitration be held on the spot to ascertain the true insurable interest of the insured in the property destroyed. A case of this class, which arose in the neighborhood of Barrie, was tried at the Assizes there last year. The plaintiff, who was non-suited on a legal point, had accumulated mortgages on his farm to more than its full value, and even his cattle, grain, etc., were overburthened with chattel mortgages. The property was destroyed by fire under suspicious circumstances, no doubt by an incendiary. Your Board refused payment on several grounds, but mainly because no notice had been given of the excessive encumbrance; because the man had really parted with his interest in the property, both building and stock; and because he had obtained his policy by deceit, after having had a former policy in this Association, on the same property, cancelled for not giving notice of encumbrance and other reasons. It may be well to mention that this is only the third suit brought against this Association since it begun to insure farm property seven years ago, a pretty good proof that the Directors have been influenced by no litigious spirit in settling fire claims.

As a step in the direction of economy, it is recommended that the number of Directors be reduced to 12 instead of 15 as at present. Five directors retire by rotation, namely, Messrs. Blake, Chadwick, Campbell, Collins and Sutherland. One of these, David Campbell, Esq., of Almonte, has recently been removed by death; the others are of course eligible for re-election. Should the number be reduced as above proposed, there will be but two vacancies to be filled, as also one occasioned by the appointment of W. Henderson, Esq., a member of this Board, to the office of Fire Inspector, thus making three vacancies in all. It will be your duty also to appoint suitable persons as Honorary Directors.

All which is respectfully submitted.

R. L. Denison,
President.

S. Thompson,
Managing Director.

February 8, 1869.

The Treasurer's statements, Auditors' report, and Fire Inspector's report were also read.

The Chairman moved the adoption of the report, which, after some discussion, was carried.

A resolution was then carried, giving the Board of Directors full power to carry out an union of this Association with the Toronto Mutual Fire Insurance Company, and to prepare a petition to Parliament, and a Bill to carry out the same.

It was ordered that 14,000 copies of the report be printed for the use of members and other policy holders.

Messrs. Blake, Chadwick and Collins were re-elected Directors.

Messrs. Holland and Pellatt were re-appointed as Auditors, and the following gentlemen were elected Honorary Directors of the Association: W. H. Berry, March; Thomas Bowles, Reeve, Chinguacousy; Hon. George Bryson, M. L. C., Pontiac; James Dryden, Whitby; William Edwards, Clarence; T. Higginson, West Hawkesbury; H. S. Howland, York; Thomas McConkey, M. P., Barrie; J. McDermott, Reeve of Wallace; Hon. J. Simpson, Senator, Bowmanville; Alfred O. Stephens, Tecumseh.

After votes of thanks to the President and other officers, the meeting separated.

The Board of Directors held a meeting immediately afterwards, when Charles E. Chadwick, Esq., of Ingersoll, was elected President, and David Thurston, Esq., of Toronto, Vice-President of the Association.

Statement of Receipts and Expenditure for the year ending November 30, 1868.

LA BANQUE DU PEUPLE.

Pursuant to notice the Annual General Meeting of the Stockholders of this Institution was held on the 1st day of March, 1869, at three o'clock, p.m., at their Banking House, Great St. James street, Montreal.

The meeting having been organized by the appointment of John Crawford, Esq., as Chairman and A. A. Trottier, Esq., as Secretary,

The Chairman called the meeting to order, and which A. M. Delisle, Esq., one of the Auditors read the following report of the Auditors for the past year:—

Gentlemen,—

After having given our most careful attention to the affairs of the Bank, by the examination of its books, papers and securities, we have the honor to report that the result of our labours has proved that they have been managed with the utmost care and regularity.

The various assets, such as debentures, Government bonds, cash on hand, and, in a word, everything comprising the assets of the Bank, have received our careful attention, and the whole found to correspond with the books in which they are represented.

We would observe that, if on the one hand the transactions of the Institution have been comparatively restricted during the past year, and therefore, not so remunerative as they might possibly have been, yet, on the other hand, it will be gratifying to the Shareholders to know that owing to the good management and prudence of the Board of Directors, it has suffered no loss since the last Annual Meeting, of the 2nd May 1868.

We beg to embody a Statement of the affairs of the Bank, as exhibited on the 27th February viz:—

ASSETS.

Amount of discounted notes and other debts due to the Bank, the balance due by other Banks excepted		$1,963,64
Amount of mortgages, hypotheques, and judgments		33,74
Amount of real estate		54,19
Amount of balances due by other banks or bankers		31,22
Amount of specie in silver and gold		135,10
Amount of Provincial notes		34,19
Amount of bank bills and cheques of chartered banks of this Province		34,47
Amount of Government securities		160,36
		$2,446,95

LIABILITIES.

Amount of stock paid up	$1,600,00
Amount of bank notes in circulation	86,17
Amount of deposits not bearing interest	304,22
Amount of deposits bearing interest	244,67
Amount of net profits on hand this day, all expenses deducted	205,80
Amount of balances due to other banks or bankers	1,85
	$2,446,95

In examining this statement you will not fail to remark, that notwithstanding a financial crisis which for a long period, has more or less existed in commercial matters, the want of confidence in public credit, and particularly owing (we regret to state) to the protection afforded to dishonest debtors by the bankruptcy laws of 1864 and 1865, the bank is found to be in such a prosperous condition as can hardly fail to increase the confidence of the stockholders and the public generally.

The decision which has consequently been arrived at by the Board of Directors to declare an annual dividend of 4 p. c. for the last half meets with our unqualified sanction.

We think, that we should fail in our duty if
e did not avail ourselves of this opportunity to
vert to the resignation of Benjamin H. LeMoine,
q., your late cashier so well known for his finan-
l abilities and prudence; but we are happy to
rn that, although relieved of the more respon-
le and onerous duties of cashier, that gentle-
n still continues to give the institution the
nefit of his long experience by exercising a gene-
superintendence over its management.
The balance sheet above quoted, gives the
mount of real estate" held by the Bank at
4,199.01; but it is but fair to mention that this
m is what it originally cost, whereas at the pre-
t time, owing to the increase in value of landed
ate, it is not exaggerating to set its intrinsic
lue at $100,000, beyond its cost, and which
ght properly be added to the rest or profit and
s account.
We have, therefore, great satisfaction in con-
tulating the Stockholders on the uninterrupted
sperity of the Bank, and much pleasure in
ering our thanks to Mr. Trottier, the Cashier,
l the officers of the Bank generally, for the
luable aid extended to us in the performance of
r duties.

A. M. DELISLE,
JOHN OGILVIE.

After which the following resolutions were pro-
ed and unanimously carried.

1st. On motion of Jacques Grenier, Esq., se-
ded by Ephrem Hudon, Esq.:—
Resolved,—That the Report of the Auditors for
e past year, as well as the statement of the affairs
the Bank, be received and adopted.

2nd. On motion of C. J. Coursol, Esq., second-
by A. Dubord, Esq.:—
Resolved,—That the Report of the Auditors and
statement of the affairs of the Bank, just sub-
ted, are very satisfactory; and this meeting
s with much pleasure that the affairs of the
nk continue prosperous; and would express its
nfidence in the Directors of the Bank for their
e management.

3th. On motion of A. M. Delisle, Esq., second-
by Louis Boyer, Esq.:—
That the Shareholders of this Bank consider it
ir duty to offer to Benjamin H. Lemoine, Esq.,
ir late cashier, their warmest acknowledgments
his able and efficient management of the affairs
the Bank, whilst committed to his care, and
ret much that circumstances should have com-
ed him to offer his resignation; but they are
ased to learn that, although that respected gen-
man has ceased to be its first officer, he never-
less continues to give the institution the bene-
f his general supervision.
Mr. Crawford made a suggestion, recommending
the Transfer Book be opened for inspection,
that a list of the Stockholders be published
nually.

5th. On motion of T. M. Thomson, Esq., se-
ded by John Ogilvie, Esq.:—
esolved,—That a vote of thanks be given to
n Crawford, Esq., for his able conduct in the
Chair.

A. TROTTIER,
Secretary.

MERICAN MUTUAL AND STOCK COMPANIES.—
A zealous agent of one of the American Mutuals
writes to a Stratford paper as follows: "My at-
tion has been called to an incorrect statement,
ade by the National Life Insurance Co., regarding
the rates of Mutual Companies. The National
ays it will grant a policy for $1,000 for a premium
of $16.55, and that the Mutual Companies will
only give a policy for $783.48 for that sum.
Now, what are the facts? The largest Life Com-
pany in the world, the C. M., nearly twenty-four
years old, (and the National has existed only since
June last) will give a policy to a person aged
forty years for $2,000 gold for a premium of
$31 80, and require no note.

Insurance.

INSURANCE MATTERS IN NEW YORK.

(From Our Own Correspondent.)

NEW YORK, March 7, 1869.

With the advent of spring and the more joyous aspects of external nature, we felicitate ourselves upon the steadily improving condition of our political and financial situation. The gold premium has been steadily receding, money is easy for all legitimate purposes, the quotations for national bonds have been rapidly advancing on both sides of the Atlantic. Congress has passed several assuring measures such as the national credit, coin, contract, certified check, and national bank Bills, by which the movements of trade will be, to a certain extent, exempted from the spasmodic disturbances of speculation; the inaugural of General Grant everywhere inspires universal confidence and his Cabinet appointments argue an honest and wise administration of the Departments. All the conditions of a good business for the spring and summer are present, and our trading classes are confidently expecting a good time coming.

The underwriting fraternity of this city are well satisfied not only with the business of 1868, but more especially with the remarkable exemption from fires, thus far in 1869. Although we have as yet only unofficial statements of the operations for 1868 they are sufficiently accurate for purposes of comparison.

Year.	No. Coy's.	Premiums Received.	Losses.	Expenses.	Net Surplus.
1868	104	$20,261,031	$10,059,502	$7,982,415	$7,824,268
1867	106	24,066,469	14,313,431	6,384,901	6,723,263

Amount of risks unsettled in 1867.....$2,508,426,421
" " " 1868..... 2,504,199,562

Deducting the excess of expenses in 1868 over 1867 from the difference in the losses of the two years, and we readily find where the increase of net surplus has come from. The five dividends to stockholders for 1868 were $2,752,101, and for 1867 $2,232,354. Twenty-one companies passed their dividends in 1867 and only ten in 1868.

The Massachusetts Insurance Department has just issued advance sheets, showing the general condition of the stock, fire, marine, mutual and fire-marine companies in that Commonwealth for the year ending January 1, 1869. Of the thirteen companies represented in this city twelve report, and they are all credited with respectable balances; total surplus $2,655,412; average $211,284, after charging 50 per cent. reinsurance, and 100 per cent. on all unearned marine premiums. This surplus represents only $3,250,000 capital, being over 60 per cent. on capital. The Boston companies have always pursued a highly conservative course, and are usually stronger than New York offices—the reserve being held to a satisfactory point despite the clamor of stockholders.

We continue to multiply our life companies—the Hercules, has organized, with William B. Lambert, formerly an agent of the Equitable Life, as President. The original Hercules was a thorough-going character, if we are to credit the mythological accounts of him. He performed his seven labors with wonderful vigor and success. The Hercules Life, of New York, will require both strength, patience and perseverance before it lands on the safe side of Jordan. The Empire Life, and Commonwealth Life, were announced two or three weeks ago. They are officered by former employees of the Continental Life. But the important question connected with the future of these companies is *where* is the business to build upon? The number of New York Life Companies has doubled within five years and now amounts to 33, besides 22 of other States reporting to this department, not to speak of the balance of 65 company's now reporting, making the total in the United States 120 companies. The enormous *waste* connected with the too rapid multiplication of life companies is shown not only in the extravagant ratio of expenses to premium receipts, but in the ratio of lapsed, surrender and not taken policies. The business is inflated and demoralized, and the insuring community disgusted. Five months experience, to Jan. 1, 1869, of the National Life Insurance Company of the United States, capital $1,000,000, is an illustration of the existing intense competition and cost of getting business. "Cash premiums," $174,201, cost, $149,125, so far as reported. But the premiums received included $33,928 still in hands of agents, so that the actual expenditures exceeded the receipts by nearly $10,000!! Our Legislature has before it several bills of a general character affecting life insurance, but the law most needed is one that shall hereafter require every new life company to have at least $500,000 deposited with the Superintendent. This would probably cool off a number of ardent people who combine to raise $100,000, for the purpose of making snug berths for themselves and their friends. The United States Casualty, organized in 1866, and reorganized in May, 1868, as a life and casualty company, has finally become an exclusively life company, to be known as the Anchor Life. Mr. E. C. Fisher, a very energetic and capable officer, continues as heretofore President of the Company, which now confidently hopes to get into a prosperous business, rapidly. They have about 500 policies to start with.

There are several bills before the Legislature which are designed to make material changes in the character of our life companies. Of these the new Forfeiture Bill reported in the Senate, has attracted much attention. It is substantially like the act passed by the Massachusetts Legislature in 1861, and provides that a policy shall not become void for non-payment of premium till the sum already paid has been exhausted in temporary insurance; or in other words, till the policy has no longer any value, and that nothing shall be forfeited, but the right to reinstate the policy. A large committee of the New York actuaries has been before the Senate, to ask certain modifications of the bill as reported; and, in accordance with their wishes, a new bill is to be introduced. The Massachusetts act is indisputably equitable, and has been found of easy application. Several New York offices have already adopted it, but there should be a law to enforce it upon all companies.

Heretofore, New York life offices have been restricted to this State, and within a circuit of fifty miles around, as the geographical limit for investing surplus. As the rate of interest in several Western States is much higher than in New York, the Eastern offices, which have not been so restricted, have enjoyed a decided advantage over our companies. It is now proposed, by a bill before the New York Legislature, to place our companies on an equal footing with others in this respect.

The annual statements of the life companies doing business in this State are probably all at the N. Y. Department by this time, and the Superintendent, with his army of clerks, busy with the great labor of his forthcoming report—the valuation of some 450,000 policies. But the doctors will not agree, as the two departments of Massachusetts and New York have a different assumption of mortality and interest. Besides, the companies will not agree with the doctors. For instance, the National Life of the United States assumes 6 per cent. interest in its valuation, while the departments will allow severally 4 and 4½. The new form of return will enable the superintendent to present in contrast, what he calls "realized" and "unrealized" assets, and it will be noted when the returns appear, that the deferred and unpaid premiums, premium notes, and premium loans, are generally, and largely in excess of the cash, real estate, mortgages, stocks, bonds,

and call loans. The column "expenses of management" will make some of the old companies that can do business for 12 to 16 per cent. smile, as they will see many instances in which young offices have spent nearly the whole of their premium receipts for their business. Among this class of companies 30 to 40 per cent. commissions is below the average, and it is evident to the merest tyro in life assurance, that nothing but failure awaits such extravagance.

In a former letter, I referred briefly to the suit of the Knickerbocker Life Insurance Company *vs.* J. B. Ecclesine, of the New York *Underwriter*. Mr. E. was arrested for an alleged libel on the company, but on an argument of a motion to vacate the order of arrest, Judge Freedman held that the matter was not libelous of itself and released the defendant. A further motion by the defendant, requiring the company to amend its complaint, by alleging the specific cases in which persons had refused to insure or been deterred from insuring in the company, by reason of the publication of the alleged libelous matter was also granted by Judge Freedman. So that the Knickerbocker's complaint, does not thus far appear to have found much favor with the courts. This suit has attracted a good deal of attention among insurance people, and the final task required of the company, to prove before a jury, specifically, instances of damage, to its business will necessarily be a very difficult one.

The meeting of the Executive Committee of the the National Board of Fire Underwriters, recently held in this city with closed doors, was neither harmonious nor satisfactory in its final conclusions. Two questions particularly agitated the Committee—the rating of dwellings by the National Board, and the interesting rebate question. With respect to the dwellings, it was finally agreed that where a local board declined to rate the dwellings in its locality, the rate should be left free for the companies to write as they pleased. This was a defeat of the high pretensions of certain members, who quite dogmatically insisted that all such ratings should be by the National Board. The Committee of Conference, to whom was referred the questions of rebate and brokerage, at the late convention of out-town companies held in this city, made an informal statement, for information, that they would report to the National Board, at its spring meeting, a recommendation for the adoption of flat or net rates, leaving parties getting insurance to pay brokers if they employed them, and relieving the companies from all rebate, brokerage and commission on direct risks. Unless the National Board can meet the difficulties connected with this rebate question, it will soon become disintegrated. The New York city companies, which do no agency business, are allowed the unequal privilege of allowing a rebate to customers in lieu of commissions, while out-town companies are deprived of this privilege. But the greatest difficulty is in the annoyance and loss occasioned to respectable agents over the country, adhering to Board rates, by agencies of strong companies not in the Board, which advertise to take the same class of risks for one-sixth to one-eighth less. It is hard for an agent to stand by uncomplainingly and see his business carried away by these guerrillas. The National Board has already accomplished much good in the cause of sound underwriting, and it is to be hoped that the several agencies can be so far protected as to secure the cheerful adhesion of their companies to the Board.

New York capital is largely represented in the insurance business of Missouri, and therefore our underwriters have just heard with marked satisfaction of the passage, after a protracted and bitter struggle, of an excellent general law for that State, to be administered by a department. It requires all stock fire and life companies to put up a guarantee deposit of $100,000, and make specific annual statements after the forms provided in New York. This act will rid Missouri of some fifty "wild cats," and clear up the atmosphere, so that the business classes can see the inside of any company, home or foreign, soliciting confidence and business. Thus the good work goes bravely on. The area in which bogus companies can operate is, happily, being rapidly restricted.

Now that they have reached a third story, the new building of the New York Life and Equitable Life Insurance Companies are the notable objects on Broadway. The New York Life's building will be ready for occupation in about a year, and will cost, with lot, about $1,500,000. Numerous applications for rooms have already been made, and the company expect to have their own apartments at a nominal rent. I have not been able to learn the cost of the Equitable building and lot. The building is granite, and a most solid and beautiful structure, and cannot cost less, probably, than the New York Life's structure. These buildings, and the corporations that own them, are doubtless destined to stand for generations, and long after their founders shall all have become companions with the insensible clod—continue the beneficent work to which they are devoted.

M. A. C.

Fire Record.—Collingwood, March 5.—Mrs. Cooke's tavern, on the road to Meaford, six or seven miles from this place, was totally consumed with contents; the inmates had barely time to escape; loss $1,200 to $1,500. No insurance; the fire caught from a defect in the chimney.

Osprey Township, Co. Grey, Ont., March —. The barn and outbuildings of John Hutchinson, with contents, were consumed. No insurance. The fire was caused, as is supposed, from a spark from a lighted pipe.

St. Catherines, March 5.—Barn of Mr. Hagan; no particulars.

London, March 6.—S. Stewart's brick cottage on Maitland street, occupied by Mrs. Chisholm, caught fire, it is thought, from the hall stove. The flames were extinguished, but the house and furniture were damaged to the extent of $500.

Tavistock, Ont., Feb. 28.—The store and premises of Mr. Moore, were consumed. Mr. M. had just received a large stock of goods, and his loss is therefore heavy.

Mount Forest, March 4.—The premises occupied by Mr. Colclough, druggist, together with the telegraph office and *Examiner* printing office, were totally consumed by fire. The fire commenced in the rooms above the telegraph office, and is supposed to have originated from a defect in the chimney. Insurance on Mr. Colclough's stock, $2,000, and on the *Examiner* office, $500.

Peel Township, Ont. Feb. 25.—The barn of Terence Hanlen, lot 2, con 3, Peel, was totally destroyed by fire. The whole of his grain, hay, and farming implements in the building were consumed.

Brockville, Ont., March 4.—The dwelling of Robert Ferguson took fire; the flames were soon put out; the premises and furniture sustained considerable damage.

Stratford, Feb. 28.—The cooper shop of Mr. Needham was entirely destroyed by fire, with its contents. The Council, satisfied that it was the work of an incendiary, offered a reward of $200 for his conviction.

Thorold, March 2.—A disastrous fire broke out in the grocery store of Mr. John Cloy, and the flames quickly communicated to the stores of Mr. Leonard and Mr. Hart, all of which, with most of their contents, were totally destroyed. During the progress of the fire, great consternation was created amongst the crowd, by the explosion of a quantity of gunpowder, kept for sale in Mr. Cloy's establishment. Fortunately, nobody was seriously injured. Mr. Cloy was insured for $8,000 in the British America; Mr. Leonard for $2,200; Mr. Hart was also fully insured. The total loss is estimated at $20,000, and the amount of insurance on goods and buildings about $14,000. The origin of the fire is unknown.

Superintendent Barnes and the Life Companies.—There can be no doubt that the the condition of several life companies in New York demand a prompt and searching investigation on the part of Mr. Barnes. There can be no doubt that the official report of officers to the department are "cooked," and fail to show the real condition of many of the companies. The unreal is easily dressed, and named real; the fictitious is easily reported in a guise that will not necessarily excite suspicion. That these things have been done, everybody believes. That some of the companies are reckless is well known. That four and one half per cent reserve cannot be on hand after paying losses, and the extraordinary expenses incurred, is manifest. The public welfare demands a thorough investigation. The reckless companies should be punished. Mr. Barnes should let the companies know that he is superintendent, and that the duties of the office will be performed. There must be retrenchment, or there will be ruin.—*Chicago Spectator.*

—Mr. Chisholm, of the North British and Mercantile Insurance Company, Edinburgh, and who holds the diploma of the Faculty of Actuaries in Scotland, has been appointed Actuarial Assistant in the Imperial Life Assurance Company, London.

—The Chicago *Spectator* objects to the attempted introduction into American Life Assurance of the tontine principle, as unwise and dangerous. It considers such schemes dangerous, because they eventually strain the resources of a Company, and tempt it for the sake of maintaining its past position to encroach on the future, while at the same time it conceals both the fact and the results.

—Mr. Barnes is preparing to make a valuation of the business of all the Life Companies doing business in New York.

TONTINE DIVIDEND SYSTEM.

Tontine annuities, which were first made attractive by Lorenzo Tonti about the middle of the seventeenth century, have become exceedingly popular throughout Europe, and in some parts of South America. A tontine is quite the reverse of life assurance, it being, in fact, a combination of persons who contribute to a common fund; that as years roll on, and the numbers surviving diminish, the income is, of course, constantly increasing to those who live, until the last member of a class enjoy most extraordinary advantage from the system. In 1689 the last survivor of the tontine in France, a widow, just before her death, enjoyed an income equivalent to $20,000 of our money, for her original subscription of about $80. So popular has this system been in Europe, that many governments have used it for the purpose of raising money for national support. There are many persons so situated that they care little for leaving money for those that come after them (who, they may consider, have little or no claim upon them), and prefer to enjoy while living a large annual income, which, combined with entire safety, their money could not produce in the shape of interest in any other way. Such are those who invest in tontine. Life insurance, as has already been observed, is quite the reverse of the tontine principle; and the arguments which cause persons to invest in securities of this character appeal to a higher and more unselfish motive than those which influence the investment in tontines. The popular apprehension in the minds of many persons who are asked to insure their lives, but who have not given life insurance much study, is that, in case of a long life the investment may prove a bad one; but a careful investigation will prove that this objection is not well founded. We have before us a policy of one of the leading mutual companies, issued more than twenty-five years ago, taken out originally for $5,000, on which, when the policy became a death claim, more than $10,000 was paid, the excess over the original amount of the policy being

ore than seven per cent compound interest on l the payments received by the company. It is oper to state that this result was due not only the marvellous power of compound interest, but so to the fortunate increase in the value of investments, and the large return of surplus premiums. The case cited is not an isolated one; e same thing has been often repeated. But, at e same time, it can but be acknowledged that e gain from investments of this kind is greater the case of early death, and the popular mind eks for some simple method by which a certain ofit can be secured, whether the assured die rly or late.

A system has recently been devised for the mbination of all the advantages of life assurnce with those of tontine, and brought out unr the supervision of two well-known actuaries, r. Sheppard Homans, actuary of the Mutual fe Insurance Company, and Mr. George W. illips, actuary of the Equitable Life Assurance ciety of the United States. This system is own as the "tontine-dividend system," under ich, by a skillful adjustment of the dividends, reward is given to those life assurants who live arly up to or beyond their expectation of life. a person at the age of 35 insures his life in a mpany for $25,000, and pays a premium of 59.50, and dies during the year, while, theoretilly, as much profit is made on him by the comny as on those who are long lived, because the bles are adjusted to meet this exigency, still, in practical sense, certainly very little money is ade out of the individual transaction. Thus it uld appear to the ordinary mind that it is exdingly equitable that the person who dies early, d whose family receives the face of his policy, ual to a profit of 100, 500, or even 5,000 per nt on the money he has invested, should not ceive a further sum in the shape of dividends, d those who continue to pay their premiums rough a long series of years should have the nefit of accumulated dividends, in addition to e face of their policies respectively, giving them profit somewhat approximating to that of those ing early. The "tontine-dividend system" ns to accomplish this equitable distribution of rplus. And it is thought by the Superintenent of Insurance for the State of New York, n. Wm. Barnes, and many of our most promint business and financial men, that it will pularize life insurance to a degree hitherto unown.

The plan as applied to a particular case is uply this: If a person at the age of 35 years ires his life for $25,000, and pays the premium $650.50, this annual premium is to be theoretily compounded at the rate of 10 per cent per num, until such premiums and interest as ecific amount to the face of the policy, which uld be at the age mentioned in 15.4 years. uring this intervening period the company uing the policy is to make its annual dividends this and all other tontine policies as on the t of their policies, reserving the same and setg them apart as a fund belonging to the tone class, but not payable in any case until the l of the specified period of 15.4 years, and then ly on such policies as shall then be actually in ce, those policies terminating in the interval ceiving no dividends. The person holding tontine-dividend policy above mentioned will, the end of the 15.4 years, begin to benefit by dividends already declared; and further divids will be made annually thereafter throughout the remainder of the term of the policy. ese dividends will be payable in cash, thus reeing or cancelling the annual premiums, and many cases yielding a cash annuity as well, has been calculated by the best actuaries that dividend on such policies will be three or four es as great as on any other kind of policies. some cases the dividends are expected not only wholly cancel the premiums, but to yield a stantly increasing cash annuity as well.

Persons dying during the non-dividend period receive the face of their policies, respectively, and no more. Persons discontinuing their policies during the non-dividend period, lose all they have paid.

This plan will admit of a number of variations: For instance (1), the division of profits may begin at the end of the arbitrary period of ten, fifteen, or twenty years; or (2) a separate class of policies may be issued, upon the surrender of which paid-up policies will be given for the value thereof, in case the same are allowed to lapse by non-payment of premium before the dividend begins.

Financial.

MONTREAL MONEY MARKET.

(From our own Correspondent).

Montreal, 9th March, 1869.

The money market continues easy, though there is rather more demand for payment of duties. The remittances have, however, been better lately—fully equal to the general receipts at this period; notwithstanding the long list of insolvents weekly reported. Bank rates are unchanged; good bills are readily taken at 7 per cent. Not much doing in the street; the few bills offering not being of a desirable quality. As has been the case for the last few weeks there continues a good demand for stocks and shares, and favourite securities are firmly held. The highest rate of the Bank of Montreal is 141, but few sales at that price. Considerable transactions in City at 103 @ 103½. British, sellers 105½; buyers 104. Peoples in favour at 107, now held for 108½. Molson's have risen, and sales have been made at 113. Merchants dull at 108 to 108½. Not much doing in other Banks. Miscellaneous stocks and shares quiet, but the market is firm.

TORONTO STOCK MARKET.

(Reported by Pellatt & Osler, Brokers.)

There has been a fair amount of business done in stocks and bonds during the week, and prices are without much change.

Bank Stock.—Montreal has been sold to a limited extent at 140½; there are now buyers at that rate and sellers at 141. British has been offered at 105½, but there are no buyers over 104. There were small transactions in Ontario at par. Sales of Toronto have taken place at 121, at which rate there are still buyers. Royal Canadian was sold at 88 during the week, but declined to 85, at which rate there have been small sales. Commerce is offering in small lots at 103; very little demand. There are sellers of Gore at 41; no buyers over 40. Merchants' has been inquired for during the week at 108½; there are sellers now at 109. Buyers offer 99½ for Quebec, with sellers at par. Molson's is in fair demand at 113, at which rate there were sales. Sellers ask 103½ for City, with buyers at 103. For Du Peuple 107 is asked; some sales were made at that rate. No Nationale in market; buyers would give 106½. Jacques Cartier is in demand at 109, with no sellers under 109½. No sellers of Union; buyers offer 104½. In other banks nothing doing.

Debentures.—Dominion stock is in good demand at 105½; nothing doing in Canada's. Toronto are in good demand to pay 6¾ per cent.; none in market. Some first-class County have been placed at par.

Sundries.—City Gas has been sold at 108, and there are still buyers at that figure. Considerable sales of British-America Assurance took place at 55½, and there are still buyers at that rate. Transactions in Canada Permanent Building Society occurred at 125 to 126; stock is now offered at 126. Sales of Western Canada Building Society were made at 121; little offering. Freehold is in good demand at 110 to 110½. Notwithstanding the large amount of forfeited Canada Landed Credit shares offered, they have advanced over 2 per cent. in the week. Several large mortgages were placed at rates to pay 8 per cent. There is an average demand for money.

BROWN'S FAILURE.

On Friday an examination of W. C. Chewett took place before the Judge of the County Court, under the Insolvent Act. The Royal Canadian Bank, the Merchants' Bank, the City Bank and Philip Brown & Co. were represented. Mr. Chewett testified that he was engaged in the publishing business, but sold out in April, 1867; entered into partnership with W. R. Brown, 2d Feby., 1868, but put no capital into the concern; dont know whether Brown had any capital in it; Brown stated he had between $10,000 and $20,000 in it; no statement was made out; Brown had real estate worth $40 to $50,000; the mistake was not converting his currency into gold day by day; large amounts were accumulated, and when gold went up loss was certain; Brown's business was simply speculation in gold; gave Brown the guarantee to the City Bank without knowing how he stood; gave a guarantee to the Royal Canadian; the City's guarantee was broken, and the debt due it was $50,000, but the bank subsequently made terms with Brown relative to its payment; the debt now due is the balance; half of Brown's property was settled on his wife prior to opening the account with the Royal Canadian; this property was mortgaged to the Royal Canadian in December last; I put no money into the concern; I had transactions with Brown before entering into partnership; lent him money; I had a claim on Chewett & Co. for $15,000, but assigned it to my mother in April, 1867; I built a house which cost me $25,000, and deeded it to my wife in Dec. 1867; assigned a mortgage on the Rossin House for $2,600 to my wife at same time; at the time of these conveyances was not a partner with Brown and had no idea of becoming such; I anticipated the making of a will; the conveyances, through neglect of my lawyer, were not registered till July 1868; my surplus, after making these settlements, was $14,000 stock in the Canada Permanent Building Society; $1,000 in Bank of Toronto; $3,000 Rossin House; $400 Yorkville and Vaughan Plank Road; $600 Western Assurance; cash due $2,000—gross total $30,000; my indirect liabilities amounted to $15,000, and direct to $10,000; I sold stock in the Canada Permanent to pay $7,500 to the City Bank in January last, as it was a debt before the settlements, and I wished to make the settlements secure; did not think I was insolvent; the firm could not at the time pay its debts in full; the Royal Bank fully understood our position as to the gold margin. (The President denied this); kept my private account at the Bank of Toronto; on 4th Feby., 1869, I owed it $10,000; gave a mortgage to Mr. Worts on Granville street property for $7,500, which amount he paid over to the Bank; cannot say why the mortgage was not made direct to the Bank; transfered to Mr. Copp the 100 Western Assurance shares to secure him in a $1,000 note; still hold $600 stock in the Rossin House, a debt of $925, shares in Yorkville Road, worth $40, and an interest in land in Bloor street worth $100; the City Bank holds a cheque of W. R. Brown & Co. for $3,000, but has security for it; have no further interest in my father's will; my brother lost everything in the Commercial Bank and I assigned him my interest in the estate without consideration; previous to my marriage there was no agreement relative to a settlement; my wife's relatives have frequently spoken to me about it; have heard Mr. Brown is in New York; have not heard from him since we stopped payment.

—Molson's bank has declared a semi-annual dividend of four per cent., payable on 1st April. Transfer books closed from the 16th to the 31st March.

THE CITIZENS' INSURANCE COMPANY
(OF CANADA.)

Authorized Capital.....$2,000,000
Subscribed Capital..... 1,000,000
HEAD OFFICE—MONTREAL.

DIRECTORS.

HUGH ALLAN, - - - - PRESIDENT.

C. J. BRYDGES, | EDWIN ATWATER,
GEORGE STEPHEN, | HENRY LYMAN,
ADOLPHE ROY, | N. B. CORSE.

Life and Guarantee Department.

THIS Company—formed by the association of nearly 100 of the wealthiest citizens of Montreal—is prepared to transact every description of LIFE ASSURANCE; also, to grant Bonds of FIDELITY GUARANTEE, for Employees holding positions of trust.

Applications can be made through any of the Company's Agents, or direct to

EDWARD RAWLINGS, Manager.

Agent for Toronto: W. T. MASON. | Agent for Hamilton; R. BENNER.

TO CAPITALISTS.

FOR sale, a Two-thirds share in sixty acres of desirable Gold Mining Land, for

$10,000 DOLLARS.

With a view to develop and equip the same.

Address, *bona fide*,
Box 266, G. P. O.
29-2t. Halifax, Nova Scotia.

The Canadian Monetary Times.

THURSDAY, MARCH 11, 1869.

THE BANK CHARTER QUESTION—ITS EXTERNAL SURROUNDINGS.

The Bank charters expire in 1870. The question of their renewal and the terms and conditions on which it shall be done, cannot well be postponed till next year. It will be desirable to dispose of the question next session of Parliament, which cannot now commence before April, and is likely to drag on through the greater part of the summer. There will be an opportunity of applying some general principle to the constitution of all the banks in the Dominion, and it is pretty certain to be embraced. The reasons in favor of a general law, or at least of the application of some general principles, to all the banks, are obvious. It is right to take advantage of the lessons of experience to strengthen weak points, to eliminate what has proved to be vicious, and to preserve what has stood the test of time.

There are numberless points over which men might differ in arranging a new scheme of banking or giving a new lease to an old one. But, in this instance, there will be one great dividing line, on either side of which contending parties will array themselves. The question of questions will be whether the Government is to be allowed to take from the banks the power of issuing notes and to fill the void by an issue of Dominion notes. The intentions of Mr. Rose and his colleagues have not been fully declared. The question is apparently in its incipient stages. A committee of enquiry was appointed last session, at the instance of the Government, and had scarcely entered on its task when the prorogation took place. But committees of enquiry are not always intended to elicit the whole truth and nothing else. When the Government has a design, not very easy of execution, a committee is often selected as the best means of covering it: the conclusion of its enquiries is pretty certain to be in accordance with the secret predetermination of the Executive. Something of this kind is expected in the present case. Nobody doubts that the Government at Ottawa has made up its mind to use all its influence to displace the existing bank circulation by Dominion notes. This is universally regarded as a foregone conclusion; and there is no reason why the question should not be discussed on that basis.

The exterior circumstances under which the change is proposed must, first of all, be taken into account. Unfortunately the issue of Government notes did not originate in the consideration of what would be best for the country; how the soundest currency could be provided; how the bill-holder could best be protected, and the convertibility of the paper circulation be most certainly maintained. The Government was not in a position to consider these questions. It was in the position of a man who is too hungry to philosophize; it could think only of its own pressing and imperious wants. It was reeling under a heavy load of floating debt, of which it was desirous to rid itself, even temporarily; and it catched at the suggestion to put its pressing obligations into a shape that would admit of their being used as currency. The Provincial note had its birth in this way. It was the child of poverty; it had Debt for its father and Necessity for its mother.

And while this is true of the first-born, it will be doubly true of the rest of the progeny, if more there are to be. The class of journals whose business it is to supply the public with political information announced, as long ago as last summer, that Government had obtained leave from the guardians of the Intercolonial Railway loan to apply to a purpose, different from that for which it was borrowed, the portion that had come to hand. It was alleged that the money was used to pay off that balance of the floating debt which the issue of Provincial notes to the Bank of Montreal had been insufficient to cover. And we have never seen any direct and absolute denial of the statement. The silence seems to carry a tacit consent.

On the supposition that this fund was temporarily turned from its purpose, the enquiry arises, how is it to be restored? There is no hope of its coming out of the revenue for that would imply a surplus, which ne entered into the calculations of the Mini of Finance. And borrowing for such a p pose, in the ordinary direct way of putt securities on the market, is out of the q tion. The deposits paid by insurance c panies and the small savings of the po classes, which have gone into the Governm Savings' Banks, amount to but an insign cant sum compared with what was obtai on the Intercolonial Railway loan, an supposed to have been temporarily diver from its destination. Appearances favor suggestion that the seizing of the bank ci lation is looked to as a means of restorin its rightful destination, the Intercolo Railway loan.

Here again we find the necessities of Ottawa Government usurping the plac the consideration of what is the best wa place the currency on a sound basis. I manifest that there could be no consid tion of anything but how to supply pressing wants of the Dominion Treas If a Government currency is to grow ou considerations of this kind, and if the n in which it is to be embodied are to bec the unique currency of the country, i evident that we are in the greatest dan and it would be no difficult task to estim how near a Banking law, originating in s motives, and framed on such princi would bring us to that form of national b ruptcy which is implied in a governm paper currency, originally issued with promise of redemption in specie on dem but for which specie cannot be thus obtai Two years would be the utmost stretc time that could be expected to elapse f the commencement of the system t collapse and the era of an irredeemable p currency. No event short of a war of i sion, famine, or an earthquake, would l great a calamity as the bringing abou such a state of things.

The danger that the replacing of the b note currency, by an issue of Governm paper, would lead to an irredeemable rency, lies in the circumstance that the iss power, and the political power, would l the same hands. The issuer would only to desire a release from the obligatio convert the notes into specie on demand it could be done by the exertion of the tical power of the government. And lies one of the great differences between notes and Government notes. The bank simple trading corporations, with no po power to release themselves from the ob tion of paying their notes in specie. A pension involves their credit, their cha their very existence. They have the st

interest to make every possible exertion maintain specie payments. The Govern-nt, on the other hand, would have the ongest temptation to dispense with that ligation ; and as their object, in usurping paper circulation, has been from the first supply temporary necessities, we are justi-l in concluding that they would again yield influences which they have, in the past, n, and are now, unable to withstand. Let there be no self-delusion on the sub-t. A Government issue of notes to dis-ce the existing bank note circulation, ans, in the not distant future, an irre-mable currency, whatever professions y be made to the contrary, and whatever visions of law may be made that would m to form a gaurantee against that danger. e evil would come by degrees ; its march ld be by stealthy steps ; but the result ld be inevitable, and it would come on very first pressing financial emergency of Government.

THE BEAVER MUTUAL.

he business of this Company, for the past shows a gain of 2,183 policies, and an in-se of premium notes of $11,496 over the previous. The Company holds premium s, liable to assessment, amounting to $91, Its cash receipts were $30,959, and enditure $32,673 ; the losses by fire were 918. The Directors are strongly in favor of he premium note system, and consider the system a departure from true mutual ciples. The cash mutual system, now rial in the States, is recommended as one hy of adoption. The union of this Com-y, with the Toronto Mutual, is received favour as likely to promote efficiency economy and financial strength. The s sustained by fire during the Summer ths were heavy, and the Inspector, very erly, draws attention to the number of which arise from defective chimnies.—plaint on this score has been made, again again, by all our Insurance Companies, the wonder is that so much carelessness ilding timber into brick work is allowed ntinue. The Directors make very sen-remarks respecting the concealment of nbrances on property insured. The mode ested is an admirable one, and if the Di-rs have the necessary courage to carry it hey will earn the gratitude of the com-ty at large by adhering to it. Cases very frequently in which fires are di-traceable to this fearful source of cri-lity. The Barrie case referred to was ubject of comment in this journal at the Some of the political newspapers, in and country, attacked this Company for its defending the suit. It turns out just as we expected that the defence was based on a true sense of what is due to the honestly disposed portion of the community. The plaintiff had mortgaged his property, without notice to the Company, and when a fire occurred, under such circumstances, the Company decided to stand on their rights. The Legislature has thought fit to protect the members of Mutual Companies by a rigorous enactment on the subject of concealing incumbrances, and we do not think that Directors are justified in virtually abrogating it by paying claims in full which are tainted with suspicion. We are disposed to give this Company great credit for the stand they have taken in the matter, as well as for the spirit of economy displayed, and we see no reason to doubt that its progress will be steady under its present efficient management.

INTERNATIONAL LIFE INSURANCE COMPANY OF LONDON.

There are quite a number of Canadians interested in this Company, and from what we learn from our English exchanges respecting its position, we judge it is about time for them to take measures to protect themselves. The purchase of the business of the International by the Hercules appears to have been a piece of cool and magnificent impudence. Although the financial state of the Hercules, at its last annual meeting, did not warrant the declaration of a dividend, yet, within a few months thereafter, it became the purchaser of a Company of thirty years standing, with, according to the *Post Magazine*, "its attached liabilities and a tainted character." The presumptuous purchaser is now undergoing that truth-evolving process styled liquidation. It came out in Court that the International lost one-fourth of its capital between 1862 and 1865. This state of affairs had led to negotiations for the transfer of its business. The Hercules was the favoured Company which was sought out to shoulder the burden. This Company had a paid-up capital of only £53,688, and after receiving £150,000 from the International possessed invested funds slightly in excess of $150,000. Those who negotiated or promoted the transfer seem to have made a good thing of it. The Directors of the International paid £150,000 to the Directors of the Hercules in consideration of the latter taking upon themselves the liabilities of the former. One gentleman, Mr. Sheridan, was paid £8,000 ; £15,000 was to be paid to the Secretary of the International for compensation for his loss of office. This nice little arrangement, however, was not communicated to the shareholders. The journal above quoted says :

"The worst part of the story remains to be told. It is so positively stated in the report that £150,000 was the sum paid over to the *Hercules* Company, that we must conclude the money was actually received by the directors and brought under their control and disposition. We know, however, from the best authority that, within the last fortnight, a cheque for £200 was returned unpaid on presentation at their bankers. The circumstance, possibly, admits of satisfactory explanation, and it is to be hoped that it does but at present the matter wears an ugly look."

It appears further that the shareholders of the International are not satisfied with these arrangements on their behalf, and are taking steps to have the contract rescinded. The Hercules, as well as the International, is in liquidation, so that the pair are well matched. The latest intelligence is given in the following paragraph from the *Post Magazine* :

"These two Companies having become involved in heavy Chancery proceedings by which the assets of the Companies would become materially reduced, to the great injury of the share and policyholders, an arrangement is in progress by which the threatened litigation will be prevented, or be much reduced ; and the difficult questions of equities and cross equities which have arisen will be solved. As a part of the arrangement the Life Policies of both Companies will pass to the Prudential, if the funds in hand and securities to be provided are sufficient to cover the responsibilities associated with so large a transaction, and the terms of the transfer be such as to obtain the sanction of the Court of Chancery."

We are glad to say that we are seldom called upon to chronicle such a disgraceful transaction in life insurance as that above set out; but the fact that such things do occur shews how necessary it is for those interested in insurance companies to make themselves acquainted with their standing and by timely precautions guard against loss.

THE FAILURE OF BROWN & Co.

The examination of Mr. Chewett, of the firm of W. R. Brown & Co., brokers, has revealed a state of facts in connexion with that firm's affairs little creditable to that gentleman. It appears that five years ago Mr. Chewett gave a guarantee to the City Bank for the indebtedness of Mr. Brown, which amounted to $50,000. In 1867 he sold out his interest in the firm of Chewett & Co., but the name of the firm continued unaltered, and no notice was given that his interest had ceased. He then settled on his wife his house, which cost $25,000, and a mortgage for $26,000 on the Rossin House ; and in February, 1868, being possessed, in his own name, of almost nothing, became a partner with Mr. Brown, without even asking for a statement of Mr. Brown's financial position. The fact is that at the time of Mr. Chewett's becoming such

partner, the concern was insolvent. Although Mr. Chewett had disposed of his property, the public were not aware of it, and as he had the reputation of being the possessor of ample means, and certainly had the reputation of an honourable man, his name in the partnership gave it a position which it otherwise could not have commanded. We do not know whether persons were induced to deposit with a "banking house" whose business was, as Mr. Chewett confesses, merely speculation in gold, by reason of their confidence in Mr. Chewett, but we can easily understand the influence of his name in connection with it. The circumstances tell strongly against Mr. Chewett.—He first parted with all his property, and then became a partner with a man whose financial position he must have known to be unsound. At the least he did not think it worth his while to ask for a statement of his affairs. Whatever may be said of the legality of the settlements there cannot be two opinions as to the morality of Mr. Chewett's conduct.

THE Directors of the Gore Bank have decided to close the remaining branches of the bank, and confine operations to Hamilton, under the management of Mr Read.

Communications.

OVER-INSURANCE.

Editor of the Canadian Monetary Times.

SIR,—In a communication over the signature "Insurance," in your issue of last week is a clause which, as it is calculated to mislead those not conversant with matters of which the writer professes to treat, deserves a passing notice. Your correspondent says, in speaking of the insurable value of buildings: "It ought to be explained to the insured that 'he can only insure two-thirds of the actual value, he being his own insurer for the other one-third. I am aware this is often not done as I have frequently been told, 'such a Company will take any amount I will give them.' The reply is a very simple one, they may take your premium but would not pay you more than your loss or two-thirds of the value. For instance if the cash value of a property is $4,000 no company will pay more than $2,667.

I am surprised at any one professing a knowledge of insurance matters advancing such an absurd statement. If my building is worth $4,000, and the company insuring is so injudicious as to cover the whole amount—a circumstance which through the ignorance or avarice of agents I am sorry to say often occurs—I have only, in the event of the total destruction of my building, to prove that it was actually worth that amount, and I recover in full. In support of what I aver, I will only for the present cite one authority, which I have no doubt will be considered sufficient. Angell on Fire Insurance, sec. 249, page 307 says, "The difference between the mode of adjustment and satisfaction, in the contract of Marine and that of Fire Insurance in the event of loss (as has been stated by a very learned judge, whose attention through a long course of judicial duty has often been directed to both branches of insurance law) is distant and obvious. The following is his language: 'In fire policies the assured recovers the whole loss if within the amount insured, without regard to the proportions between the amount insured and the value of the property at risk.'"

Your correspondent must, I fancy, have got some confused idea about the average clause in Marine Insurance and mixed it up with a condition of that nature embodied in some English fire policies, but which, however suitable to some of the various branches of business in England, certainly, unless in very exceptional cases (and then by special agreement) finds no favour in Canada.

Truly yours,
INSURER.

Toronto, March 10, 1869.

Mining.

MADOC GOLD DISTRICT.

(From our own Correshondent.)

BELLEVILLE, March 8th, 1869.

Very little progress has been made in mining operations for several weeks past; and such strict secresy has been observed in almost every quarter where work has been done, that I shall be obliged in some cases, however unwillingly, to give you current reports instead of authentic intelligence.

The Richardson Company affect no reserve as to their doings; but from various causes they have not done much work of late. Mr. Dunstan, their manager, came down last week, bringing with him a "brick" of gold of the value of $260, the produce of about 50 tons of rock, or about $5.25 per ton.

The Merchants' Union Company lately sent 3 tons of their vein-stone to be reduced at the Caldwell (Severn) Mill. The total result was gold to the value of $2; but if, as is reported, the mill is in a bad state of repair, this crushing may not be a true index of the value of their ore; indeed, both from inspection and experiment, I am inclined to think more favorably of their lode.

The mill in question (Severn's) has been running night and day for some weeks upon quartz from the Fiegel mine, with very satisfactory results. The mill-owners have not let anything be known as to the actual amount realized, but $20 per ton is freely mentioned. The supply of ore from this source is, however, cut off, as Mr. Feigel intends to put up machinery to reduce his ore on his own account. This I give merely as a current report.

The proprietors of the Barry mine, in the Township of Elzevir, have been running their new machinery experimentally, with, it is said, "splendid results." As the shareholders have got their disputes settled, they will shortly commence to work commercially—also a common report.

The Toronto and Whitby Company's mill at Bannockburn is now complete, and in working order; but I have not heard whether or not any crushing has been done there.

The machinery for Mallorytown is well advanced. The boiler and other essential parts have been sent down, and the remainder of the apparatus is being got ready as quickly as possible.

A company of gentlemen from Cincinnati are about to commence working a deposit of grey crystalline limestone, banded with plumbago, at Eagle Hill, in the Township of Denbigh, which has given good results by small assays.

Some of the principal mining men in the Town of Belleville, contemplate erecting a test mill to make assays of rock of 100 lbs. each, on the pan system of amalgamation, under the management of Prof. Bell, of Albert College. When ready to go into operation, it will be advertised in the MONETARY TIMES.

—The Elgin Mining Company's well at Port Stanley is over 400 feet deep, but no sign.

—Bank of New Brunswick stock was recently sold at 17½ premium.

Law Report.

GUARANTEE POLICY—FRAUD.

The Bank of Toronto having taken proceedi in the Superior Court, Montreal, against the En pean Assurance Society, upon a guarantee poli issued to secure the Bank to the extent of $16, against "such loss as might be occasioned to said Bank by the want of integrity, defaults irregularities" of Alexander Munro, the mana at Montreal, judgment was given, substantial as follows:—

The precise charges set forth in the declarat and upon which the plaintiffs seek to recover whole amount named in the policy may be sta as follows:—That Munro, without any authori in direct violation of his instructions, and c trary to every rule followed by banking insti tions in this country fraudulently allowed the of Nichols and Robinson, brokers of this City overdraw their current account in the Ban Montreal from the 1st of March, 1865 to the May of the same year.

The balance of which overdrafts on the mentioned day being $28,160.29 cy.; that th overdrafts were allowed without security, various devices were made use of each month conceal such overdrafts and that they were c trived and carried ont in collusion with Nich and Robinson, who subsequently became in vent; that a judgment had been obtained aga the latter by the Bank for the amount, wh could not be recovered, and that Munro absconded and had left nothing wherewith to the debt.

The Defendants met this action by the gen issue, and by two special pleas which raised s stantially three points—namely:—

1st. That the overdrafts were allowed by Mu in the exercise of the discretion appertainin him as Manager at Montreal, and in the tran tion of the ordinary business of the Bank.

2nd. That they were allowed openly and w out fraud, and passed regularly through the bo of the bank of Montreal for months before 1st March, 1865, as was well known to the pl tiffs; and 3d, that although large overdrafts constantly allowed by Munro, and regularly tered in the books of the bank, which accor to the proposals for the policy were under stant supervision by the head office, the plain had never notified the defendants of the fa and that by withholding such notice, the po had become void under the 4th condition the stated, if, in point of fact, the allowing overdr as in the present case, could give rise to a cl The clause adverted to is as follows:—"T (subject to a discretionary power exercisabl certain cases by the Directors in Canada of re ting the forfeiture) a policy of guarantee beco void as to future claims, upon its being n known to the directors of the said society in nada by the employers that the party w honesty is guaranteed has committed or omi any act which gives the right to make a c under the policy; and that the employers bound immediately upon discovering, or ha notice of the commission or omission of any act, to forward a written intimation of the s and so far as circumstances will permit of all ticulars attending the commission or omis thereof to the directors; and that by wilfully knowingly omitting or neglecting so to do, two months after such discovery or notice policy becomes absolutely void, both as to exis and future claims thereunder.

These questions appear to me susceptible of following definite and condensed arrangement 1st. Was the allowing of the overdrafts wit security, a default or irregularity within the m ing of the policy, apart from any fraud or c sion? 2nd. If not, was there any fraud or c sion between Munro and the firm of Nichols Robinson in respect of these advances? 3r

either ground a claim arose, had the character Munro's acts in regard to these overdrafts be- ne known to the Bank more than two months evious to the notice by them given to the de- ndants ?

In proceeding to adjudicate upon the main—the cisive issues raised by the parties in this case, I ist first advert to the rules of the Bank, and to practice with respect to over-drafts. This is a int of essential—of paramount importance, and, such, has received the careful consideration of e Court. Now, as a matter of fact, admitting no doubt, there was no rule of the Bank, pro- rly so called, prohibiting over-drafts previous the occurrences under review, although such a e is incidentally referred to by one of the wit- sses as having been since made; and there seems be no doubt from the evidence adduced, that er-drafts were frequently permitted. Mr. Worts, Vice-President, does not deny that an agent y occasionally so accommodate a good customer, l the account of his firm in Toronto seems to ve been frequently overdrawn. It was attempt- to draw a distinction in this respect between powers of the Cashier and the highest officers o managed the Bank at Toronto, and those of nro who managed it at Montreal. But Mr. orts himself says, that "the functions of the Cashier, Manager and Agent are similar as re- gards the management of the local institution ver which such officer is appointed;" and this tement appears to be justified by the character these functions, and the plaintiff's description Munro's powers in their proposal for insuranee. Montreal over-drafts were permitted by Munro other persons besides Nichols and Robinson; y were made evident in many of the reports nished by him to the Board at Toronto. He ears also to have allowed them at Peterboro', although he was found fault with on that oc- ion, it was evidently very leniently censured; , notwithstanding his having allowed them, plaintiffs, in their guarantee proposal, declare t he has been in their employ for several years, had given them satisfaction. Afterwards e over-drafts were found when his accounts e inspected in December, 1864. Mr. Dallas, manager who succeeded him, seems to have wed them, to a certain extent; and Mr. Arnold, ledger-keeper, declares "that although it was ot the general practice in the Bank to allow ver-drafts, it was not unusual and it was always dmitted that the agent or manager had the ower to allow them or not, as he might think roper;" and he says he was perfectly justified cting under his orders in passing the cheques, had done so for the large and small amounts er Mr. Dallas' instructions since Munro's dis- sal. And there is strong confirmation of this y to be found in the fact, that this Mr. Arnold, passed all the over-drafts allowed to Nichols Robinson, Sidey, Crawford and others, was dismissed by the Bank, nor so far as appears vidence, was even censured for having done so, ough he was perfectly cognizant of all the cir- stances of the over-drafts, including the ab- e of security.

is remarkable, if not incredible, that the 12 s of the deposit ledger which have been pro- d, shewing the enormous transactions of Ni- s & Robinson, from 1st November, 1864, to middle of May, would have exhibited column column, composed chiefly of debit balances— y, if not most of which are overdrafts, if ro was not recognized by every official in the k as having this species of discretionary power. the attempt is made to distinguish between overdrafts complained of, and the numerous rs exhibited in the record, on the ground of amount or of the security taken for them.— the fallacy of this pretension is plain. The ciple is the same, so far as this ease is con- d, whether the overdrafts be small or great. erdrafts are permitted or tolerated at all, the unt of them is in the discretion of him who s them. To permit too large an overdraft, then, becomes an imprudent or injudicious act, not an irregular one. The same argument applies to the distinction as to security. The taking of security seems to have been far from an invariable rule, apart from Nichols & Robinson's case, and this is also plainly referable to the discretion of the manager. If he could, without censure, advance fifty dollars without security, the advance of fifty thousand is within his functions, and it might easily be conceived that the loan of fifty dollars to one man without security might be more certain to be productive of loss to the Bank than the loan of fifty thousand to another, and, in this case, the immense transactions of Nichols & Robinson with the Bank reduce the amount of over- drafts to comparative insignificance. I am, therefore, of opinion that the allowance of overdrafts was not in itself an irregularity within the meaning of the policy.

But if the facilities given to Nichols & Robinson originated in any fraudulent or collusive design, the case would undoubtedly fall within the terms of the policy ; and this point is of the gravest importance.

The fraudulent collusion alleged materially rests upon the assertion that Munro and Nichols and Robinson carried on joint operations in stocks and gold, and that Munro afforded them facilities by way of over-drafts to assist in these joint speculations, to float over the margins which required to be put up for them, and the others of his own in New York; his object being to share the profits, and in some cases of transactions to receive commissions for the aid he was giving, and that he fraudulently contrived to conceal these over-drafts from his employers by conniving at fictitious balances being made up at the end of the month. These are serious charges, and, if substantiated, would, in the absence of every other obstacle, sustain the plaintiff's action.

After going over the evidence the learned judge considered that there was no evidence against the defendants on this point. He said further: I consider the ruin of Nichols & Robinson and their inability to meet their engagement at the bank sufficiently accounted for by the terrible monetary crisis through which this and the neighboring country was at this moment passing. A catastrophe which swept away from them $150,000 in one month might well have deranged the calculations of a bank manager to a greater extent than that suffered by the plaintiffs, and the fact that the firm had such a capital to lose, and that any less misfortunes would have left them competent to fill all their engagements, may not be without significance in the consideration of the conduct of Munro.

I am unable, therefore, to find the evidence of fraudulent collusion involved in the second branch of inquiry; and as to the third very little remains to be said.

If the fact of allowing over-drafts in itself give rise to the right to make a claim under the policy, then I would be of the opinion that the policy was void by a breach of the fourth condition. But as I hold that allowing over-drafts *per se* without a positive nay, a peremptory rule and practice of the Bank against it, does not constitute a default or irregularity within the meaning of the policy, my decision in regard to the breach of the fourth clause becomes unnecessary; and also holding as I do, that no fraud or collusion in respect to these over-drafts is established or has been proved by legal and sufficient testimony to have been perpetrated by Munro. I am under the necessity of dismissing plaintiff's action.

BANKERS' MAGAZINE.—The March number contains an Essay on Banking and the Currency. The Curreney system of United States and Europe. The London Money Market of 1868, &c.

—The New City Gas Co., of Montreal, has declared a semi-annual dividend of four per cent., payable after the 15th. Transfer books closed to the 15th.

Railway News.

NORTHERN RAILWAY.—Traffic receipts for week ending February 27th, 1869.

Passengers ...	$2,092 19
Freight and live stock.....	4,799 32
Mails and sundries.....	762 77
	$7,654 28
Corresponding Week of '68.	2,447 67
Increase.....	$5,206 61

GREAT WESTERN RAILWAY.—Traffie for week ending February 19, 1869.

Passengers	$20,263 34
Freight.....	45,147 13
Mails and Sundries	2,167 72
Total Receipts for week.....	$67,578 19
Coresponding week, 1868...	67,302 79
Increase	$275 40

INTERCOLONIAL RAILWAY.—Messrs. H. H. Horsey & Co., who tendered for No. 1 section of the Intercolonial at $8,750 per mile, having discovered an error of one million cubic feet in adding up the quantity of earth excavation, withdrew their tender, and the Commissioners unwilling to litigate the matter, have given the contract to G. & J Worthington, of Quebec, the next lowest on the list. The tender of the latter was $9,485 per mile. The contract obtained by the Messrs. Worthington for No. 4 section is allowed to be assigned to Elliott, Grant & Whitehead.

WOODEN RAILWAYS IN QUEBEC. — The Railway Committee of the Quebec Assembly adopted the following resolution :—"That the charter for the Sherbrooke and Eastern Townships Railway from Sherbrooke *via* Dudswell and Weedon, and thence on the most feasible route and grade to connect with the Levis and Kennebec Railway, be granted, and that the charter of the Saint Francis Valley Railway from Lennoxville to Decourtenay place in Bury, thence to or near Bishop's Landing, and thence to Lake St. Francis, and thence to Kennebec road, be granted." The charter of the former road to be for a wooden railway, with the right hereafter to substitute iron ; and the charter of the latter to be for an iron railway, with the right hereafter to substitute wooden rails. In both charters the right to compromise, and amalgamate both companies into one company ; or to arrange upon connections for the common use of both roads for track, in case the two companies are kept up.

REVENUE AND EXPENDITURE.—The following is a statement of the Revenue and Expenditure of the Dominion of Canada for the month ended 28th February, 1869 :

Customs.....	$409,790 95
Excise.....	206,281 61
Post Office.....	47,360 73
Bill Stamp Duty.....	11,976 93
Public Works including Railways..	44,835 73
Miscellaneous.....	536,276 36
Total.....	$1,256,522 31
Expenditure.....	$638,728 43

—Counterfeit $4 bills on the Gore Bank are in circulation in Galt.

—The Welland County Council has decided not to purchase right of way through that county for the proposed Erie and Niagara Extension Railroad Company.

—The Hamilton Gas Company, has declared a half-yearly dividend of 3½ per cent.

—A despatch from Montreal states that counterfeit bills on the Bank of Montreal are in circulation in that city.

—Mr. John Henderson of the Gore Bank has obtained a position in the Bank of Toronto.

Commercial.

Montreal Correspondence.

(From our own Correspondent.)

Montreal, March 1, 1869.

The weather has been bright and cold, with so far no appearance of spring. You may fancy the state of our streets when I mention that several of our leading photographers were busy taking views of the miniature snow mountains in them, to commemorate the remarkable winter we have had. Business continues very dull, but rather improved, and hopes are already entertained of a fair and safe business in the spring. It is to be hoped that the insane competition in all branches of trade will this year be modified; our merchants have been so severely bitten for the last three or four years that I expect a more cautious policy will prevail. The large grocers have suffered, especially; but all branches have sustained severe losses as will be seen by the long lists of insolvents weekly published. Our present bankrupt law does not give satisfaction, and, I have no doubt, some very considerable alterations in it will be proposed next session. The present system of official assignees is strongly commented on. The agitation is, either do away with them altogether, or appoint more and of a higher and more efficient class. At present such is the pressure of business that all new cases are pigeon-holed, and, like Chancery suits, in England, a glorious uncertainty rules as to whether the estates will ever be wound-up.

The Produce Market is exceedingly dull, the state of the roads having seriously interfered with all business. In Flour, prices are nominally unchanged. Total receipts from 1st January to 3rd March, 1869, 69,058 brls. against 52,569 brls. last year. Total shipments for same period, 1869, 34,961 brls. against, 1868, 26,612 brls. Stocks in hands of Millers, 1st inst., 83,478 brls. against 64,400 in 1868. No sales of grain on the spot, and only very small ones of U. C. spring wheat to arrive. Receipts of wheat 1st January to 3rd March, 1869, 22,750 bus. against 13,329 bus. in 1868.

Provisions.—Pork is rather firmer for barrelled, but dressed hogs have declined fully $1 per 100 lb. Butter firm, and there is a good American demand for good to choice, as high as 25c. having been paid; stocks are light; little doing in other articles.

Groceries.—There has been but little animation generally. Sugars have followed the New York market; no animation and prices unchanged. Teas more active, and several sales have been made at good rates. Dried fruits have rather advanced, but little doing. Molasses, the recent high prices have checked sales. Very little doing in other articles. I give the imports of the leading articles from 1st January to 1st March:—

	1868. Quant.	1868. Value.	1867. Quantity.	1867. Value.
Coffee.....lbs	3,436	$ 661	lbs. 645,176	$11,955
Fruit.....	....	9,576	....	14,141
Brandy.....gals	132	....	gals. 165	....
Gin.....	2,490	....	67	....
Rum.....	103	....	1,615	....
Molasses.....	390,370	5,377	451,929	6,251
Sugars.....lbs	824,656	42,580	lbs. 1,791,037	82,619
Teas, green....	167,026	49,037	493,143	181,174
" black.....	49,859	13,796	73,994	20,305

Dry Goods.—It is expected that this business will open earlier than usual, large quantities of goods are arriving by each steamer. I give you the imports, 1st January to 1st March, of leading articles:—

	1868.	1869.
Woollens.....	$338,687	305,256
Cottons.....	508,125	525,090
Silks, &c.....	54,450	33,762
	$901,262	$864,108

I give you a statement, furnished by Messrs. Robertson, Steven & Co., shewing the imports from 1850 to 1867 into Montreal, Toronto, Quebec, and also the total into all Canada:—

	Montreal.	Toronto.	Hamilton.	Quebec.	All other Ports.	Total Imports.
	$	$	$	$	$	$
1850	2994688	1441208	802612	588240	876000	6712748
1	3975076	1227688	1015332	849572	1157910	8225930
2	4154000	1342988	1156048	825012	762092	8240040

Toronto Market.

Trade has been much interrupted by snow during the past fortnight; complaints of this are heard from all quarters. Mail communication has been so uncertain that no dependence whatever could be placed in it. This applies more particularly to the district east of Toronto. The Quebec mails have only reached us in a spasmodic kind of way, several days accumulations usually coming together.

Groceries.—*Sugars*—Are steady; a decline of 1c. in New York has been counter-balanced by a fall in the gold premium so that prices here are not altered from last week's quotations. *Teas*—There is a little better demand for teas, but the market is pretty bare of some grades owing to shipments ex the S. S. St. Andrew, Moravian, North American, Prussian and St. George being delayed on the eastern section of the Grand Trunk by snow. So soon as these goods arrive the assortment will be complete. These steamers brought out a large quantity of dry goods, hardwars, &c., as well as groceries.

Boots and Shoes.—Orders are coming in steadily, but owing to the state of blockade the country is now in, there is less doing this week; prices are unchanged.

Grain.—*Wheat.*—Receipts 6,800 bush., and 14,640 bush. last week; the market for spring is dull, with only a moderate supply offering; there are buyers of good samples at 95c. Sales of car loads were made some days since, at 96c to 98c free on cars. Fall is dull and nominal at quotations; there is a good deal offering. The stock in store on the 8th inst., was 127,715 fall; and 98,450 bush. spring, against 85,209 fall and 111,500 spring on 16th March, 1868. *Barley.*—Receipts, 1,750 bush., and 640 bush., last week. The market is very dull and the demand slack, with a good deal offering; lots are held at about $1 30. Stock in store on the 8th, 57,000 bush.; against 70,800 on the 30th Jan., and 1,400 on 16th March, 1868. *Oats.*—Receipts, 2,533 bush., and 2,600 bush., last week; car loads are offering at 50c. on the track and there is very little demand. Stock in store on the 8th, 25,200 bush., on the 30th Jan., 1869, 11,400 bush., and on the 16th March, 1868, 32,100 bush. *Peas.* Receipts about 1,000 bush., and 560 bush., last week. Peas are offering at 78c. but are unsaleable; prices are nominally lower, as quoted. Stock in store on the 8th, 30,600 bush., on the 30th January, 1869, 39,000 bush., and on 16th March,'68, 21,660 bush. *Rye.*—No lots moving, on the street 70c to 75c is paid for sleigh loads. *Seeds.*—There is a good demand for Timothy, at $2 to $2 75 for lots; the supply is moderate. Clover, is wanted at $7 to $7 10; for lots of No. 1 seed. *Flax*—$2 to $2 50.

Flour.—Receipts 6,800 bbls., and 2,400 bbls. last week. There is very little demand, and we quote No. 1 superfine at $4 to $4 05; two or three lots of 100 bbls. sold at $4 05 in store. A lot of 500 bbls. fancy sold at $4 25 at Malton, there is not much demand, extra is worth our quotations. 100 brls. extra sold at $4.55 on cars, and 100 bbls. at $4 50. No Superior in market. Bag flour is he at $3 90, but could not be sold over $3 80. *Oa meal*—is offered freely at $5 75 with no buye over $5 50, no sales to report. *Cornmeal*—u changed. Stock of flour in store on the 8th ins 22,560 bbls., on the 30th Jan., 1869, 9,700 bbl and on 16th March, 1868, 12,900 bbls.

Provisions.—*Butter.*—Stocks are small, near all available lots being placed for the New Yo market; we note sales of 400 packages, selecte 24½c.; ordinary is neglected; the market clos quiet for all qualities. *Pork.*—There are buye of Mess at $25 50 to $26, holders asking $26: st reduced by retail sales at some advance on o quotations. *Bacon.*—The stock is ample and held in few hands at 11½c with 11c offere *Cheese.*—there is a good local demand, but t supplies are light and there is no wholesale mov ment. *Eggs*—very dull, fresh packed 19 to 20 limed are a slow sale at 15 to 16c.

Petroleum.—Trade is quiet, and prices of r fined are very steady at our quotations; the d mand is limited to requirements for immedia consumption.

Leather.—A number of job lots of sole we placed with the city trade at prices within t range of quotations; other articles quiet.

Freights.—Rates by Grand Trunk Railway: Flour to all stations from Belleville to Lynn, i clusive, 35c., grain per 100 lbs. 18c.; flour Brockville and Cornwall, inclusive, 43c. grain 22 flour to Montreal 50c. grain 25c.; flour to stations between Island Pond and Portland, i clusive, 85c. grain 43c.; flour to Boston 90 gold, grain 45c.; flour to Halifax $1.10, grain 55 flour to St. John $1 02. Boxed Meats to Liverpo per gross ton 80s.; lard or butter in tinne 85s.; Pork 11s. per tierce; flour 5s. 6d. p barrel; grain 12s. per 480 pounds. Rates Great Western Railway—Flour, Toronto to Su pension Bridge 25c. gold; thence to New Yor 92c. U. S. currency per bbl.; to Boston $1.0 Grain to Bridge 13c., gold; thence to New Yo 47c, U. S. currency; to Boston 51c. Grain, T ronto to Detroit, 18c. per 100 lbs; flour 3 per bbl.

Halifax Market.

Breadstuffs.—Feb. 23.—Our market for t week shew a considerable decline, and still ten downwards. The absence of speculative dema continues, and receipts largely in excess. Whi wheat extra (fall) $6.75 to $7.00; fancy $6.25 $6.35; bakers' strong $6.10 to $6.25; super $5.75 to $5.90; No. 2 $5.00; middlings $4 25 $4.50; Pollard's $4.00 to $4.25; rye $4.75 $5.00; cornmeal K. D. $4.15 to $4.25; F. $4.00 to $4.10; oatmeal $7.00 (dull).

Provisions.—The demand for Pork is st small, and receipts light. Beef continues du and unchanged. Butter more active at 24c. 25c. for good dairy, 22c. to 23c. for shipping tubs. Lard active, sales have been effected at 1 for American. Cheese is firmer without enquir Pork, Prince Edward Island mess, $23. to $24; prime mess $18.50; prime $13 to $1 beef (mess) $10 to $12; prime $7.50 to $8.0 butter 23c. to 26c.; lard 19c. to 20c.; cheese 14 to 14½c.

West India Produce.—Considerable excit ment prevails in Sugars and Molasses. Seve cargoes of the latter have changed hands here, a to arrive, at 35c. to 36c. (in bond) being an a vance of 5c. to 6c. ₱ gallon on last week's sale Higher prices are anticipated, and some holde refuse to sell at present. Sugars at Auction Saturday last realized 8¾c. to 9c. for V. P. a Barbadoes, respectively. Rum is still inacti and unchanged. Coffee dull. We quote:—Sug V.P. 9¾c; Porto Rico, 9¼ to 9½c; Cuba 9c. to 9¼ Barbadoes 9c.; molasses, Cienfuegos 40c. to 42c Trinidad 38c. to 40c.; rum (in bond) Demerar 55c. to 58c.; coffee, (Jamaica) 13c. to 15c.; S Domingo, 10c. to 13c.

INTERCOLONIAL RAILWAY.

THE Commissioners appointed to construct the Intercolonial Railway give notice that they are now prepared to receive TENDERS for THREE FURTHER SECTIONS of the line.
Section No. 5 will be in the Province of Quebec and will extend from forty miles East of Riviere du Loup, at the end of Contract No. 2, to the Sixty-sixth Mile Post, near Rimouski, a distance of about Twenty-six miles.
Section No. 6 will be in the Province of New Brunswick, and will extend from the Easterly end of Contract No. 3, opposite Dalhousie to the West side of the Main Post Road near the 48th Mile Post, Easterly from Jacquet River, about Twenty-one miles.
Section No. 7 will be in the Province of Nova Scotia and will extend from the Southerly end of Contract No. 4, near River Phillip, to Station Fifty at Folly Lake, about Twenty-four miles.
Plans and profiles with specifications and plans of contract will be exhibited at the office of the Board of Works, Toronto, and at the offices of the Commissioners at Ottawa, Rimouski, Dalhousie, St. John, and Halifax, on and after the FIFTH day of March, 1869, and SEALED TENDERS, addressed to the Commissioners of the Intercolonial Railway, and marked "Tender," will be received at their office in Ottawa up to SEVEN o'clock, p. m., on the TWENTY-NINTH day of MARCH, 1869.

A. WALSH,
ED. B CHANDLER,
C. J. BRYDGES,
W. F. COFFIN,
Commissioners.

Intercolonial Railway Office,
Ottawa, 11th February, 1869.

The Commissioners give notice that in consequence of late storms having interrupted the mail service over the country, the plans for the three further sections to contract, will not be ready for exhibition until 12 March, and tenders will be received up to 7 o'clock, p. m., on MONDAY, the 5th APRIL, 1869.

Deposits received. Collections promptly made. Drafts on New York in Gold and Currency issued.

H. N. Smith & Co.,

2, EAST SENECA STREET, BUFFALO, N. Y., (correspondent Smith, Gould, Martin & Co., 11 Broad Street N.Y.,) Stock, Money and Exchange Brokers. Advance made on securities. 21-1

THE CONNECTICUT MUTUAL

LIFE INSURANCE COMPANY,

HARTFORD, CONNECTICUT.

WOODBRIDGE S. OLMSTEAD, SECRETARY, | GUY. R. PHELPS, PRESIDENT,
EDWIN W. BRYANT, ACTUARY, | ZEPHANIAH PRESTON, VICE PRESIDENT.

LUCIAN S. WILCOX, MEDICAL EXAMINER.

Organized in 1846. Charter Perpetual.

The Largest Mutual Life Insurance Company. **Numbering Over 75,000 Members.**

BEING A PURELY MUTUAL COMPANY ITS ASSETS BELONG EXCLUSIVELY TO ITS MEMBE

ASSETS, $21,000,000.—Acquired by prudent and economical management of twenty-two years, without the a a single dollar of original capital.

SURPLUS ASSETS, $6,361,967—All profits divided among the members. Each policy holder is a member. Ther no stockholders.

ITS DIVIDENDS—Have averaged over 59 per cent. annually. Total amount of dividends paid the members sinc organization, $4,397,142.

ITS SUCCESS UNPARALLELED—It has arrived at the extraordinary condition where the income from annual int alone is more than sufficient to pay all the losses. Total amount of losses paid by the Company, $6,368,528.

ITS RESPONSIBILITY—For every $100 of liabilities it has $154 of assets.

LAST YEAR'S PROSPEROUS BUSINESS.

Amount insured fiscal year, 1867 .....$45,647,191 00 | Income received fiscal year, 1867.....$7,530,886

During its last fiscal year this Company paid to its living members, and to the families of deceased mem nearly $2,000,000, and at the same time added more than four millions to its accumulated capital.

The whole record of this Company has been one of prudent management and prosperous advancement. Amon older and leading Life Insurance Companies its average ratio of expenses to income has, through its entire history, the lowest of any.

ITS LIBERALITY—It accommodates the insured by giving credit for part premium, and grants insurance to all the contingencies and wants to which Life Insurance is applicable.

It issues policies on a single life from $100 to $25,000.

MEDICAL REFEREES—J. WIDMER ROLPH, M.D.; H. H. WRIGHT, M.D.

OFFICE - - - - - - No. 90 King Street East, Toronto.

J. D. FEE, AGENT, TORONTO. DANIEL L. SILLS, GENERAL MANAGER FOR CAN
Toronto, December 24, 1868. 12-1y

LIFE ASSOCIATION OF SCOTLAND.

Invested Funds Upwards of £1,000,000 Sterling.

THIS Institution differs from other Life Offices, in that the BONUSES FROM PROFITS are applied on a special system for the Policy-holder's personal benefit and enjoyment during his own lifetime, with the option of large bonus additions to the sum assured. The Policy-holder thus obtains a large reduction of present outlay, or a provision for old age of a most important amount in one cash payment, or a life annuity, without any expense or outlay whatever beyond the ordinary Assurance Premium for the Sum Assured, which remains intact for Policy-holders' heirs, or other purposes.

CANADA—MONTREAL—PLACE D'ARMES.

IN 8,000 SHARES—$25 EACH.

President—WM. EDGAR, Esq., Hamilton. Vice-President—ROBERT REFORD, Esq. (Messrs. Reford & Dillon), Montreal.

Secretary-Treasurer—A. McK. COCHRANE, 388 St. Paul Street, Montreal.

HIS COMPANY, with machinery now in working order and in course of construction, will be able to manufacture this year FROM TEN TO TWELVE THOUSAND TONS OF GOOD FUEL. Actual working shows—

I. That the fuel can be produced for $1.45 a ton, and with the improved machinery, at a much less cost.
II. That, for steam purposes, one ton of it is superior to one cord of wood, in the proportion of 31 to 27.
III. That, for domestic purposes, it is equal to wood or coal, and leaves very little ashes—about five per cent.

At the annual meeting of the Company in Montreal, it was decided to offer one thousand shares of Stock in Toronto. Mr. Isaac C. Gilmor has been appointed agent of the pany in Toronto, and is authorized to receive subscriptions for the Stock.

Prospectus, Map of the Property, and further information may be obtained by addressing

BRITANNIA LIFE ASSURANCE COMPANY.

Capital and Invested Funds.....£750,000 *Sterling.*

ANNUAL INCOME, £220,000 STG.:

Yearly increasing at the rate of £25,000 Sterling.

THE important and peculiar feature originally introduced by this Company, in applying the periodical Bonuses, so as to make Policies payable during life, without any higher rate of premiums being charged, has caused the success of the BRITON MEDICAL AND GENERAL to be almost unparalleled in the history of Life Assurance. *Life Policies on the Profit Scale become payable during the lifetime of the Assured, thus rendering a Policy of Assurance a means of subsistence in old age, as well as a protection for a family*, and a more valuable security to creditors in the event of early death; and effectually meeting the often urged objection, that persons do not themselves reap the benefit of their own prudence and forethought.

No extra charge made to members of Volunteer Corps for services within the British Provinces.

☞ TORONTO AGENCY, 5 KING ST. WEST.

Meetings.

TORONTO MUTUAL FIRE INSURANCE COMPANY.

The second annual meeting of this Company was held at the office, 20 Toronto street, on Tuesday, February 23, 1869. The chair was taken by R. L. Denison, Esq. After the usual routine business, the Secretary read the report of the Board of Directors, as follows:

Report.

In submitting the usual annual statement of the affairs of the Company, the Board of Directors are glad to congratulate the members upon the satisfactory result of last year's operations.

The following summary will show, that since the 31st December, 1867, up to the end of the year, the business has been more than doubled; and it is believed that our position at the present time will compare favorably with that of any other Mutual Company doing the like class of insurance.

Household Branch:

Applications to Dec. 31st, 1867,		516	
Less cancelled in 1868		8	
			508
Applications to Dec. 31st, 1868		852	
			1360
Amount Insured to Dec. 31st, 1867	$300,285		
Less cancelled in 1868	3,900		
	$296,385 00		
Amount insured to Dec. 31st, 1868	506,722 00		
			$803,107 00
Premium Notes to Dec'r 31st, 1867	$9,452 53		
Less cancelled in 1868	165 25		
	$9,287 28		
Premium Notes to Dec. 31st, 1868	14,495 30		
			$23,782 58

Mercantile Branch:

Applications to Dec. 31st, 1867		354	
Less cancelled in 1868		21	
			333
Applications to Dec. 31st, 1868		529	
			862
Amount Insured to Dec. 31st, 1867	$282,682		
Less cancelled in 1868	19,350		
	$263,332 00		
Amount insured to Dec. 31st, 1868	381,336 00		
			$644,668 00
Premium Notes to Dec. 31st, 1867	$18,446 24		
Less cancelled in 1868	1,189 68		
	$17,256 56		
Premiums to Dec. 31st, 1868	26,085 79		
			$43,342 35
Total Policies in both Branches			2,222
" Amount Insured			$1,447,775 00
" Amount of Premium Notes			$67,124 93

The average amount insured per policy is—Household Branch, $591—Mercantile Branch, $748. The cash receipts for the year were $14,692.13—Disbursements, $14,015.95. Fire claims, Household Branch, $2,022.81—Mercantile Branch $6,688.63. The number of policies expired or cancelled during the year was—Household Branch 33—Mercantile Branch, 106.

Your Board might easily have done a two-fold larger business, had they followed the example of other Mutual Companies in taking heavy risks, or risks on property specially hazardous.* However legitimate such business may be in the abstract, your Board have felt it to be the wiser course to defer accepting it until the Company should be older, and better able to incur the hazard. It will, of course, be for their successors to decide whether this policy of exclusion shall be relaxed, and to what extent.

Your Board have, by way of further precaution, re-insured with another company all risks exceeding $1,500 in amount; and have besides, employed a competent Inspector, whose sole duty it is to examine and report upon every existing risk in turn, and whose services are kept in constant requisition for that purpose. Could any further precaution in the selection of risks have been taken, your Board would certainly have done so.

Up to the end of last year, it was found impracticable to carry out the promise held out in your prospectus, by assessing all members of each Branch in exact proportion to the losses and expenses in that Branch; and in consequence, an assessment of 2-9ths of all premium notes in force, was directed to be made temporarily. Now, however, the books of the Company are carefully made up with a view to a complete system of assessment on that principle; and every member will be credited in his next year's assessment with the surplus (if any) he may have been charged on his former assessment. This, it is hoped, will be entirely satisfactory in every case, especially as no such difficulty can possibly occur hereafter.

It may be perhaps too soon to ascertain accurately, what proportion the rates of insurance in the two branches bear to each other; but from present appearances they are very evenly balanced, which would tend to prove, that no change in our tariff rates is likely to be called for, by way of doing equal justice to all members in proportion to the hazard of their respective risks.

Your Board have had under consideration, a resolution passed at the recent annual meeting of the Beaver Mutual Fire Ins. Association, of which a copy has been officially communicated to them, authorizing the Board of Directors of that body to make arrangements for its union with this Company. In the desirability of such a union your Board entirely concur, and recommend immediate action on your part to carry it into effect. The reason assigned at the meeting held in December, 1866, for the formation of a distinct company, viz: that farmers would not insure in a company taking town or village risks, has been removed in a great degree by the introduction on a large scale of the cash system into farm insurance, under which system it matters nothing to the insured what classes of risks may be taken together. Besides, there are several companies now in existence doing a mixed farm and village business, and they find that the prejudice above noticed is dying out, more particularly as it is now seen that the better class of town and village risks can be insured quite as cheaply as farm property.

* The following risks are at present refused by the Board:—Cabinet shops, carriage factories, candle and soap factories, carding mills, cooper's shops, cheese factories, carpenters' shops, chickory kilns, drug stores keeping benzole or more than two barrels coal oil, hop kilns, or drying houses, iron foundries of any kind, pot and pearl asheries, tanneries, tenants' goods in stores, paint shops, woollen mills, spice mills, and steam engines of all descriptions.

By the special Act of last session of the Ontario Legislature, passed 4th March last, secs. 4 and 5, three only of your Directors retire on this occasion, viz: Messrs. Fleming, McCord and Howland, whose places it will be your duty to fill up, by re-election or otherwise, as you may determine by ballot, according to the statute.

R. L. Denison, President.
S. Thompson, Managing Director.

Toronto, Feb. 23, 1869.

The Treasurer's statements of receipts and expenditures, and of assets and liabilities, were also read:

John Maughan, *Auditor.* H. Hancock, *Sec. and Treasurer.*

The chairman then moved the adoption of the report, which was carried unanimously.

Dr. Riddel then moved, seconded by Mr. Fleming: "That the Board of Directors be authorized to take steps for carrying out the union of this Company with the Beaver Mutual Fire Ins. Association, and to prepare a petition to Parliament, and also a bill to give effect thereto." Carried.

On motion of Mr. J. W. Hancock, seconded by Mr. Gregory, it was resolved, "That 2,500 copies of the annual report be printed for the use of policy holders."

On motion of Mr. Paterson, seconded by Mr. Rowsell, Mr. John Maughan was appointed Auditor for the current year.

The ballot for the election of three Directors in the place of those retiring, was then proceeded with, and the scrutineers reported that the choice of the meeting had fallen on Messrs. C. E. Chadwick, A. Barker and Joseph Gregory.

After the usual vote of thanks to the President and Directors, and to the officers of the Company, the meeting broke up.

At a meeting of the Board of Directors, held subsequently, Charles E. Chadwick, Esq., was elected President, and D. Thurston, Esq., Vice President for the current year.

UNION PERMANENT BUILDING AND SAVINGS SOCIETY.

The annual general meeting of the stockholders of this Society was held at the Society's office, on the afternoon of Monday, the 15th instant. A statement of the affairs of the Society was submitted, together with the Auditors' report thereon. From these it was shown that the Society has made decided progress during the past year, there being a considerable increase both in the amount of paid-up stock and the amount of deposits. Two half-yearly dividends had been paid to the stockholders at the rate of 10 per cent. per annum, and a sum added to the permanent rest.

It was agreed that a new issue of shares be made to the extent of $25,000, at a premium of 6 per cent.; and resolved that the paid-up stock be capitalized as soon as the necessary arrangements can be completed for that purpose.

A ballot being then taken, the following g tlemen were re-elected Directors for the ensu year, viz.:

Mr. Francis Richardson,
Mr. Arthur Lepper,
Mr. Thomas Henning,
Mr. Isaac C. Gilmor,
Mr. J. C. Fitch,
Mr. A. Henderson,
Mr. George Goulding.

Pesqu' Isle and Belmont Railway.—A meeting of the Provisional Directors of the Pre Isle and Belmont Railway, held at Campbellf on Monday, the 8th March, the following ge men were elected officers, viz:—

John Eyre, Esq., M.P.P. President.
J. M. Ferris, Esq., Vice President.
John E. Proctor, Esq., Treasurer.
M. K. Lockwood, Esq., Secretary.

The liveliest interest was manifested, to l operations commenced as soon as possible.

Insurance.

Fire Record.—Lucknow, Ont., February 2 John Grundy's waggon shop and contents ; surance on the latter $300, none on the build which were valued at $400.

Napanee, March 16.—A fire occurred at N nee on Monday night, about half-past ten o'cl by which a frame building on Dundas street, longing to Messrs. Webster & Boyes, carri makers, was consumed. Part of the buil was occupied by them as a store-room for unfi ed work, a large quantity of which, being st in the garret, was burned. They were insur the British American Insurance Company—o stock $100, and on the building $200—which not cover their loss. The upper story was pied by the Misses Wales as a dwelling and liner shop. They lost nearly all their clot jewellery, $70 in cash, and only escaped in nighs clothes. Insured for $200 on goods. Howes occupied the ground floor as a gro Her goods and effects were nearly all saved.

Kings, N.S., March 7.—A dwelling house, contents, owned by Mr. Goddard, of South Bra Kings County (between Penobsquis and Don in Albert County), was almost wholly destr by fire. How the fire originated is unknown

Caledonia, March 12.—House of Robt. E kin, with most of the contents. Loss on cont $150; loss on building, $600. No insurance

Thorold, March 13.—The Thorold pot carried on by Messrs. Braden & Booth, formerly in the possession of Mr. William Ra was destroyed by fire. We have not been al obtain accurate information as to the exte the loss; but it could not have been very gre the establishment was not extensive.

Bosworth, Ont., Feby. 28.—Store of A Pr the stock was insured in the Waterloo Mutu $1,200, but the furniture and building were sured. The building was owned by Mr. Buch and is a total loss.

Seaforth, March 11.—Mr. Trainer's h Tuckersmith, was destroyed ; the building w stone.

Goderich, March 11.—A Goderich paper that the shed attached to the house occ Mr. Finley, teller in the Bank of Montreal discovered to be on fire. Before the hous enveloped in flames, Mr. Finlay had time move his family and most of his furniture. of the fire unknown. His loss we have not h but that of the house is about $800.

Dereham, Ont., March 7.—House of C. I on 2nd Con., with contents was destroyed insurance.

Toronto, March.—An old farm house o Cruickshank farm, and an adjacent shed, u a stable. The latter contained two horses were destroyed, said to be insured ; the f thought to be incendiary.

St. Catherines, March 15.—The Thorold Pottery, owned and occupied by Mr. Baker, in the eastern outskirts of the village, was destroyed by fire on Saturday night last. The amount of loss I have not learned, but understand it is fully covered by insurance.

Point Levi, 2 Feby.—A dwelling and store were burnt down through the explosion of a coal oil lamp. The owner had a narrow escape. The loss is about $3,000. The buildings were uninsured.

Brockville, March 6.—A fire originated in the rear part of the drug store of Mr. Fulford, under suspicious circumstances. The fire was extinguished with a loss of about $100. We are informed that Fulford has since left for parts unknown.

Ottawa, March 8.—A fire broke out in the attic of Joseph Skinner's drug store, and damage to the contents of the store to the extent of $500 resulted ; insured in the Western Assurance Co. for $1,000. Fire is supposed to have resulted from smoking.

Ottawa, March 3.—The roof and upper story of the building owned by Patrick Smith was damaged by fire to the extent of about $600 ; insured in the Western for $2,000.

Ottawa, March 12.—The frame store of Nicholson & Beeson caught fire. The contents of the cellar and the effects on the first flat were damaged. There was no insurance on the building, but the British America had $1,500 on stock, which consisted of packages, &c., done up in business-like style, but consisting mostly of saw dust, blocks of wood, &c. We were shown a sample of "Flavoring Extract," selected from their stock. It was beautifully labelled, and bore the name of a leading firm of druggists in Montreal, but, when opened, was found to contain a neat block of pine wood. The total value of their stock would, it is thought, amount to $40. At an examination of Beeson, at the Ottawa Police Court, charged with setting the premises on fire, he made a statement admitting his guilt.

Goderich, March 11.—Another destructive fire occurred here last night, in a frame block on the west side of the Market Square, owned by Dr. McDougall, and occupied by G. N. Davis, dealer in stoves, etc.; Mrs. Wilson, milliner; Thomas Sturdy, shoemaker, and Mrs. Mack, restaurant. The fire, which is supposed to have originated under Sturdy's shop, broke out about midnight. From the first it was evident that no part of the building could be saved, and the citizens directed their efforts to the salvation of the adjoining brick building, occupied by F. Jordan, druggist, and J. Harris, dry goods merchant, and to the removal of goods from the different shops in the burning block. Mrs. Mack saved most of her goods, but badly damaged; she was partially insured. Sturdy saved but a small portion of his stock; insured for $400. Mrs. Wilson lost nearly all her stock and household goods; partially insured. G. Davis' stock and furniture were very badly damaged in removal; loss unknown; insured for $1,500. F. Jordan's building was saved through the extraordinary exertions of the citizens and the favorable wind; but the stock was very much destroyed by removal; loss not known. As is generally the case, our fire engines could not be brought into action, owing to their being frozen up, or some other trivial cause. The buildings were insured. Had the wind and weather been less favorable, some eight or ten other stores, and probably the Bank of Montreal, would have fallen a prey to the devouring element.

Montreal, March .—A fire occurred in the dwelling over Clendenen's hardware store, in Craig street, by which the stock of the latter was considerably damaged.

Commercial Union.—The directors of the Commercial Union Assurance Company have resolved to recommend at the meeting on the 9th of March, a dividend for the past year at the rate of 15 per cent., with a bonus of 2s. 6d. per share, free of income tax, being at the rate of 7½ per cent. per annum.

Dismissed. — Mr. Drury has been dismissed from his place as Assistant Manager of the Provincial Insurance Company, with a *douceur* of three months' pay in advance.

Liverpool, London and Globe.—The available total at the end of the year's business is stated by the directors of this company at £211,237 17s. 11d., from which it is determined to take £117,525 12s. for distribution among the proprietors. This will yield a dividends for the year of 30 per cent, free from income tax.

Marine Losses.—The losses for February include 22 vessels—all American or foreign vessels insured at New York. Total value of the property burned, lost and missing estimated at $900,000.

	Vessels.	Value.

PUBLICATION OF SURRENDER VALUES.

The late recommendation by D. Parks Fackler of a system of endorsing the surrender value on a policy, appears to have met the favorable concurrence of some of the life companies, and will probably be adopted, *mutatis mutandis*, by most of them—half-note companies, it may be, excepted. This improvement—for anything having a tendency to make clear the precise financial relationship existing between the companies and their members, should be viewed in the light of an improvement—is of no pecuniary advantage to any one, as it merely sets forth the exact value of the policy at the end of each year, the next annual premium being due. The insured may at any time inform himself as to the cash value of his contract and the legal obligations which the company have assumed; or, if he should desire it, the endorsement will enable him to hypothecate his policy at any bank; or, more correctly speaking, it may be used as a collateral security of loans. As it is now, the surrender value of a policy is somewhat mythical, as no one outside of the company can tell exactly what it is, and the company generally exercise arbitrary rules in its estimation. The *exact* value of a policy is the amount of its reserve, but it is obvious that this amount is not paid. Policies lapsed or surrendered, work an injury to any company, notwithstanding it appears to be a source of congratulation that the offices have profited by them, for the ultimate loss to the company is obvious, as the surrendered policies are generally on the best lives, and the source of profit is incontinently stopped. But so long as the company holds an amount over and above the expense, and other cost of insurance, it is but justice to return it to the party from whom it was received; and, as every reputable office feels morally bound to return, when desired, the estimated value of the policy, either in cash or its equivalent, there can be no satisfactory objection to making known to the insured the amount to be expected in the event of a surrender, for the simple reason, if no other, that it may be made transferable to its fullest extent, and that any uncertainty as to its negotiable value may be removed.

Just so far, however, as it encourages the surrender of policies, it is mischievous; and it were better for the company to keep the insured uninformed as to the cash value of his contract, if such information tends to lessen the duration of it—a result more likely to occur among good lives than bad ones, and, as a sequence, the ultimate loss to the company would be greater.

The probable return would be about four-fifths of the reserve, deducting the obligations of the insured; provided, the second annual payment had been paid, for we doubt the practicability, or, at any rate, the expediency, of paying any consideration at an earlier period. The return values attaching to policies issued by a mutual company, should be estimated in connection with the loss which accrues indirectly to other members, and also the expense which was incurred in procuring the risk; but the equity of deducting the cost of replacing the risk might be questioned on the ground of injustice, for the insured has already paid the cost of it once. But it is argued that, as an appreciable advantage accrues to other members by the introduction of a new one, it is to their benefit to lessen the actual expense of the newly insured member by a contribution, which will eventually return to them; and, for this reason, if he should retire before they have been fully indemnified, it is but right that he should pay the cost of filling the vacancy. Upon this basis the St. Louis Mutual Life proposes to estimate all surrender values; that is, to deduct from the reserve the per centage on the premium, which the company would have to pay to replace the risk.

If this system is to prevail to any extent, and the auguries are that it will, a noticeable difference will arise from the valuations on the Actuaries at four per cent. and the American at four and a half, which will have a tendency to militate against its general adoption, if the difference in valuations should be sufficiently wide to enable agents to draw disparaging conclusions. This new feature has been adopted by the Brooklyn, of New York; Atlas, of St. Louis; and, we believe, by the National Life, of Washington. The Hon. Elizur Wright speaks most favorably of it, and recommends it as a plan that will show to the policy-holder why such large sums of money must be held in reserve to meet future liabilities.—*Western Insurance Review.*

Insolvents.—Zophar Locke, Goderich; Ulhric Jean Francœur, Sorel; George Brown, Goderich; William John Percy, Kingston; Lewis Houck, Whitby; Jno. Glassford, Barrie; Edwin R. Turner, Montreal; George M. Labaye, Compton Centre; Wm. Moss, Montreal; Duncan Campbell, Eldon; Henry J. Lawton. Montreal; R. A. & R. H. Jennison, Ravenshoe; Godfrey Gingras, Quebec; Alex. & Donald McDonnell, Cornwall; Wm. Hill, Cornwall; Thomas Grory Owen Sound; J. H. Brown, Brampton; Porlier & Porlier, St. John's; Irving & Hogg, Paisley; Marie Simard, Montreal; William Ennis, Montreal; James Hiscott, St. Catherines; R. H. Hudgin, Guelph; Andrew Morris, Montreal; John E. Fitzgerald, Fenelon Falls; Robert Scanes & Thos. Allan, Montreal; L. Lavoie, Quebec; Walter Brown & W. C. Chewett, Toronto; John Jacob Marshall, Ingersoll; David Henderson, London; Richard Pidgeon, Napanee; John Clements, Berthier; John M. Bowen, Napanee; Thomas McWilliams, Brougham; Geo. Church, Chatham; William Little & John Wilson, Guelph; Andrew Warner, Guelph; Alexander McKelvy, Chatham; Ninian Holmes, Chatham; John Creighton, Prescott; James Spratt Wilde, Napanee; Arthur & John Stickle, Waterford; Anaclette Bissonnette, Henryville.

Writs of attachment have been issued against Eli Spencer, James Armstrong & Alex. Sonter, and William Trent, Toronto; William Howe, Guelph; James Dallyn Hamilton, Wm. Truman, and Thos. Daville, Hamilton.

The wharf and dock property at Niagara have been again taken possession of by the Bank of Montreal, by a decision of the courts and are to be leased to Captain Milloy.

The Town Treasurer of Collingwood has been directed to deposit the whole of the funds of the town in the Bank of Commerce, Toronto, provided the usual interest be allowed.

F. W. Cumberland, Esq., Manager of the Northern Railway, has gone to Cuba for the benefit of his health.

THURSDAY, MARCH 18, 1869.

THE BANK CHARTER QUESTION — THE PARAMOUNT NECESSITY OF CONVERTIBILITY.

ARTICLE II.

The wisdom of man has not invented and never can invent, a system of banking that shall be so absolutely perfect as to be free from the consequences of human weakness and human error. To look after absolute perfection, would only be to chase a will-o'-the-wisp with the usual result of being landed in a quagmire. The best scheme of banking that can be devised will be insufficient to guard against occasional losses and disasters. To reduce these evils to the minimum is all that it is possible to accomplish. Occasions will sometimes occur when the temptation to forget these inevitable facts is strong; when, neglecting the possible, we shall be in danger of arriving at the impossible. Of this nature is the desire, which now has partial possession of the public mind, to see provided some absolute security for bill-holders. Nothing is more natural than such a desire. The whole community are virtually, if not legally, obliged to take bank notes, and few things are more desirable than that some positive material security should be given for their redemption. But here there is much more to be lost than gained by attempting too much. If banks are required to deposit with some third party, as security for their note circulation, a value equal to the whole amount of their notes, they will, by that fact, be deprived of the means of maintaining their convertibility. The first great essential of a sound and uniform currency will be gone. Ultimate security, or what is supposed to be such, will have been purchased at the frightful cost of present convertibility.

The necessity of providing for the redemption of the paper currency, whatever form it may assume, in specie on demand, is so paramount, and so well understood, that we do not expect to see it now denied. Whatever scheme of currency and banking may be presented to the Dominion Parliament, we may be sure that it will set out with the pretence of providing for the convertibility of the paper circulation. Any other course would, at the present time, be fatal to it. But there is great danger that, while professing to secure this great essential, it will, by its nature, render the continued maintenance of convertibility impossible. What will be necessary to see to will be that the scheme be such as not to be incompatible with continuous convertibility, but shall contain all reasonable guarantees for its maintainance. Mere professions on this point must go for nothing.—Even Law, whose "system" ran into the wildest and most extravagant excesses, set out with the declaration, in which he was joined by the Regent, that a banker who issued notes beyond his means of redemption, deserved death. But the moment Law's bank was made a Royal Institution, it began to do what was incompatible with continued redemption. The issues were at once increased from sixty to a thousand millions of livres. Law soon began to think, and the general insanity favored the idea, that paper could take the place of coin. Notes were issued on the deposit of shares. A run for specie gave birth to a decree declaring the notes to be worth five per cent more than coin. All transactions which would bring more than a hundred francs were compulsorily obliged be effected in notes. But no sooner had m chants taken the notes than they flew to bank to have them cashed. At last notes were made a legal tender. A furt reduction in the value of gold and sil was decreed.

Here, it will be seen, the notes were no means made a legal tender, at first. S by step the downward progress to bankrup and ruin went. The lesson is not without uses to us. It teaches us to watch narro and strenuously to guard against the f steps towards the rejection of the conve bility of the note circulation. Already government notes have been put to an for which they are, by their nature, unfit Certain amounts of them have been force the banks to be held in lieu of specie. is, in plain terms, a substitution of credi capital, and it is the first step on the roa ruin. It is the first blow to convertibi In other respects we have gone as far took Law some time to go. We made Government note a legal tender, at the s but that does not qualify it to take the p of specie. Confessedly there is only a s amount of specie at the back of it—only v is necessary to meet casual demands.

The main question which Parliament have to decide is so broad that we need waste time on nice distinctions, which s times enter into the discussion of econon questions elsewhere. We need not dally the doubt whether a convertible curr can ever sink below the value of the into which it is exchangeable at the wi the holder. It will be safe to assume tha depreciation can never be greater than fractional percentage chargeable, in the of exchange, to cover the cost of its car from the point where it is found in cir tion to the designated place of redemp This is seldom more than a quarter o per cent.; and if the issuers were unifo debarred from issuing at one point payable at another, for the purpose of structing convertibility, even this fra would hardly ever be payable. Indee cases in which it has to be paid now are rare. Not one man out of a thousand receives notes, requires to have them verted into gold. In receiving a bank which can be exchanged for gold, at th tion of the receiver, every one knows he is getting. It is not a thing to v one value is attached to-day and anoth morrow, and a third next week. It pa of the stability of the gold on which based. If a man agrees to pay or to re three months, six months, or a year he given sum of money, he knows pre what he has to count on. This cer

nports an element of strict justice and absolute security into all transactions in which money plays a part. No one can get advantage over another; no one suffers at e hands of another. There is the same easure for all.

With an irredeemable paper currency, all is is reversed. No one knows what the rrency will be worth from one day to anher. Under the greenback system of the ited States we have seen gold touch three ndred per cent.—that is it took three ndred dollars in Government paper curncy to buy one hundred dollars in gold—d we have seen it halting at every point tween that figure and about thirty per nt. premium. Imagine the chronic conion and daily and hourly injustice of such ystem, the uncertainty, the disappointment e legal robberies, frauds and misery of ich it is necessarily the parent. In France know that a much worse state of things s resulted from inconvertible paper money; t there was a time when a man with fifty lars of assignats in his pockets could rcely purchase the most meagre breakfast; en three thousaand dollars would not fice to buy a load of firewood, and a tune would be swallowed up in providing ecent family dinner.

t cannot be necessary to say more to prove t ultimate security would be purchased too rly at the price of present and continuous vertibility. And all provisions for ultite security are more or less delusive. sides this is not what the note holder efly wants; he wants this, but he also nts convertibility. Now, and in the fute let us suppose the ultimate redemption the note secured by a deposit somewhere Government securities. A bank breaks, it is necessary to realize on the securit, what becomes of the *bonâ fide* note lders in the meantime? Do they, as a y, await the process of winding up? Is it their power to do so? Before these stions are answered it is necessary to sider in whose hands the bulk of th bank or government note currency is efly to be found. It is well known that in th majority of large transactions, such notes he scarcely any share. Payment is made heques; and all the money that passes what goes to adjust the bankers' balances. k notes are mainly paid out for labour a in small trading operations. It thus hpens that the great bulk of the bank ne circulation is to be found in the nds of laborers, mechanics, and others of th poorer classes of the community. They eld not wait till the securities of a bank or gernment were realized to get the proceeds ne notes they held, at the time of failure. Their circumstances would compel them to sell at the moment of the greatest depreciation: they could not hold on a week, many of them not three days; and they would have to submit to whatever shave a moment of panic might enable speculative purchasers to extort. So that even if the notes were ultimately redeemed, the benefit would accrue, not to the *bonâ fide* holder, but to the speculative purchaser.

This is another reason, if more were wanted, why present and continuous convertibility should not be jeopardized, by embarrassing precautions for ultimate realization. No scheme which endangers or makes practically impossible the convertibility of the bank note should receive the sanction of Parliament, no matter how plausible soever may be the pretexts with which it is ushered into being.

THE INSOLVENT'S JUBILEE.

According to the good old common law of England, it was the duty of a debtor to pay his debts, and that duty was enforced by giving creditors a remedy, either against the person or the effects of the debtor. The bankrupt was considered in the light of a criminal, and Sir Edward Coke tells us that the name, as well as the wickedness, of bankrupts, was fetched from foreign nations. The old Romans had little pity for a man who failed to pay his debts, and allowed creditors to cut up their debtor's body, and then share the pieces. This not very pleasant way of paying old debts must have had a wholesome effect on all parties disposed to extravagance. Modern legislation has, however, raised the debtor from the level of the criminal; not only so, but the trouble now-a-days is to restrain legislators from investing the debtor with a sanctity which repels the touch of the profane creditor. A debtor, with the Insolvent Act in one hand, and the scalps of his creditors in the other, is a sight which, thanks to our humanity in legislation, is not rare or surprising. Every issue of the *Canada Gazette* teems with notices of application for relief under that Act, which instead of exciting surprise, naturally suggest the enquiry why everybody does not follow suit; the creditors being in the minority, a year of one-sided jubilee would be the consequence if that course were taken.

That the Insolvency Act has had a fair trial, none will deny. What is the experience of the country? We doubt if there is a man from Sarnia to Quebec who has had the opportunity of witnessing its operation and its effects who will pronounce it a success in aught but in affording to dishonesty the most ample facilities for carrying out its designs. Liberal principles lie at its base, the intentions of its promoters were good, the objects aimed at were proper, but it is now admitted on all hands that it is the bane of the honest, and a most fruitful source of public demoralization. From every part of the country a cry has gone up which Parliament cannot and should not disregard. Boards of Trade and Bank Directors in their corporate, and merchants and public men in their individual, capacity, have expressed their opinions on the subject with an unanimity as singular as it is impressive. The banker finds his trust and confidence met by strategems and threats; the wholesale merchant's calculations are thrown out of gear by twists and turns which ordinary, or even extraordinary, precautions cannot guard against; and the retail dealer is subjected to a species of competition which honesty cannot cope with. The old saying, "his word is as good as his bond" is dying, or has died, out. The successful insolvent of two campaigns is a hero in his way; the unsuccessful insolvent is called a fool, or too conscientious a person for this world. To pay one's debts with nothing indicates a higher order of business ability than to hand over assets for division among grasping creditors; while to fail for a large amount is a much surer passport to future eminence than to go down under a miserable petty sum of two or three figures. Far be it from us to say that honest men do not fail in business, or that a discharge is in every case a badge of disgrace. Honest men have their misfortunes as well as others, but honest men rarely need to chaffer and fight with creditors in this era of grace. The trouble is that the Insolvent Act takes in the chaff with the wheat, and the former seems to come out the sooner, while the latter is ground the more to make up for its companions' depreciation in yield. How many cases will occur to any one who chooses to count over the insolvents of his acquaintance, in which the emancipated debtor develops, like Jonah's gourd, from a sapless root into a veritable green bay tree? It would require a Hogarth to picture in fulness of detail the Before and After of Insolvency. But we all know how frequently the poor and much persecuted debtor, who has given up everything to a merciless set of cormorant creditors, as soon as his discharge is made out, springs at a bound into his old seat, and enjoys the luxuries of this life with quite as much appreciation, and has them to enjoy, in quantities quite as large, as his humdrum acquaintances who have not been subjected to the disagreeable (for the time) necessity of going through the form of satisfying debts. The fact is, it is quite unfashionable to pay debts, and while an Insolvent Act is in force, it is a useless piece of extraaagance. We would suggest that it might be well under

the circumstances to strike out the words "to pay" in promissory notes, and substitute for them the words "to satisfy;" then those coming from an old fashioned, honest region would not be so liable to be misled as they are now.

We admit that an Insolvency Act of some kind is a necessity under ordinary circumstances, but if it can be shewn that its good results bear but an infinitessimal proportion to its evil ones, it will not require much argument to make us doubt the expediency of having one at all. It is a principle of legislation that public interests must not be prejudiced even to cover cases of individual hardship. We cannot afford as a people to set a premium upon fraud. Let us see how the Insolvency Act may be and is made to work. A, an honest trader, has been in business, in say a village, for a number of years and has earned a character for integrity. B starts a rival establishment in the same village, and forthwith reduces prices to compel custom. He has no invested character—capital, and very little of any other kind; his goods were obtained on credit and they must be sold. He sells at "alarming sacrifices," for if the worst come to the worst, he has a haven of rest in the nearest Insolvency Court. His competition has the effect of bringing his name into the *Gazette*, but it has also the effect of ruining A.'s trade. The one comes from under the *débris*, hale and hearty, with more money in his pocket than he had before, while the other has lost everything; the one is ready to repeat the operation elsewhere, whilst the other with more conscience and shame than "energy and tact," ponders over how hard it is to be honest.

But we cannot, in justice, lay all the blame on the Insolvent Act. Who backed up Nichols and Robinson's gambling in gold, W.R. Brown & Co's gambling in gold, Connor's, Taylor's and Scott's gambling in barley?—Banks. Who support mere speculators without capital while drawing a tight rein on the careful ones who do a legitimate business? Banks. Who over insure stocks of goods and allow themselves to be led into insuring empty boxes, bottles and suppositious articles? Insurance Companies. Who give credit, indiscriminately, to every applicant, force goods on would-be honest dealers, and cry out most lustily when their sins come home to roost? Merchants. It is all very well to condemn the Insolvency Act; but with all its faults, with all its facilities to fraud, with all its perjuries, it is not the only, nor yet the greatest, cause of what we are pleased to term the demoralization in trade. While we seek to amend it—to remedy one set of evils—we must not overlook others quite as apparent, and quite as injurious, if we are in earnest in the endeavor to bring about a more creditable state of affairs.

OVERINSURANCE—FRAUD.

Facts which have reached us respecting several fires, of recent occurrence, involving serious destruction of property, and entailing consequent severe loss on several insurance companies, both local and foreign, justify us in saying that if a profitable result is to be expected from the prosecution of fire insurance in Canada, a closer surveillance must be exercised by companies over the actions of their agents.

There is every reason to believe that, at least three of these fires, were not the result of accident, but the work of incendiaries, who have sought, in the destruction of their property, relief from pecuniary embarrassment or insolvency. Experience has taught us that a depreciation of merchandize and manufactures, or a depression of business, combined with a too active competition between agents—leaving little or nothing at the risk of the insured, and indeed, not unfrequently, insuring in excess of the actual value of property—tends to open the door of temptation to overinsurance and subsequent fraud.

We are not ignorant of the difficulties with which an agent has to cope in his endeavours to satisfy himself, and do justice to his principals, in obtaining information on which their interest and safety materially depend. Enquiries which he would, perhaps, be anxious to make respecting the nature and condition of the property to be insured, the mode of keeping accounts, and other matters of vital importance are, we know, often regarded by the applicant as unnecessarily inquisitive, and resented accordingly. So that to secure business the agent is often tempted to forego his duty in relation to these particulars, and the result is, too frequently, as we have stated.

In one of the cases to which we have adverted there existed, at the time of the disaster, insurances to the extent of about seven-ninths of the invoiced value of the stock, one half of which, it is alleged, would not, had it been sold, have realized half cost, from the fact of its being by age, and consequent deterioration, rendered almost unsaleable. In another case where the premises were, as admitted, purposely fired, there was an insurance of $1,500 on stock which, on investigation, proved not worth $50.

We do not pretend to assert that an agent can, in all cases, make himself as thoroughly acquainted with the value and condition of every stock which is offered for insurance, as is desirable; or that he is supposed to know that nicely done-up parcels, representing l quors, patent medicines, and the like, a nothing but blocks of wood, papered a labelled in imitation of the genuine article or that chests, half-chests and caddies, su posed to contain the finest flavored and ch cest teas, are filled with saw-dust; but w do know that an agent, especially if a resi ent, ought, before assuming risks, partic larly if on stock, to use all laudable a lawful means to satisfy himself as to the m ral character and business capabilities of t applicant; to obtain, if possible, at least approximate idea of the amount of busin done, additional existing assurances, and oth particulars, as directed by his code of i structions, and which are essential to the i terest and prosperity of the company.

THE TORONTO MUTUAL.

This Company claims to have gained a p sition in two years which will compare fav ably with that of other mutual companies the longest standing. It possesses premi notes to the amount of $67,124 93, a issues no cash policies for periods longer th one year. The Company's exhibit is as f lows: Policies in force, 2,222; property i sured, $1,447,775; cash receipts for t year, $14,692 13; disbursements, $1 015 95; losses, $3,711 54; total liabiliti $21,649 47, of which $14,103 84 consist paid-up guarantee stock and reinsuran premium notes, leaving its total cash liabi ties on 1st January at $7,545 63, includi unsettled fire claims to the same date.

Its business is conducted on the str mutual principle, of charging every memb yearly with his exact share of all losses a expenses up to the day of assessment. has adopted the correct course of inspecti all risks systematically by its own travelli inspector, instead of trusting solely to t information, often deceptive, furnished agents; and seems to have taken precauti to secure a safe and respectable busine without venturing upon heavy risks, or th of a specially hazardous character. It wo be well for all institutions of the kind to t the same prudence and caution in the m agement of their affairs; in which case doubt they might stand much better with t public than some of them do at present. is not a little discreditable that a larger sh of our insurances are not undertaken companies domiciled within our own borde and that so much money is allowed to sent out of the country in the shape of f insurance premiums.

THE rival railway companies, the Welli ton, Grey and Bruce, and the Toronto, G and Bruce, have been taking legal adv respecting each others Acts. Mr. Hilly Cameron, Q. C., is of opinion that the p visional directors of the Toronto and Ni

ng Railway have exceeded their powers in ving bonds to municipalities to build their ne in a particular direction. Mr. Matthew ameron, Q. C., and Mr. Harrison, Q. C., nsider, however, that such bonds would be nding if the Company, after its organiza- on, accepted the bonuses on the faith of ch bonds. The Company, furthermore, not ask that the by-laws in aid of the road all be finally ratified until the companies ve been fully organized.

On the other hand, Mr. Hillyard Cameron of opinion that by-laws conditioned on the ying out of money, the location of route d stations, etc., are legal, and that buyers debentures issued under those by-laws ould hold them subject to the conditions the by-laws, neither principal nor interest ing collectable from the municipalities on ilure in the performance of the conditions. here this catches the Wellington, Grey and ruce Company is in the value of the de- ntures they have already secured under nditional by-laws. Such debentures are, Mr. Cameron points out, valueless as arketable securities.

MR. W. R. BROWN.

Mr. W. R. Brown is, by his own account, much injured individual. He has written letter from New York which contains an fer to return if his creditors will guarantee m from arrest. He considers that Mr. raham, the cashier of the City Bank, was ilty of "extortion" in compelling him to ttle-up his over-draft account of from $40, 0 to $60,000. We believe we are correct saying that his account was kept open ainst the wish of Mr. Workman, the Pre- lent, Mr. Brown to the contrary, notwith- anding. Mr. Graham's "annoyances" led r. Brown to make an arrangement with the oyal Canadian. Mr. Brown's indignation the "treachery" of the Royal is rather dicrous, and his bombast about the business his "house" proves nothing but the spe- lative character of what he did. Mr. ewett says he knew nothing of the state W. R. Brown & Co. when he became a ember of the firm; Mr. Brown asserts that was not aware, until some time after, that r. Chewett had made the settlements upon s wife. Previous to "my unfortunate rtner's" entering the firm, Mr. Brown's sses on gold gambling had reached $55,000, d on 21st June last, when he went to New ork, he had to sell his plate and some arti- s of furniture, to procure the means to go ere. So that W. R. Brown & Co., while terly insolvent, had the audacity and dis- nesty to accept money on deposit. He unsels his creditors to "cease their malice d persecution, and unite against one com- mon enemy." The advice is pleasant, consi- dering the source whence it comes, and if taken we incline to the opinion that Mr. Brown will be the "enemy" selected.

MR. WM. SMITH, late manager of the Gore Bank at Woodstock, has been appointed Accountant in the Bank of Commerce, To- ronto, in the place of Mr. Sampson who goes to Woodstock as manager of that branch of the Bank of Commerce.

NORTHERN ASSURANCE.—This Company was established in 1836, and has a capital of £2,000, 000 sterling. Its accumulated funds amount to £850,000 : in 1867 the fire premiums footed up to £160,000, and the losses to less than 50 per cent of that sum. Its affairs seem to be con- ducted with care and prudence, and it is under- stood to be a thoroughly sound office. It is both a fire and a life company, but only fire business is done here, and none but the better class of risks is accepted.

Communications.

THE BEAVER MUTUAL.

To the Editor of the Monetary Times.

SIR,—I perceive that under the above heading, in your issue of the 11th inst., you say, in refer- ing to the case of Findlay vs. Beaver Mutual, tried at the last Barrie Assizes: "It turns out just as we expected, that the defence was based on a true sense of what is due to the honestly disposed portion of the community. The plaintiff had mortgaged his property without notice to the Company, and when a fire occurred under such circumstances, the Company decided to stand on their rights." You surely, sir, could not have carefully perused my letter to the daily *Globe* of the 19th October last, the statements (all of them susceptible of proof) in which have never been denied by the Company, or by their solicitor, to whose letter in the *Globe* a few days previously, mine was a reply.

I ask you, sir, if after reading both the letters above alluded to, and which embrace all that the public know of the matter, you can reiterate the remarks I have quoted. No doubt you have made these remarks upon the strength of the Company's annual report, published in the same issue; but what does this report (so far as this case is concerned) amount to, when my letter to the *Globe* is left unanswered?

In justice to my client, (the plaintiff), I ask your insertion of these few lines. Yours, etc.

J. A. ARDAGH.

Barrie, March 15, 1869.

Financial.

TORONTO STOCK MARKET.

(Reported by Pellatt & Osler, Brokers.)

The market has been very dull during the past week, particularly in bank stocks, many of which close slightly weaker.

Bank Stock.—Montreal has been freely dealt in at 140½ and 140¾, and closed firm and in demand at 141. There are buyers of British at 104½, and no sellers under 105½. Ontario has been sold to a limited extent at 100 to 100½, to-day (the 16th) there is an enquiry for the stock at par. Small amounts of Toronto are offering at 121, but buyers will not give over 120½. Nothing doing in Royal Canadian; offering at 80. Commerce is offering in limited amounts at 103; no demand. There are sellers of Gore at 41, but no buyers. Sales of Merchants' have taken place at 108¼, 108½ and 108¾, there are no sellers now under 109. There are buyers of Quebec at par, and no sellers. Molson's is in active demand at 113½, sellers hold- ing for 114. Sales of City were made at 103 and 103¼, there are now buyers at the latter rate and sellers at 104. No Du Peuple in market; buyers would give 107½. The same price would be paid for Nationale; none offering. Jacques Cartier could be placed at 109. For Union 104½ would be paid; none in market. Other banks nominal as quoted.

Debentures.—Canada are slightly lower; fives are offering at 94½, sixes are in little demand at 102 to 103. Dominion stock is in demand at 105½. Toronto are very scarce and could be readily placed to pay 6% per cent. Long dated County are readily saleable at par.

Sundries.—City Gas has been sold at 108 and 108½, there are still buyers at 108. British America Assurance is enquired for at 55½, no sellers under 56½. Large sales of Canada Perman- ent Building Society were made at 126. Small transactions in Western Canada B. S. occurred at 121, at which rate it is still procurable. Free- hold B. S. has been freely dealt in at 110 and 110¾, there are still buyers at 110½. Canada Landed Credit has further advanced with sales at 77 and 78. Mortgages have been more freely offered than for some time past. Money is in good demand.

STOCK SALE IN HALIFAX.—At Mr. W. M. Gray's stock sale on the 9th, by J. D. Nash, the follow- ing prices were realized : 50 shares People's Bank, $28.50 ; 16 Union Bank, $56.25; 2 Bank of Nova Scotia, £70 5s. 0d ; 15 Halifax Fire Insurance Co. £10 11s. 3d. ; 3 Bank of British North America, £70 3s. 9d. ; 3 $109 City Water Debentures, $105.

—The St. John *Globe* says that at an adjourned meeting of the stockholders of the Commercial Bank, the Directors submitted a satisfactory statement, showing that since November last, the liabilities of the institution had been reduced virtually 50 per cent.

Railway News.

NORTHERN RAILWAY.—Traffic receipts for week ending February 6th, 1869.

Passengers	$2,178 59
Freight and live stock	5,163 48
Mails and sundries	190 94
	$7,533 01
Corresponding Week of '68.	5,985 05
Increase	$1,547 96

GREAT WESTERN RAILWAY.—Traffic for week ending February 26, 1869.

Passengers	$21,349 93
Freight	31,555 20
Mails and Sundries	1,138 75
Total Receipts for week	$54,043 88
Coresponding week, 1868	51,632 09
Increase	$2,411 79

MISSISSQUOI RAILROAD.—On the 3rd instant, the Directors of the Mississquoi Railroad held a meeting at Newport, Vermont, for the election of officers, at which the Hon. Lucius Robinson, of Newport, was elected President ; Col. O. N. El- kins, North Troy, Treasurer, and Mr. Allen, At- torney at Law, of Newport, Secretary ; the choice in each case being unanimous. This road com- mences at Newport, Vermont, in connection with the Passumpsic Railroad, and is to connect with the South Eastern Counties Junction Railroad at the Province line at Potton. Operations on the railway have commenced.—*Montreal Herald.*

Law Report.

An Insurance Policy Decision. The Supreme Court of Illinois has recently rendered a decision of considerable importance to insurance interests, concerning the power of insurance companies to vitiate policies. The case involved was that of a butcher, (or rather the keeper of a meat shop), who kept a keg of saltpetre in his shop, notwithstanding that the terms written in his policy of insurance declared that the keeping of saltpetre should vitiate it. It also appeared that on one occasion he sold a quantity of saltpetre to a customer. The proof showed that it was customary for dealers in meat to use saltpetre in small quantities in their business. The court held that such customary use of the article implied a knowledge of the fact on the part of the underwriter; and that the mere fact of use, or of keeping for use, in a reasonable quantity, would not vitiate the policy. But a keg of saltpetre was, under the proofs, more than a reasonable quantity, and the fact of selling to a customer made the butcher a dealer in the article to such an extent as clearly to render the policy void under its terms.

SALE OF STOCK—DIVIDENDS ACCRUED.

In a case of Currie *vs.* White, in the Supreme Court of New York (March 4), it appeared that the defendant sold to the plaintiffs, by a contract dated February 18th, 1867, 1,000 shares of Hudson River Railroad stock at 128, the purchaser to pay interest on the purchase money, and the vendor to deliver, at his option, at any time during the year 1867. While this contract was pending, and in April, 1867, the capital stock was doubled, by the issue of new shares, each stockholder receiving a number of new shares equal to the number of old shares held at the time of the increase, on the payment of fifty per cent in cash. The whole of the new stock was taken by the stockholders on these terms. Dividends were also declared and paid in cash, as follows: On the 15th of April, 1867, four per cent. on the old stock, and on the 15th of October, 1867, four per cent. on the stock as increased, on both the old and new.

On the 18th of December, 1867, the vendor gave notice that he would perform his contract, and tendered the first 1,000 shares, and demanded the contract price—128 and interest. The purchasers offered to take the stock and pay this price, and also demanded the second 1,000 shares of the new issue, and the cash dividend. The vendor refused to comply with these demands, or to deliver the first 1,000 shares.

The plaintiffs, the purchasers, then sued to recover damages for the non-delivery of the first 1,000 shares mentioned in the contract, claiming the difference between the contract price, 128, and the highest price, 149, which the stock had reached before the trial; and also claiming the value of the second 1,000 shares, the new issue, less the price, 50, at which the same had been issued, and also the dividends.

The purchasers claimed these on the ground that they paid interest on the purchase money from the date of the contract, and were, therefore, entitled to the dividends and advantages accruing to the stock while it remained in the owner's hands awaiting delivery.

The Court, at special term, Jones, J., decided against these claims of the plaintiffs, and held that the contract was executory, operating as an agreement to sell, to be carried into effect on a future day; that the dividends declared and the additional stock issued became the property of the owner of the stock at the time they were declared and issued; that the owner did not, by such a contract, deprive himself of any profit which might accrue from the property, or of any advantages which might arise from its possession or use during the time he held it under his option to deliver; and that such profits or advantages did not pass to the purchaser in the absence of an express contract that they should pass.

He also held that the measure of damage which the purchaser could recover on a breach of contract by the vendor was the market value of the stock on the day of the breach, and not the higher value which the stock might reach before the trial; that the market value on the day of breach was not equal to the contract price and interest, and that therefore the purchaser suffered no actual damage.

The plaintiffs appealed from all this decision to the General Term, and argued that the agreement to pay interest on the purchase money, from the date of the contract, controlled its interpretation.

That the contract contemplated that there was something existing to be bought and sold; that 1,000 shares of the stock, as it existed at the date of the contract before the increase, was the existing thing sold; that the vendor must deliver, with the stock, all the dividends and accretions which he has received pending the contract; and that his contract was not satisfied by the delivery of 1,000 shares of the stock after the increase.

That the agreement to pay interest bound the purchaser to keep the purchase money at all times in readiness to answer the vendor's demand for it, and also to pay interest on it; and that the vendor must be held to the reciprocal obligation of performing as at the date of the contract, and of delivering the stock as it then existed, with all the increments; that the purchaser's rights attached to the stock as it existed at the date of the contract; and that although the contract on its face bound the purchaser to pay the interest, and did not bind the vendor to deliver the dividends and accretions, such an obligation, though not expressed, could be implied as a correlative and reciprocal obligation.

That the vendor in this case, having received the dividends and increased stock, must deliver the same. The plaintiff's counsel cited many cases showing that where the purchaser had paid interest he was entitled to the increase, where that increase had accrued to the property in the shape of dividends, rents, additions to insurance policies, and to estates by the dropping of lives; and that it was inequitable that one party should receive interest, and also the profits and increase from the possession of the estate.

That the thing sold was the stock as it stood before the increase of the capital; that the new stock was issued one-half for cash and one-half as bonds; that to allow the defendant to perform his contract by the delivery of 1,000 shares of the stock, after such an increase, would be like allowing a man who sold 1,000 gallons of specific wine to mix that wine with 1,000 gallons composed one-half of the same wine and one-half water, and then to deliver 1,000 gallons of this 2,000 gallons of compound in performance of his sale; or to allow a man to sell stock before it was watered, and then to perform his contract by a delivery of watered shares.

They also claimed that the defendant had broken the contract, and that the plaintiffs were entitled to recover the highest market value of the stock, after the breach and before the trial, as the just measure of damages.

Failures in Montreal.—A despatch dated March 15 says Smyth & Edminston, large boot and shoe manufacturers in McGill street, stopped payment to-day; liabilities stated at $108,000. One of the partners in the firm of C. Dorwin & Co., brokers, left the city on Saturday, and his whereabouts cannot be discovered. It seems to be a fact that this old house has also suspended, and it is stated that Mr. Dorwin has taken $8,000 with him. Extent of liabilities not ascertained. Mr. Dorwin's partner, Mr. Gault, is still here.

— The Propeller, Georgiana was sold at Montreal, a few days since, to Mr. W. M. H. Irish, for $8,500.

MONTREAL CIVIC AFFAIRS.

At the installation of the Mayor of Montreal, W. Workman, Esq., the following statement was made by him respecting the city affairs:

The financial statements, which in a few days will be laid before you, will exhibit the affairs of the city in a most prosperous condition. Notwithstanding that the city of Montreal, in comparison to other cities on the continent, is very lightly taxed, our revenue is ample for all purposes, and without any increased burthens upon the citizens, is annually increasing.

In the year 1866 it was	$621,8
In the year 1867 it was	705,67
And the year just closed, 1868, it has risen to	812,30

Our floating casual indebtedness to banks and other sources has been paid off; and had it not been for the very large amount we have, from the operation of the expropriation law, been compelled to deposit in Court for expropriation purposes, our cash account would exhibit a large balance on hand for employment, if we thought fit, in the redemption of our immatured bonds.

Whilst, upon the one hand, the actual revenue of the city exhibits these pleasing features, the consolidated liabilities and fixed assets of the Corporation, exhibit results which are not less gratifying. Although the present bonded or consolidated debt of the city is put down, in round numbers, at five million of dollars ($5,000,000), it is strictly speaking, not more than one million, because we have in fixed property and actual *bonâfide* assets, the safe representative of four millions, yielding a corresponding revenue, so that in reality our taxation has only to provide for the interest on one million. That these gratifying results are properly appreciated in the financial world is fully demonstrated by the present price of our city obligations, as compared with other securities and with former years, in our money market — our seven per cent Consols having reached a premium of ten per cent.

It is to be hoped that the doubts and anxieties which have so long pervaded the Council, and the city generally, upon the question of the water supply, have found a solution, and will soon entirely disappear under the successful application of steam power, and an auxiliary pumping force. The present temporary derangement of this power, consequent upon some defect, not in the engine, but between the engine house and supply basin or settling pond, though certainly very inconvenient at this season, ought not to discourage, inasmuch as such "contretemps," or mishaps, are almost inseparable from new enterprises of the magnitude. All intelligent, impartial judgment will discern that a defect or derangement in the supply pipe which brings the water to be pumped would easily derange breast wheel, turbine wheel, steam, or any other power, and should, therefore, not be chargeable as an inherent defect against any of these modes of pumping. I entertain no doubts myself that in a few days the defect will be repaired, and the steam engine be again permitted to proceed with its work, fill the reservoir and supply the city as before. Let us earnestly hope that during the coming year our progress will be to good results and further improvements in this important service may be equally successful, and that ere long a permanent and abundant supply of water, at all seasons of the year, may be secured to the city.

Our fire force and fire alarm system are equally creditable to the city. In true efficiency and prompt action in extinguishing fires, they are perhaps, unrivalled on this continent; and with such perfect discipline and working as they exhibit, it is difficult to see, under a proper supply of water, how any extensive conflagration could again afflict our city. Everything in relation to the administration of these most important departments reflects credit upon all connected with them.

Notwithstanding the increased vigilance of the sanitary police, the public health of the city is still far from satisfactory. The death rate last year rose to within a fraction of 40 per 1,000, or 1 in every 25 ; that of Boston averaging 1 in 44, and the island of Montreal, outside the city, 1 in 66. The average weekly death rate of children last year, in winter, was 64 per 1,000 ; in spring and autumn, 90 per 1,000 ; summer, 146 per 1,000, which rose in one week to 209 per 1,000, against one winter week of 44 per 1,000. These results show how much in this important department is yet to be done. Our Health Committee should have power to prohibit the erection of dwellings upon low or swampy ground, without proper drainage ; and our inspector of buildings should be empowered to prevent the construction of any building, intended either for factory or dwelling, without proper regard to ventillation through and through. All wooden drains should be taken up and replaced with good vitrified clay pipe. Sewers and drains should be ventilated at their highest point, and trapped and flushed in warm weather, and every means taken to prevent the people from saturating the soil in their yards and courts with slops and filthy water.

As previously shown, our city is rich in means for all the necessary discipline and requirements towards perfect efficiency in every department. The revenue for the year just closed exceeds by over a hundred thousand dollars that of the previous year ;—it is $812,300. The chief items of expenditure during the past year are as follows :

Roads		$138,429
Water	$74,994	135,471
Do. Permanent Works..	60,477	
Fire		24,811
Light		18,634
Health		5,818
Police		74,088
Recorder's Court		10,312
		$407,563

Commercial.

Toronto Market.

Business continues generally quiet; in the retail department there are loud complaints of dullness. For several days the produce trade has been in a state of panic. Prices of wheat, barley and peas have undergone a serious decline as our quotations show, greatly augmenting the losses previously incurred from the late steady downward tendency in prices. Confidence has been shaken by the sudden disappearance of Mr. W. Taylor, a dealer who for the past season occupied a prominent place, principally as a dealer in barley, which he bought and sold to a very large extent. He has always been regarded as a reckless operator, and this quality brought him to the verge of bankruptcy before. It is quite impossible to ascertain the extent of his assets or liabilities, as he has carried his books off with him. The Liebee Bank is supposed to be a considerable sufferer; other banks are no doubt short to some extent, and one individual loses some $4,000. Money was raised on fraudulent warehouse receipts issued by a party named Scott, who had possession of Church-street wharf. Mr. Scott has also left the country. Since this escapade all produce paper has been closely scrutinized by the banks, and a good many refusals have been given.

GROCERIES.—There was a decided improvement in business as compared with last week. *Teas*—are in better demand and some lines are moving pretty freely for both city and country trade. *Sugars*—are easier, all grades of yellow refined can now be purchased on the basis of 10¾c. for No. 2½; stocks of raw are uncommonly light, and very few brands, and in consequence, the market is firm. *Syrups*—are firm, not having sympathized with the decline in sugar, owing to scarcity. *Tobaccos*—are firm, with a prospect of an advance of 5 to 10 per cent., consequent upon a rise in the price of leaf in the Southwestern States. *Fish.*—With the approaching end of the Lenten season the demand has fallen off, and the market is pretty well cleared out. *Fruit*—nominal.

GRAIN.—*Wheat*—Receipts 4,900 bush., and 6,800 last week. The market is in an unsettled and panicky state, in consequence of the failure and flight of a prominent operator and a warehouseman, who had issued to him fraudulent warehouse receipts. Produce paper is scanned by the banks with unusual care, and money, so far as produce operators are concerned, is tight. Spring wheat is dull and nominal, no car loads offering and no demand; on the street 80 to 85c. is paid for sleigh loads. Fall nominal at 85 to 90c.; none offering. There are no buyers of either spring or fall, and in the present state of the market holders think it useless to offer. *Barley*—Receipts 900 bushs., and 1,750 bushs. last week. The market is unsettled and sales are difficult to make except in small lots; it is nominally worth $1.15 to $1.25; four cars sold at $1.20 free of charges, and one car at $1.25. *Peas*—Receipts 500 bushs., and 1,000 bushs. last week. Car loads are offering at 70c., without buyers; on the street 65 to 73c. was paid. *Oats*—Receipts 1,200 bushs., and 2,533 bushs. last week. Oats are selling at 49 to 50c. on track, but there is no demand. *Rye*—Selling on the street at 65c. *Seeds*—Timothy is quiet at $1.75 to $2.25 for common, and $2.50 to $2.75 for No. 1. There is a fair demand for clover at $6.50 to $7. Flax is worth $1.75 to $2, and tares the same price.

FLOUR.—Receipts 1,475 bbls., and 6,800 bbls. last week. No. 1 superfine is dull and offering at $4 in store, with a limited demand at about that price; a lot of 800 bbls. sold at $4 in store. In other grades there is nothing doing.

PROVISIONS.—*Butter*—No. 1 lots are a ready sale at 20 to 23c.; common and inferior lots are not saleable. *Pork*—Mess is offering at $25.75 to $26, not much demand; some business was done at $25.50 to $25.75. *Cutmeats*—Unchanged. *Dressed Hogs*—Are in good demand, but are scarce. *Eggs*—Packed are selling at 15c.

FREIGHTS.—Rates by Grand Trunk Railway:—Flour to all stations from Belleville to Lynn, inclusive, 35c., grain per 100 lbs. 18c. ; flour to Brockville and Cornwall, inclusive, 43c. grain 22c. flour to Montreal 50c. grain 25c. ; flour to all stations between Island Pond and Portland, inclusive, 85c. grain 43c. ; flour to Boston 90c., gold, grain 45c. ; flour to Halifax $1.10, grain 55c; flour to St. John $1 02. Boxed Meats to Liverpool per gross ton 80s. ; lard or butter in tinnets 85s. ; Pork 11s. per tierce ; flour 5s. 6d. per barrel ; grain 12s. per 480 pounds. Grain to Bridge 13c., gold; thence to New York 47c, U. S. currency; to Boston 51c. Grain, Toronto to Detroit, 18c. per 100 lbs; flour 35c per bbl.

Salt Production in the United States.

The Chicago *Republican* has the following interesting accounts, embracing statistics of the salt product of the Saginaw Valley and the Onondaga Springs. It is peculiarly satisfactory to notice the marked improvement in the business of manufacturing salt in the Saginaw Valley. Our saline waters are an inexhaustible resource; the product they afford take away none of the natural wealth of the country, while their development has had the effect to render valuable for staves and heading many varieties of timber of but little worth before, and the immense quantities of fuel consumed in the kettle boiling process in particular, has caused the clearing of thousands of acres of land, which is thus being brought rapidly into profitable use for agricultural purposes.

From 1864 to 1866 there was a falling off in the saline product, the number of barrels manufactured in 1866 being 58,359 less than the number manufactured in 1863, even, and 121,076 less than the number manufactured in 1864. In 1867 there was an increase of 66,734 barrels over the product of the previous year, and last year, 1868, the product exceeded that of any former year, 26,617 barrels, being the excess over the product of 1864, up to this time the leading year in the salt business.

The following summary of the manufacture of salt since the business was inaugurated is given :

	Barrels.
1860	4,000
1861	125,000
1862	243,000
1863	466,356
1864	529,073
1865	477,200
1866	407,997
1867	474,721
1868	555,690

Nine years ago the first barrel of salt was made in the Saginaw Valley.

The Saginaw and Bay Salt Company, which has handled four-fifths of the salt shipped from the Saginaw Valley during the past year has shipped and sold 382,352 barrels, of which 41,360 barrels were home sales. Chicago received and consumed the largest amount, and Cleveland and Toledo next. The company have agents at every port of any consequence on the lakes, and also at inland cities. The amount delivered to the association during the season is as follows:

	Barrels.
First District (Bay county)	153,141
Second District (part of Carrollton)	57,990
Third District (Rochester Works to Buffalo Salt Company's Works)	74,507
Fourth District (all works south of above	139,194
Bought by Company	17,141
Total	392,335

Production and Stock of Petroleum.

From the monthly petroleum report of the Titusville *Herald* we take the following table which shows the production during February, the average per day, the production previously reported in 1869, and the average per day since Jan. 1st:

Total shipment of Crude for February of bbls., of 45 gallons each bbl.	252,415
Add to reduce to bbls. of 43 galls. each, bbls.	11,740
Total shipment of bbls. of 43 galls. each, bbls.	264,155
Stock on hand Feb. 1st, bbls.	274,167
Stock on hand March 1st bbls.	282,450
Add increase on March 1st, bbls.	8,283
Total production during February, bbls.	272,438
Average per day for 28 days, bbls.	9,765
Production previously reported, bbls.	315,953
Total product since January 1st, bbls.	588,391
Average per day for 59 days, bbls	9,973

On the 1st of March there were 334 wells being drilled, seven less than on the first of February.

Exports of Petroleum.

Exports from New York from Jan. 1, galls.	7,746,040
Exports from New York same time last year, galls.	7,575,024

The following is the quantity exported from other ports, Jan. 1 to March 6:

	1869.	1868.
From Boston.....galls.	536,439	418,260
Philadelphia	3,454,032	3,568,985
Baltimore	73,654	205,155
Portland		6,800
Cleveland		
Total	4,061,125	4,199,200
Total exports from the U.S.	12,115,233	11,835,963
Same time in 1867		7,025,889
Same time in 1866		9,762,291

Halifax Market.

BREADSTUFFS.—We have to report a more active demand for Flour during the past week.—Stocks at Outports are now somewhat reduced, and orders come forward more freely. Purchases are made only for immediate use, as lower prices are looked for. Our Stocks are still large, with less liberal receipts. We quote white wheat extra (fall) $6.75 to $7.00; fancy $6.25; bakers' strong $5 90 to $6.00; supers. $5.70 to $5.75; No. 2 $5.00; middlings $4.25 to $4.35; Pollard's $4.00 to $4.15; rye $4.75 to $5; cornmeal K.D. $4.15; F.G. $4.00 to $4.10; oatmeal $7.00 to $7.25.

WEST INDIA PRODUCE.—The market is still excited, and several offers for cargoes to arrive, have been refused, holders views differ largely from buyers, and sales for home consumption have been very limited. A cargo of molasses was offered at Auction last week, and 36½c. (in bond) offered for a parcel, but the lot was withdrawn, and has since been shipped. Higher prices are looked for. Sugars continues firm, with light stocks. Rum is somewhat firmer. The imports for the week are 50 puns. molasses; 69 puns. rum; 20 bbls. sugar; 4 bags coffee. Exports 160 hhds. 205 bbls sugar; 5 puns. molasses; 80 bags coffee; 11 bags cocoa. We quote:—sugar V.P. 9¾c. to 10c.; Porto Rico 9¼c. to 9½c.; Cuba 9c. to 9¼c.; Barbadoes 9c.; molasses, Cienfugos 40c. to 42c.; Trinidad 38 to 40.; rum (in bond) Demerara 58c.; coffee—Jamaica 13c. to 15c.; St. Domingo 10 to 13c.

EXCHANGE.—Bank drafts London 60 days at 13 ℘ cent.; Montreal sight 4 ℘ cent; New York gold 3 ℘ cent.; currency 20 ℘ cent. disct.; St. John, N.B. 3 ℘ cent. premium.—*R. C. Hamilton & Co's. Circular, March* 3.

Shallow Harbors.

A petition addressed to the Dominion Minister of Public Works is being signed by lake captains and others, and sets forth "that in consequence of the large class of vessels now navigating the lakes, and the low state of the water, the depths of the harbors of Port Colborne and Port Dalhousie are not sufficient, and in consequence vessels cannot pass these harbors drawing their full capacity; and in many instances vessels entering Port Colborne harbor have gone ashore, and vessels and cargoes have proved a total loss; and in some instances vessels have been detained from one to two days waiting to be lightened into the harbor; large vessels have also been frequently detained at Port Dalhousie in consequence of having to lighten out of the harbor at a heavy expense. For this reason many of the larger class of vessels are diverted, whereas, if the dimensions of these harbors are increased they could return to it.

"We, therefore, pray that you will cause them to be increased in depth, also their dimensions extended, as much damage is occasioned and delays frequently ensue in consequence of their being filled with vessels during adverse winds.

"And we beg respectfully to suggest that no expenditure be made towards the construction of a harbor of refuge upon Lake Erie until these harbors are completed to their utmost capacity, as the vessels trading upon the lakes have much greater interest in having these harbors increased than in the expenditure of money in providing harbors of refuge, as Long Point, on Lake Erie, now furnishes a harbor of refuge from various winds.

"Your petitioners would also pray that you employ a double set of lock masters, or a sufficient number of men, independent of the vessels' crews, to work Port Dalhousie lock and lock No. 2; also Port Colborne and Allanburgh locks, as vessels' crews are actually required at all these points in getting vessels in readiness to pass through the canal. And," etc.

Syracuse Salt Manufacture in 1868.

The total amount of salt inspected at Syracuse during the year 1868 was 8,666,616 bushels of fifty-six pounds each. Of this 2,027,490 bushels were made by solar evaporation, and 6,639,126 bushels by artificial heat. The amount manufactured in 1867 was 7,595,565 bushels; increase this year over last, 1,071,051 bushels. The State collected revenue duties, 1c. per bushel, $83,666.36, and penalties, $164.39. Total revenue, $86,830.76. The expenses of pumping water and cost of the inspection was $45,586.70, leaving a net revenue to the State of $37,244.06. The aggregate production of salt at Syracuse for the ten years ending with 1868 has been 73,869,715 bushels, an average of 7,386,971 bushels annually.

Trade in Sugar Shooks.

The shipments of sugar shooks from St. John to the West India Islands in the years named were:

In 1865-6..	481,116
1866-7	766,554
1867-8	813,831
1868-9	882,378

Before New Brunswick entered into the manufacture and exportation of shooks, Maine enjoyed a monopoly of the business. Since then, while our exports have been increasing, those of Portland, Me., have been falling off. Thus in the season, extending from October, 1867, to June, 1868, Portland shipped to Cuba as follows: Havana, 172,692; Matanzas, 348,231; Cardenas, 130,445; total, 651,368. In the season extending from October, 1868, to February 18, 1869, as follows: Havanna, 74,377; Matanzas, 179,006; Cardenas, 56,594; total, 310,977.

The Suez Canal.

From St. Petersburg to Ceylon, the centre of the India trade, via the Suez Canal, the distance is 8,600 miles; from London to Ceylon, 7,306; from Marseilles, 5,500; from Constantinople, 4,700; from Ceylon to Canton, 3,000 miles; total from London to Canton, via Suez, 10,300. London to Canton via the Pacific Railroad, 13,500; London to Canton via Good Hope, 16,160; Canton to San Francisco, 7,000 miles; San Francisco to New York, 3,500; New York to London, 3,000; New York to Canton via the Pacific Railroad, 10,500; New York to Canton via Suez, 11,500; New York to Canton via Panama, the same, 11,500; New York to Canton via Good Hope, 16,400, via Cape Horn, 21,709. The Suez Canal, says a contributor to the Washington *Chronicle*, will not only be the shortest and cheapest route from all parts of Europe to the Indies and China, but it will be the cheapest route from our Atlantic ports for the same trade. The average distance from Europe to the Indies and China via Suez will not be half as great as the distance via the Pacific Railroad, with 3,000 miles of transportation by rail, with two reshipments, the cost of land carriage alone being more than three times the entire cost via the Suez Canal, with no reshipments. Our Western States will be supplied with Eastern goods, teas, coffees, silks, etc., by direct trade through San Francisco. New York and other Eastern cities will merely supply the immediate Atlantic States, and an immense domestic trade will be lost. To make up for this change and loss of trade through the completion of the Suez Canal and Pacific Railroad, it becomes of paramount importance that the Atlantic and Gulf States should make immediate efforts to construct a canal across the Isthmus of Panama. The distance from New York to Canton by this route is the same as by the Suez Canal, but it would be far preferable for sailing vessels on account of the dangers of the Mediterranean and Red Seas.

The Mercantile Agency,

FOR THE

PROMOTION AND PROTECTION OF TRADE

Established in 1841.

DUN, WIMAN & Co.

Montreal, Toronto and Halifax.

REFERENCE Book, containing names and ratings of Business Men in the Dominion, published semi-annually. 24-1y

Western Canada Permanent Building and Savings Society.

OFFICE—No. 70 CHURCH STREET, TORONTO.

SAVINGS BANK BRANCH,

DEPOSITS RECEIVED DAILY. INTEREST PAID HALF YEARLY.

ADVANCES

are made on the security of Real Estate, repayable on the most favourable terms, by a Sinking Fund.

WALTER S LEE,
5-1y *Secy. & Trees.*

James C. Small.

BANKER AND BROKER,

No. 34 KING STREET EAST, TORONTO.

Sterling Exchange, American Currency, Silver, and Bonds, Bank Stocks, Debentures and other Securities, bought and sold.

Deposits received. Collections promptly made. Drafts on New York in Gold and Currency issued.

H. N. Smith & Co.,

EAST SENECA STREET, BUFFALO, N. Y., (correspondent Smith, Gould, Martin & Co., 11 Broad Street N.Y.,) Stock, Money and Exchange Brokers. Advances made on securities. 21-1

THE CONNECTICUT MUTUAL

LIFE INSURANCE COMPANY,

HARTFORD, CONNECTICUT.

WOODBRIDGE S. OLMSTEAD, SECRETARY, | GUY. R. PHELPS, PRESIDENT,
EDWIN W. BRYANT, ACTUARY, | ZEPHANIAH PRESTON, VICE PRESIDENT.

LUCIAN S. WILCOX, MEDICAL EXAMINER.

Organized in 1846. Charter Perpetual.

The Largest Mutual Life Insurance Company. Numbering Over 75,000 Members.

BEING A PURELY MUTUAL COMPANY ITS ASSETS BELONG EXCLUSIVELY TO ITS MEMBERS,

ASSETS, $21,000,000.—Acquired by prudent and economical management of twenty-two years, without the aid of a single dollar of original capital.

SURPLUS ASSETS, $6,361,967—All profits divided among the members. Each policy holder is a member. There are no stockholders.

ITS DIVIDENDS—Have averaged over 50 per cent. annually. Total amount of dividends paid the members since its organization, $4,397,142.

ITS SUCCESS UNPARALLELED—It has arrived at the extraordinary condition where the income from annual interest alone is more than sufficient to pay all the losses. Total amount of losses paid by the Company, $6,868,528.

ITS RESPONSIBILITY—For every $100 of liabilities it has $154 of assets.

LAST YEAR'S PROSPEROUS BUSINESS.

Amount insured fiscal year, 1867 .....$45,647,191 00 | Income received fiscal year, 1867.....$7,530,886 19

During its last fiscal year this Company paid to its living members, and to the families of deceased members, nearly $2,000,000, and at the same time added more than four millions to its accumulated capital.

The whole record of this Company has been one of prudent management and prosperous advancement. Among the older and leading Life Insurance Companies its average ratio of expenses to income has, through its entire history, been the lowest of any.

ITS LIBERALITY—It accommodates the insured by giving credit for part premium, and grants insurance to meet all the contingencies and wants to which Life Insurance is applicable.

It issues policies on a single life from $100 to $25,000.

MEDICAL REFEREES—J. WIDMER ROLPH, M.D.; H. H. WRIGHT, M.D.

OFFICE - - - - - - No. 90 King Street East, Toronto.

J. D. FEE, AGENT, TORONTO. DANIEL L. SILLS, GENERAL MANAGER FOR CANADA.
Toronto, December 24, 1868. 12-1y

LIFE ASSOCIATION OF SCOTLAND.

Invested Funds Upwards of £1,000,000 Sterling.

THIS Institution differs from other Life Offices, in that the BONUSES FROM PROFITS are applied on a special system for the Policy-holder's personal benefit and enjoyment during his own lifetime, with the option of large bonus additions to the sum assured. The Policy-holder thus obtains a large reduction of present outlay, or a provision for old age of a most important amount in one cash payment, or a life annuity, without any expense or outlay whatever beyond the ordinary Assurance Premium for the Sum Assured, which remains intact for Policy-holders' heirs, or other purposes.

CANADA—MONTREAL—PLACE D'ARMES.

Secretary-Treasurer—A. McK. COCHRANE, 388 St. Paul Street, Montreal.

THIS COMPANY, with machinery now in working order and in course of construction, will be able to manufacture this year FROM TEN TO TWELVE THOUSAND TO OF GOOD FUEL. Actual working shows—

I. That the fuel can be produced for $1.45 a ton, and with the improved machinery, at a much less cost.
II. That, for steam purposes, one ton of it is superior to one cord of wood, in the proportion of 31 to 27.
III. That, for domestic purposes, it is equal to wood or coal, and leaves very little ashes—about five per cent.

At the annual meeting of the Company in Montreal, it was decided to offer one thousand shares of Stock in Toronto. Mr. Isaac C. Gilmor has been appointed agent of Company in Toronto, and is authorized to receive subscriptions for the Stock.

Prospectus, Map of the Property, and further information may be obtained by addressing

Meetings.

NORTH BRITISH AND MERCANTILE INSURANCE COMPANY.

The fifty-ninth annual meeting of this Company was held at Edinburgh, on the 1st March, 1869. The Directors submitted the following Statement of the transactions of the Company during the year 1868 :

Fire Business.

Last year the Directors reported that the premiums received during the year 1867, after deducting re-insurances, Amounted to the sum of.....	£333,984	18	9
During the year 1868 the pre'ms received were....	£491,288	19	11
Deducting pre'ms paid to other Offices for re-insurances.....	75,744	14	9
The net Premiums received are....	415,544	5	2
Exhibiting an increase of..... ...	£81,559	6	5

The continued increase which has been thus manifested is satisfactory, as showing the progressive character of the business. The Directors have, as usual, set aside one-third of the fire premiums received during the past year, amounting to £138,514 15s 1d, to meet any losses which may arise on the unexpired fire policies of 1868. The losses by fire during the year 1868 have amounted to £222,792 14s.

Life Business.

There have been issued during the year 908 policies, assuring £738,582, and the new premiums amount to £23,574 0s 3d. The deaths which occurred during the year were 185 in number, under 206 policies ; and the sums which have become payable on account of these amount, with bonus additions, to the sum of £135,640 1s 6d. In the Annuity Department there have been issued 41 bonds, securing annuities to the amount of £1,569 4s 10d yearly, for which the Company have received the sum of £17,268 7s 9d. During the year 36 annuities have fallen in, relieving the company of an annual payment of £1,305 13s 4d.

The Directors recommend that a dividend of £12 per cent or 15s per share, with a bonus of 5s per share—making together 20s per share, or £16 per cent on the paid-up capital stock of the Company—be declared payable on the 15th March current, free of income tax. After paying this dividend and bonus, the result of the business for the year has been to add £44,452 14s 7d to the reserved fund.

There is submitted to the meeting the balance sheet of the Company's books, showing that the amount of the reserve fund, after paying the above dividend and bonus, will be £297,153 10s 10d, exclusive of the premium reserve of £138,514 15s 1d, set aside to meet the unexpired fire risks of 1868, amounting together to $435,668 5s 11d. At 31st December, 1866, these funds, after payment of the dividend then declared, amounted to £290,861 1s, so that during the last two years there has been an increase of £144,807 4s 11d. The assets of the Company now amount to £2,838,118 18s 11d, and the annual revenue from all sources is £801,801 12s 9d.

In consequence of the death of Mr. Laurence Davidson, the Law Agent of the Company in Scotland, that office became vacant, and has been filled up by the appointment of Mr. John Brown Innes. W.S., who had for many years been a Director of the Company. By the acceptance of this appointment Mr. Innes vacated his seat as a Director, and Mr. Alexander Howe, W.S., of the firm of Messrs. Lindsay, Howe & Co., W.S., was elected an interim Director in his place.

The Directors retiring this year from the Edinburgh Board are : James Campbell Tait, Esq., David Baird Wanchope, Esq., Frederick Pitman, Esq., who retire by rotation, and Alexander Howe, Esq., lately elected ; and from the London Board : Edward Cohen Esq., Pascoe du pre Grenfell, Esq., Adolphus Klockmann, Esq. They are all recommended for re-election. Mr. Alexander H. Campbell, of the London Board, having resigned in consequence of his being now resident in Bombay, the Directors recommend the election of Richard Brandt, Esq., merchant, in his room.

The following Extraordinary Directors retire by rotation : John Cookson, Esq., of Meldon Park ; the Right Hon. Viscount Melville ; and the Right Hon. Sir James Ferguson, Bart., of Kilkerran ;—and they are all recommended for re-election.

The Directors have to acknowledge the valuable services of the various local boards and agents of the Company. They tender them their best thanks, and earnestly request renewed and continued exertions in endeavoring still further to extend the Company's business in all departments.

CANADIAN LAND AND EMIGRATION COMPANY.

The fifteenth annual meeting of the shareholders of this company was held at the London Tavern, London, on the 3rd inst.

The Chairman, in moving the adoption of the report referred to the reconstruction of the Board, and the completion of such arrangements as would have the effect of giving more harmony to their deliberations. The directors, as you are aware, have shelved for some time the question of remuneration except such as should be voted to them at the annual meeting of the company. Now with regard to Canada. The Toronto board ceased to exist on the last day of last year, at the general wish of by far the greater part of the shareholders, and we believe that the time has come when its services are no longer required. We are at a great distance from the scene of the operations of the company, and it is important that we should have a gentleman there as manager in whom we could place thorough reliance, but upon whom there should be a check. Mr. Blomfield had been appointed—a man in whom, from all accounts, and from our experience of him for three years, we can place an implicit confidence; and we are agreed that within certainly defined limits he should have the fullest liberty to act for us to the best of his ability. Up to this time he was hampered by the Toronto board, to whom he acted as secretary, on the one hand, and on the other by fear of misrepresentations sent home. I believe and hope, now that he is solely appointed, he will be able to conduct the affairs of the company to a prosperous

conclusion. (Hear, hear.) I do not think I need now go into the questions to which we proposed to turn our attention. I may say that the arrangement of the board, as at present constituted, has occupied a great share of our time during the last few months, and has practically left little time to do anything else than agree as to the principles on which we are now to proceed, and it will now devolve upon us, if this meeting re-elects this board, to go on to carry them out to the best of our ability. There are several questions to which we intend to give our earnest attention—the sale of land, the making of roads, and the aiding of emigrants—and these are the ones to which we look for profitable return upon our investment. Gentlemen, these are all the remarks with which I need detain you. I move, then, the adoption of this report, having fully placed before you the state of the company, and I shall be glad to answer any questions which may be put either upon the report or the speech I have just made. I beg to move the adoption of the report.

The Rev. Mr. Tucker did not see any mention in the report as to an agency either at Cobourg or Port Hope. There was an agency at Toronto, but he thought they should have some agency at Port Hope or Cobourg, because their settlers were compelled to go there; but he only wished to call the directors' attention to the matter. It would give confidence to the shareholders if they saw that anything of that sort was entered into by the board. (Hear, hear). He thought it would be of advantage to the company to give away to *bona fide* settlers certain portions of land, say 100 acres, for they had now to compete with Government, who gave away gifts of land to the extent of 100 acres to any one who proved themselves to be a *bona fide* settler. And unless they did so, how could they expect men to take land from them? He would counsel the board to take the question into consideration, and to try it at least for two or three years. He wished to say nothing more, only to reserve to himself the right of proposing a director at the proper time.

Mr. Montgomerie (director) said—With regard to free grants of land by the Government, the company had made a remonstrance with them, not to ask them to give this up, but to say that it was scarcely fair to the company, considering the terms on which they had taken their lands. The Government recognized the justness of the complaint, and expressed themselves ready to discuss the question with the company. But it was already a fact that we had given several free grants of land upon the roads through their lands where it was necessary to keep them open for traffic. The land was given upon the condition that the settlers kept the roads free from underbrush. So that there was considerable difference between their free lands and those of the Government; for by the means of their free lands they kept open the roads upon their estates, which the Government did not undertake to do. And so great was this benefit, that all persons who had any money to buy land preferred to buy the land of the company rather than take the free lands of the Government. With regard to forfeitures, he thought that the directors could scarcely be blamed for pressing upon these persons to pay; they had abstained from doing so as long as they could with justice to the other shareholders. As to the proposition which had been made, that they should accept the money which had been paid on the part of the whole as sufficient to pay up some of the shares, they had consulted their solicitor, and were of opinion that it could not be done. Still, the notice of "intention of forfeiture" was very different from the forfeiture itself, and would only bring before the defaulting shareholders their responsibility, and might be accompanied by a statement that if such shareholders paid the calls due, with interest and legal expenses, that such shares would revert to the shareholders. This would meet entirely the difficulty suggested by Mr. Tucker.

Mr. Tucker—Do I understand that Government will compensate us?

Mr. Montgomerie—No.

Mr. Tucker—I think, considering our agreement, that the Government are bound to compensate us for our loss. I do not think we should do any harm by bringing these facts before Government.

A shareholder asked if the directors had any fresh news from Canada.

The Chairman—Yes, we have sold more acres of land than ever before, and in leasing we have done a great deal. We have leased 1,800 acres during the past year, while during the whole previous course of the company the leasings amount to only 7,500 acres; which I consider a very encouraging return. They are at ten cents per annum. The Chairman further remarked, in reference to the questions which had been asked, that the directors already had under consideration the question of establishing an agency at either Port Hope or Cobourg. With respect to the grants of land by the Government, he considered they had a moral claim upon the Government in consequence of the different position it placed the company's land in.

Mr. Gurney said that he intended, on the morrow, paying a visit to two members of the Canadian Government, who are at present staying in London, with respect to the question.

In answer to a shareholder, Mr. Gurney said they had not alluded in the report to the question of tramways, because they had not yet decided upon any steps in connection therewith. They should be happy if any shareholder who was acquainted with the question would come forward and give them any advice he could.

After some further discussion the meeting separated.

Insurance.

Fire Record.—Stratford, March 13.—A fire caught in the east end of Battershall's block; the buildings were saved with the aid of a small hand engine, but were damaged to the extent of about $500, which is said to be covered by insurance.

Stayner, March 18.—A telegram says the flour and grist mill at Warrington, one mile from Stayner, owned by Mr. Dewe, and occupied by J. Barclay, was totally destroyed by fire; cause not known. There was not much flour or grain in at the time. The contents were insured; but it is not known if there was any insurance on the building.

Barrie, March 12.—The dwelling house and store of Geo. Ford, Market square, was destroyed. There was a good supply of water, so that the fire was prevented from spreading.

St. Catherines, March.—The livery stable of Mr. Gordon, and contents, were consumed. Insurance, $2,000; loss stated at $3,000 to $4,000. The fire is thought to have been the work of an incendiary. The Stephenson House had a narrow escape.

Goderich, March 11.—Two stables belonging to William Campbell and Mr. Doyle, respectively, were entirely consumed. In Mr. Doyle's stable there was a span of horses, and it was with some difficulty that the animals were rescued. The stable was worth $300, $100 of which was covered by insurance. Mr. Campbell's was an old one. It is thought that the fire originated from ashes deposited in the latter.

Digby, N. S., Feb. 27.—A destructive fire occurred here, seriously injuring or totally destroying half a dozen houses. The fire appeared to have broken out in R. B. Stark's premises. The other sufferers are Messrs. E. P. Payson (two houses), Churchill & Taylor, Richard Thorn, and Ebenezer Beaman. We believe there was no insurance.

Bow Park, Ont., March 12.—The house on the farm of Hon. Geo. Brown, at this place, was burned with contents; insured for $2,000 in the Hartfo and $2,000 in the Etna.

Garden Island, March 12.—A house occupi by Mr. Johnson was gutted. The fire was p vented from spreading.

Belleville, March 20.—A small unoccupi brick cottage, owned by the estate of the la Edmund Murney, was destroyed.

St. John, March.—James Nelson's Intern tional Hotel, at Shutenacadie, was complete destroyed by fire on Sunday last, with all t barns and outhouses. Nothing but a few artic of furniture were saved. The property, valued $12,000, was only insured for $800, leaving M Nelson a heavy loser.

—"An Adjuster" sends us the following re able account of a number of recent fires:—

Clearville, County Kent, March 2.—Laycock Hotel was burnt down. The building was i sured in the Western of Canada for $500, a valued at $800; loss total. The contents w insured in the Provincial Insurance Company $900; loss about $400.

Goderich has become notorious within the l few days for fires. The first occurred on the 7 inst.; it was a private dwelling, owned by M Haftel, and occupied by Mr. Findley of Bank of Montreal. It was entirely consum cause said to be carelessness. It was valued $1,000, and insured in the Western for $700; l total.

The next fire was in three frame buildi owned by Dr. McDougall, and occupied milliner shop, shoe shop, and tin and stove sh The buildings were insured in the Western British-America for $1,000, and valued at $1,5 loss total. At the same time Mr. McMinch restaurant was totally consumed. The build and contents were said to be insured in the C mercial Union for $800, which is a total l The stock of boots and shoes was insured in Western for $400; loss $300. The millin stock was insured in the Liverpool and Lon and Globe for $400; loss $300. The tin st was insured in the Western for $1,500; $1,350.

On the 11th inst., 2 stables, owned by B. D and W. Campbell, worth $300. Insured for $ in Western.—Total loss. Cause of fire said to by piling up ashes against buildings.

On the 14th inst., 3 frame buildings, owned H. Horton, occupied by J. Johnson, as dry go and groceries; Martin, saddler and harness sh and Horton, as liquor and grocery. The bu ings were valued at $2,000, and insured in Phœ of London, for $1,500.—Total loss. Johnst stock was insured in Western for $2,000; dama to the extent of $950. Martin's stock was sured in Provincial for $500; damaged to the tent of $400. Horton's stock was insured in C mercial Union and Provincial for $3,000.—T loss. Besides the above, Gardiner & Co's. h ware stock was removed and sustained damag the extent of $300. Insured in Phœnix, C mercial Union and Provincial. Cassidy, b and shoes, were also removed, and damaged a $100; fully insured in Phœnix. The cause of last fire is looked upon with some suspicion; s suspect foul play; others again think it was ca by ashes having been put on the top of the ont stairs.

Appointment.—Mr. Dixon, for some y accountant to the Provincial Insurance Comp has been promoted to the post of Assistant M ager. Mr. Dixon has been a faithful officer, his promotion is a just recognition of the t Mr. Donaldson, late with W. R. Brown & has been appointed Accountant.

—Notice is given that application will be m to Parliament to incorporate "The Domi Life Insurance and Guarantee Association," "The Dominion Fire and Marine Insur Company."

CONNECTICUT MUTUAL.—The officers of the Connecticut Mutual Life Ins. Co., after a diligent and thorough examination of the different plans submitted for their new building to be erected in Hartford, have adopted that furnished by James G. Batterson, Esq. The building will be constructed of light Concord or Rhode Island granite, set off with rich columns, in each story, of polished Scotch granite, with a relief of Quincy granite, and will be altogether one of the most magnificent structures in New England. In front, on the Main street side, over the entrance, two colossal figures in marble, representing "Insurance" and "Plenty," will be placed, between which is the State coat of arms, and the insignia of the Company, wrought in polished granite. It is proper to have figures representing "Insurance" and "Plenty," since the following figures from the Company's official statement Jan. 1, 1869, represent "plenty" of "Insurance :"

Policies issued	11,960
Assets	$22,669,079.29
Income from premiums	7,161,304.11
Income from interest	1,584,905.48
Total income for the year	8,746,209.59
Losses paid	1,221,335.00
Dividends paid	928,284.00
Total losses paid to date	8,089,883.00
Total dividends yaid to date	5,197,258.00

—*The Chronicle.*

INSURANCE RATES ADVANCED.—For the purpose of placing the business of underwriting on fire risks in San Francisco on a paying basis, the Pacific, Union, Fireman's Fund, Occidental, Home, Mutual and People's of the local Companies; and of the Eastern Companies the Ætna, of Hartford; the Phœnix, of Hartford; Home, of New York; Manhattan, of New York; and the Phœnix, of Brooklyn; and of the European Companies the Liverpool and London and Globe, Hamburg-Bremen, North British, Imperial and Northern, have agreed on an advauced tariff of rates as follows:—On first and second class brick, 70 cents; on third class brick, $1 on the $100; on warehouses, 75 cents; on detached dwellings, 75 cents. This advance will be from 15 to 50 per cent., the smallest advance being on second class brick, from 60 to 70 cents, and the largest on detached dwellings, from 50 to 75 cents on the $100.—*San Francisco Real Estate Circular.*

HARBOURS OF REFUGE.—A meeting was lately held in Walsingham, to consider the expediency of laying before Parliament the advantages which the new cut at the S. W. entrance of Long Point Bay possesses, as a site for a Harbour of Refuge on Lake Erie. The following resolutions were adopted:—

That the increasing commerce of the lakes imperativcly demands the construction of a commodious Harbour of Refuge at some convenient point on the north shore of Lake Erie, for the safety of life and property—the want of such a harbour being the cause, annally, of a fearful sacrifice of both.

That while the Ports of Burwell, Stanley, and the Rondeau may have some claims for the establishment of a Harbour of Refuge, yet the want of room at those poiuts, and their being, as is particularly the case with Port Stanley and the Rondeau, out of the track of vessels navigating the lakes, is sufficient argument why those points should not be selected.

That in the opinion of this meeting, the new cut at Long Point affords the best site for a Harbour of Refuge, on the north shore of Lake Erie, for the following reasons:—1st. Its location is where the harbour is most needed, and is where most marine disasters occur—lying, as it does, in the bite of the lake. Long Point, running south east, and the main shore south-west, land-locked. Vessels on their voyage are frequently driven by the heavy south-west winds on the north shore, and find it impossible to work off, or in attempting to do so, become stranded on Long Point. 2nd. It is easily entered, nature having formed a channel running nearly south-west, through the Point of sufficient width for vessels to beat out, with from twelve to fifteen feet water, and a commodious basin inside Long Point Bay, free from any sea, and with good anchorage.

SAVING PROPERTY AT FIRES.—To a person who can "keep his head" during the progress of a fire, the different methods adopted by different people in the saving of property is something wonderful to behold. One man has a penchant for smashing windows and nothing else. With a piece of board he will demolish a common window in short order and his complacency when the fragments are saved is intense. His forte is shop windows—the more costly they are the better. It may be useless, worse than useless as it speedily admits fire, but crash he sends a battering ram through the costliest plates thus enabling those working inside to cut their hands to pieces. Another will pitch valuable furniture, such as sofas, centre-tables, glassware, mirrors, &c., from the upper window to the street. His work is to throw the stuff out, on the crowd devolves the task of saving the pieces.—Still another destroys all that he carries out. Salt bags are thrown into sugar barrels, pepper is hurled into tea caddies, grindstones are thrown upon piles of delf, butter is heaped on coal oil barrels, matches are stored in the most convenient puddle. We are speaking of facts, and we feel assured that a large per centage of what is saved at fires would be better completely destroyed. And all this for want of a little systematic common-sense.—*Goderich Signal.*

A NEW FIRE LADDER.

The Chicago *Chronicle* describes a new fire ladder thus:—The Truck consists of a frame in two parts, and runs upon four wheels. To the hinder part of the truck is attached the main ladder, upon which a slide ladder works, being raised by means of a winch at the foot. Each of these ladders is 30 feet in length, and a socket ladder at the top 16 feet in length. The pipe for the hose is affixed to the side of the sliding ladder, and is projected with it. From the top of each ladder extends a guy wire rope, the other end of which is fastened to a windlass on the frame. By means of this contrivance the ladder is given any degree of elevation required, and sustained in that position in the same manner as a builder's derrick. When the machine is housed or running, the ladders are very nearly horizontal, and arrangements are made for carrying other ladders under them. When about to be used, a pin is withdrawn which connects the two parts of the frame; and the ladder, with the hinder part turning on the axle of the hind wheels, comes to the ground at an angle of 45°, and thus may be wheeled into any position by two men, and raised to any height, having the ground for its base, instead of working from a platform as do others, which have also to choose an even spot for their operations. The ladder may be easily worked by two men, and elevated to its full height within three minutes. Among the advantages of this truck and ladder over the machines in ordinary use, is its compactness. It occupies less space in the engine-house, and in running its extreme length, horses included, is only 22 feet, which permits it to be turned with facility in any street in the city. It does not require a tiller to the hind wheels, and while it carries a ladder that can be elevated to a height of 66 feet, it is self-supporting. The pipes affixed to the sides of the slide-ladder have a screw top and bottom, to which the hose and branch pipe may be readily attached so that two streams of water can be thrown into any window from an elevation of from 25 to 70 feet, without carrying therewith a current of air to feed the fire, as is done by the present method. A stream of water thrown 20 or 30 feet from the ground, conveys with itself five or six times its own bulk of atmosphere, and, consequently, more damage is often done by water than by fire. This improvement also enables an engine to cast a stream of water to double the height it could otherwise attain, and the stream can be directed either from the bottom of the ladder or from the top. Weavell's machine, the one used in London, is especially adapted to effect the rescue of persons from burning premises, while the Brooklyn invention is not only adapted to this purpose, bnt is far more effective in extinguishing fires, as it enables the firemen to reach the seat of the fire, even at the loftiest elevations, and beat it out with the force of the water. In the hands of the Fire Department, it would prove an invaluable adjunct to their efficiency.

HARTFORD COMPANIES.

The *Courant* gives the following synopsis of the standing of the Hartford offices, Jan. 1, 1869, reinsurance at 50 per cent. of unexpired risks:—

Name of Company.	Capital.	Assets.	Liabilities including Re-Insurance	Net Value.	Net Value per Cent.
Phœnix...	$600,000	$1,467,835	$1,233,199	$234,636	139.10
Connecti't.	200,000	342,837	284,169	58,672	129.33
Hartford..	1,00,000	2,247,210	2,043,481	203,728	120.37
Ætna	3,000,000	5,150,932	4,715,841	435,091	114.50

—The Yarmouth (N. S.) *Herald* says: "We understand that the capitalists of this town are about to establish a Life Insurance Association."

Railway News.

GREAT WESTERN RAILWAY.—Traffic for week ending March 5, 1869.

Passengers	$22,744 47
Freight	39,715 80

Increase	$1,788 72

WOODEN RAILWAYS IN QUEBEC.—Mr. Dunkin has announced his policy with respect to wooden railways. The Gosford and Quebec, the Drummond and Arthabaska, Northern Railway of Montreal and Levis and Kenebec, are to have each 3 per cent. on the cost, provided it does not exceed $5,000 per mile; and the Sherbrooke and Lennoxville lines are to share the 3 per cent. between them if both are built, or if only one or an amalgamation is effected, the subsidy to go to the line built. The roads must have 15 miles in operation by the 1st September, 1872.

—At the annual meeting of the Sidney (N. B.) Boot and Shoe Company, held recently, a dividend of twelve per cent. per annum, or twenty per cent. on the twenty months the company has been in operation, was declared.

—The Toronto Assessors have demanded from the Building Societies, and other companies, lists of their stockholders. Legal advice is being taken on the subject.

—Notice is given that a charter will be sought for "The Imperial Bank of Canada" at the next session of Parliament.

THE BANK CHARTER QUESTION.

SCHEMES INCOMPATIBLE WITH CONVERTIBILITY.

III.

When a government takes security for the entire issue of bank notes, and insists that the security shall consist of its own evidences of debt, as under the National Bank system of the United States, the banks are in effect obliged to make a loan of a large part of their capital to the government. When this loan is made a condition of continuing the business of banking, it partakes of the nature of a forced loan. Capital is displaced—it changes hands—through the instrumentality of credit, and this capital is not kept by the government to be made available for emergencies in which the banks may be placed. It is dissipated; perhaps it is thrown into the open gulf of an already created debt. The United States National Bank system is non-specie paying, and while it lasts, redemption is admittedly impossible. The capital necessary for the redemption of the notes has been handed over to the government; and its restoration is the only road to a resumption of specie payments. This capital cannot at the same time be made to serve two different purposes. The banks in loaning it to the government—for that is the true way to describe the operation—put it out of their power to use it again, on a specie basis, for any other purpose whatever. The paper currency which the government issues to the banks is not based on the capital which the banks have transferred; but on the evidence of government debt for which it has been exchanged. Credit is substituted for capital, and that portion of the capital of the banks comprised in the advance to say nothing of the impossibility of maintaining specie payments, is made to share the fluctuations and partake of the hazards of the government credit.

The limits within which a bank can safely make loans to a government are very restricted. It may occasionally make loans at short dates, to anticipate a revenue which is sure to come in; provided the amount advanced does not exceed the revenue that will have accrued when the advance becomes repayable. And this is the full extent to which it can, as a rule, safely go. There are plenty of instances to show that when this limit is not observed, disaster will follow. In the latter part of the last century, the Bank of England made advances to the government, in amounts so large, and for periods so long, that a suspension of specie payments had to be resorted to. The Bank of France pursued a like course, under the old government, with a like result. The Bank of Stockholm, founded in 1657, flourished as long as it confined itself to what was then its legitimate business—borrowing at one rate and lending to the public at another—but when it changed its policy, after becoming a bank of circulation, and made loans to the government and the aristocracy, it paid the usual penalty of being obliged to suspend specie payments. Its ruin was so complete that it finally paid its creditors but twenty-six per cent. of their claims.

The loans exacted from banks by governments, under the guise of exercising a paternal care for the interests of note-holders, are in the worst of all forms. They are perpetual. There is no date fixed for their repayment; and it is not intended that they should ever be repaid so long as the banks remain solvent. And even when the banks fail, the capital which they had loaned to the government is not forthcoming. In its place have been substituted government evidences of debt. These "securities," as they are called, must be thrown on the market, and sold for what they will bring. Their market value will depend entirely upon the state of the government credit at the moment; and, in the case of this country, it might easily happen that they would not be saleable at all. A foreign war, with England for one of the combatants, or even a small Fenian raid, would give such a shock to Canadian credit that government securities would not be saleable at all.

A bank lending money to a government to cover deficiencies from ordinary expenditure, or to meet demands arising out of any unproductive expenditure, has nearly the same effect as would be produced by lending to a spendthrift. Capital is displaced through the agency of credit, and it is devoted to non-productive purposes. Somebody else is deprived of the opportunity of borrowing it; it does not go where it could be employed to the best advantage, and the nation is the poorer for the operation. When it is used to cover a deficiency between the ordinary revenue and the ordinary expenditure, there is something wrong. The equilibrium ought to have been maintained between the revenue and the expenditure, in one of two ways: either the expenditure ought to have been reduced or the revenue increased. But when a state of things does arise that renders a loan indispensable, it ought to be contracted in the open market, and not by borrowing from banks, whose means are destined for totally different purposes. In that case, it will often be an advantage to borrow abroad for then the capital required to conduct the commerce and business of the country is not trenched upon.

Greenbacks, if we may generalize a term now sufficiently understood, differ from assignats, in having for their basis evidences of government debt, which bears an annual interest; while the assignat was receivable in payment of purchases of public domain. The assignat, in general terms, entitled the holder to its value in public lands; the greenback is based on an obligation which confers on the holder the right to receive annually a portion of the public revenue, in the shape of interest. This obligation is a mortgage on the future and it is obvious that these claims to a share of the revenue may be increased to an amount beyond the capacity of the revenue to meet them. As a substitute for capital, in banking, it is a miserable expedient.

The structure of the national system is strictly logical: the only result which it could be productive of is paper money—paper not redeemable in specie—and accordingly it dispenses with specie, for that purpose. The banks being deprived of the greater part of their capital, and the government having put it to a purpose in no way connected with banking there remains nothing but to substitute paper

for specie; to drive specie from the channels of circulation, and leave only a trace of it in the vaults of the banks. It is idle to talk of convertibility, in connection with anything copied from the national bank system of the United States.

A closer inspection of the organization of the national banking associations will remove any possible doubt that could exist on this point. The last annual report of the comptroller of the currency, published on the 7th December, 1868, presents us with a general view of these banks, and their internal operation, to the 30th September previous. A national bank before going into operation, is required to deposit with the government, United States bonds to secure the ultimate redemption of its note circulation. For every one hundred dollars so deposited, it receives, in return, legal tender notes to the amount of ninety dollars. In other words, the bonds deposited exceed in amount ten per cent. of the notes it receives for circulation. On this basis, the banks commence. This proportion may, in time, become somewhat disturbed by a number of the banks going into liquidation, voluntary or forced. At the date to which Mr. Hulburd's report comes down, the aggregate paid up capital of the national banks was four hundred and twenty-six millions, one hundred and eighty-nine thousand, one hundred and eleven dollars ($426,189,111), and the bonds on deposit amounted to three hundred and forty-two millions, nineteen thousand, nine hundred and fifty dollars ($342,019,950). In other words, the national banks, all taken together, had loaned to the government, in this form, about four-fifths of all their capital. In return, they had got legal tender notes, to be used as currency, to the amount of three hundred and nine millions, nine hundred and fifteen thousand, one hundred and sixty-six dollars ($309,915,166). The actual circulation was, however, reduced, by the process of liquidation, some ten millions below the amount of notes originally issued; bringing it down to two hundred and ninety-nine millions, eight hundred and six thousand, five hundred and sixty-five dollars ($299,806,565.) It is evident that these proportions are altogether incompatible with a specie basis; and that would have been a sufficient reason, if there had been no other, why no attempt was made to introduce into the system the element of convertibility.

The question is not whether, speaking in round numbers, a reserve of gold equal to one-fifth of the capital of a bank is sufficient to maintain the convertibility of a note circulation equal to the remaining four-fifths; for if that proportion were sufficient, in any case, it could only be when the bank was at full liberty to make the best use of its resources; and that condition is wanting when it is obliged to commence by a loan of four-fifths of the whole amount of its capital to the government. It is quite useless, in this discussion, to point to instances where, the the conditions being wholly different, convertibility has been maintained on a minimum reserve of gold. It is true, the government gives the bank, in return for its loan, legal tender notes in the proportion of one hundred to one hundred and ten; and these notes having a forced circulation every where within the country, may serve its purposes so long as holders cannot demand gold for them; but if there should be one place—the counter of the bank—where specie could be demanded for them, the whole conditions would be so changed that the colossal machinery of the national banks would come to to a stand-still. It is the circumstance of the notes having a forced circulation that invests them with effective utility for the purposes of the banker. Deprive them of their character of a legal tender, at the counter of the bank, by making them exchangeable into gold, and it would be found that convertibility could be effected only through liquidation, in which case the loan to the government would be returned by a sale of the bonds deposited.

THE QUESTION OF SAFETY.

IV.

If the national banking system of the United States is not a safe one, it has confessedly nothing whatever to recommend it. It has led to speculation on a gigantic scale; speculation which partakes of all the worst features of gambling, and is a great source of danger, both morally and financially, and by it the public mind is being debauched. The comptroller shows the nature of the loans made and the speculations encouraged, in the city of New York, by the National Banks. The total amount of their loans is one hundred and sixty-three millions five hundred thousand dollars ($163,500,000). Of the whole amount, only nine-sixteenths, or rather more than half, goes to discount business paper; the rest is used for gambling speculations in gold and stocks. The comptroller is led, by official data, to the conclusion that "nearly one-half of the available resources of the National Banks, in the City of New York, are used in the operations of the stock and gold exchange; that they are loaned upon the security of stocks which are bought and sold largely on speculation, and which are manipulated by cliques and combinations, according as the bulls or bears are, for the moment, in the ascendancy."

The loans on call, of which the proceeds are used for speculation, appear to absorb the entire amount of the deposits. If there is not direct and positive proof of this, there is the remarkable coincidence that, on a given day —the day to which the official report of the comptroller comes down—the deposits held by the New York banks amounted to sixty-eight millions five hundred and twenty-nine thousand four hundred and seventeen dollars, (68,529,417) and the call loans to sixty-eight millions five hundred thousand dollars, ($68,-500,000). It is true these loans are made on the security of bonds of one kind or another; but that does not justify the reckless extent to which they are carried. Let the reader try to conceive what would happen in a panic that should greatly reduce the market value of all these securities, and render many of them altogether unsaleable. And even this is not all. Besides the direct loan of seventy millions for gold and stock gambling operations, the banks create a fictitious daily credit of from one hundred and ten to one hundred and twenty millions, by means of cheques certified to be good, when the drawers have no cash deposits to meet them. Some of the banks, we are told, deprecate the practice, and look with anxiety and alarm to the final issue; but they are all involved in the danger. The failure of one or more institutions, through reckless management, would endanger the whole. The comptroller traces the incentive to this mad speculation to that feature of the system which relieves the banks from the obligation of providing for the payment of their notes in specie, on demand: It is quite certain that the dangerous expansion of credit which fosters and sustains this speculation would be impossible if the paper issued by the banks were liable to be returned on them for specie. The necessity of being obliged to meet the demand for specie, in exchange for notes, is a great and salutary regulator of the currency. It has a constant tendency to keep discounts within the limits of actual transactions; for notes issued in excess of that limit, and for mere purposes of accommodation and speculation, return to the issuer almost immediately. They are not absorbed by the employment of labor, or in any other way carried into the circulation. It thus happens that specie-paying banks have very little power to inflate the currency beyond the legitimate demands of business. And, practically, when under no artifical restriction, and no monopoly is encouraged, they have almost as little power to contract it beyond that limit. If one bank fails to issue up to the maximum point at which a convertible paper currency can be maintained, another steps in and fills the vacancy. But where the check which convertibility imposes is wanting, excesses of all kinds receive the utmost license.

We must conclude, then, that the National

Bank system of the United States is not, take it all in all, a safe system. By its encouragement of speculation, it puts at hazard and induces individual operators to stake, at the gambling boards of the stock and gold exchange, enormous amounts, of much of which neither the banks nor the speculators are really in possession. The enormous amount represented by falsely certified cheques is wholly fictitious. But it creates a real liability, and places everybody's capital in jeopardy. When a national bank fails, the public seldom escape loss, even in the quietest times. Take an instance: "The affairs of the National Bank of Newton," the comptroller reports, "have been finally closed. The government claims were paid in full, and a dividend of forty per cent paid to the general creditors;" on which latter, it follows, a loss of sixty per cent must have fallen. If the circulation be secured—a great consideration in itself, we admit—there is created a more than corresponding insecurity in other directions; and the system, taken as a whole, could hardly be defended on the ground of safety, the only advantage that any one pretends to claim for it. On a view of the whole system, it is impossible not to condemn it.

For immunity from loss, by the failure of banks, the public are more dependent upon good management and integrity, in bank parlours, than the deposit of stocks with a third party. Capital may be lost, under almost any conditions. It may be lost by bankers who issue no notes, as in the case of Overend, Gurney & Co. It may be lost, where only specie is made use of, as was the case before banks of circulation came into existence. It may be lost by banks of issue, under legal obligations to redeem their notes in specie, on demand; and it may be lost where paper money—that is inconvertible paper—is alone used. The National Bank system affords the public no immunity from loss. All it aims at is to protect one class of creditors—the note-holders—a class primarily entitled to consideration, all will admit—but, by its encouragement of speculation, it opens the door to serious losses, in other directions. On the 1st Oct. last, fourteen National Banks had been placed in the hands of receivers. This step was not taken till they failed to redeem their note circulation themselves. Of these banks the affairs of only one had been wound-up, with a final loss of sixty per cent. of the claims of general creditors. Any firm or body corporate, that deals largely on credit, will make losses. This is foreseen, and taken into account, in calculations of profit. There is, perhaps, no reason why persons who loan capital should lose more than persons who loan—by selling on credit—goods. But this depends on good management. If a bank discounts doubtful paper, it is pretty certain to suffer loss. When the paper discounted is that of solvent persons, it is full security for the note circulation: it is security to the bank and ought to be to the public. That portion of a bank's note circulation, which is in excess of its specie reserve, has for its basis the commercial paper in exchange for which it is given, and the general credit and capital of the bank. With ordinary prudence, these should be sufficient; or, if any deposit of securities be insisted on, it should be such an amount as would not interfere with the free action of the bank, and prevent it making the best use of its means. When a bank outruns its credit and resources, it pays the penalty in temporary discredit, if it does not suffer more severely.

There are two ways in which the affairs of a bank may be brought into embarrasment: either the loss or locking up of a considerable part of its capital, and either cause may be carried so far as to be fatal. A bank note is an obligation which matures the moment it is issued; and this is the reason why banks cannot safely make loans at long dates. As the bank note is payable at the shortest of all dates, the commercial paper for which it is exchanged cannot safely be at long dates. Whenever this fact is lost sight of, and the means of a bank become locked up, its efficiency is destroyed. The great error of the old system of bank management in this country, now happily passed away, was to imitate the Scotch system of cash credits, or what amounted to the same thing, frequent renewals, on the strength of endorsations. But a practice which had answered well in Scotland proved disastrous here. The Bank of Upper Canada made loans to persons because they were known or supposed to possess some property. But the property often consisted of land on which no labor had been expended, and which was consequently cursed with the sterility of unproductiveness, for which there was no demand by cultivators, because land was largely in excess of capital and labor. In Scotland the name of a landed proprietor on the back of a bill for a thousand pounds implied no risk to the bank. In Canada it led to great losses—losses which however fell on the shareholders rather than on the public. This proves a fault of management, rather than a defect of system. The tendency to throw out everything but *bonâ fide* commercial paper, marks a great improvement in modern banking. All unsecured accounts—as notes without endorsers, and over-drafts—should be ruled out. They are inconsistent with good management, which after all is about the best security of the public against loss.

PROVINCIAL INSURANCE COMPANY.

A pretty fair notion of what a sound insurance company should be, may be formed by persons even slightly conversant with the principles on which indemnity from loss is based. The experience of modern times has not been lost on either government or people, and state control is the result. In England they have bogus companies, whose success in duping the public is only equalled by the ease with which it is accomplished. Our cousins across the lines have their "wild cats," which are made the object of relentless hunt by State Commissioners and others interested in paring their claws. Of course, there are people whose luck it is to fall into traps, and no amount of warning will save them from their destiny. They refuse to think, and wantonly ignore the plainest teachings of experience. For such there can be but little pity, but for that large constituency whose mistakes and misfortunes arise from ignorance, the State has bowels of compassion, and endeavours to shield them from the arts of the unscrupulous.

In some of the United States it has been deemed expedient to appoint Commissioners, whose duty it is to examine into the affairs of insurance companies, and, by the exercise of watchfulness, save the people from being deceived by a seeming security against loss, so that when a premium is paid for a policy of insurance, something is got for the money. In England, it is not improbable that officers will be appointed with similar duties and powers. Under our Insurance Act, companies doing insurance business are required to make a certain deposit with the Government, and to furnish certain annual statements of the nature and extent of their business, but we have no enactment which requires (as in Massachusetts) capital to be kept unimpaired, restrains the payment of dividends within judicious limits, and forfeits the license to do business on non-compliance with those and other equally wholesome provisions. Our public are left to judge for themselves of the standing of insurance companies, and it devolves upon us in the interest of shareholders, policy holders, and in justice to sound and carefully conducted companies to point out where there is a difference between fact and profession, in the case of companies asking for public patronage. The duty is often unpleasant; but it is one, nevertheless, which cannot and should not be shirked.

From time to time we have drawn attention to the state of the Provincial Insurance Company, and while avoiding anything like persecution, we have warned the directors of the company that they are not in a position to take the money of the people and guarantee them against loss. We do not say that

ese directors are not honorable men, for ey stand high in the community; but we y that they do themselves gross wrong in owing their names to be made use of to lster up a corporation whose sole strength their names; and they do the public ong in professing to insure against fire ile the financial state of the company is e of extreme embarrassment. This alle- tion is not made on hearsay. Last week was announced in this paper that Mr. ewry, the Assistant Manager, had been smissed, with a gift of three months' salary advance. This strange sort of dismissal turally prompted inquiry into the circum- nces attending it, and we find that Mr. ewry laid formal charges before the Board Directors respecting the Manager's incom- tency, and drew their attention to the cessity that existed for some provision ainst immediate suspension. It appears m Mr. Drewry's statement that the Pro- ncial Insurance Company has, at the pre- nt time, outstanding losses to the amount thirty-nine thousand three hundred and venty eight dollars ($39,378). It has a ortgage on its building for $8,000, and it liable for $15,000 on its issue of debentures securities to the Church Society. It will ve to make a second deposit of $17,000 th the Government in a few months. Its sets are all in pawn. The position is just is :

	Dr.	
sses and Claims.....	$39,378	
ortgage.....	8,000	
ebentures to Church Soc.	15,000	
ins. Fund, at 50 per cent	75,000	
ability to Stockholders...	79,000	
		$216,378
	Cr.	
sh.....	$1,000	
eposit with Government..	16,666	
		$17,666
Deficit.....		$198,712

that, if the company were now to go to liquidation, the sum of $119,712 would ve to be called up. There are some arine notes held by the Halifax agency, it as they may yet be swallowed up by ims, we do not feel justified in tak- g them into account. It may be said at there is the subscribed capital of 70,760 to fall back upon; but we know at the work of forfeiture has gone on r some time, and has diminished sadly e value of that intangible and mythical set. The condition of this company is tiable; it seems to be going from bad worse. As a home institution whose ospects at one time seemed good, even in barrassment, we were disposed to view charitably, but we should fail in our duty the public if we concealed the present ate of its affairs. The dismissal of Mr. Drewry is so suspicious that we can attribute it to no other cause than to a desire to cloak what his unselfish zeal has laid bare. Unless the Directors put the Company on a different footing, we shall be compelled to conclude that they are ready to sacrifice their well-won reputation as men and citizens for the sake of drawing their weekly stipends. They seem to imagine that there is some magic in the words "subscribed capital." If the words have substance in them, why in the name of all that is reasonable, do they not call the capital in and pay off the $40,000 of claims standing unpaid! Why heap up law costs in staving off claims by letting themselves be sued? why haunt banks for petty discounts? why mortgage their office? If the Insolvent Act applied to corporations they would have been wound up long ago.

It affords us little satisfaction to write these comments, but while home enterprises have their claims upon us, the interests of confiding policy-holders have to be regarded, and we are determined that the community shall not be deceived by a silence on our part, which would make us partners in the deception.

The North British and Mercantile.—The report of this Company shows a state of affairs that will prove very satisfactory to policy-holders as well as stockholders. The net premiums for the year were £415,544, being an increase of £81,559 over those of the year previous. A dividend of fifteen shillings and a bonus of five shillings per share, free of income tax, is certainly something to be proud of. At the end of the year, the Reserve Fund and Premium reserve amounted to £290,861. The annual revenue from all sources is about four millions of dollars, and the assets of the Company amount to about twelve millions.

We have no hesitation in expressing our opinion that this is one of the soundest of the British Companies doing business in this country.

Mineralogy of Nova Scotia. By Henry How, D.C.L., Professor of Chemistry and Natural History, King's College, Windsor Nova Scotia. Published by Charles Annand, Halifax, N. S., 1869. An official report.

The above work is the most useful compendium on the mineral resources of the sister Province, which has yet appeared, and one which does honor to its author's research and industry. It is to be hoped that the Dominion Government will authorize its translation into French and German, and that a few thousand copies will be sent to the forthcoming International Exhibition at Vienna, Austria, where its circulation would be of great benefit. All foreign consuls and emigration agents should also be provided with copies, if it is really wished to show that Nova Scotia, with its stern climate, is still a country where capital and labor may be advantageously employed. Further reference to the work will be made in a future number.

Communications.

COMMISSIONS TO BANK MANAGERS.

Editor of the Canadian Monetary Times.

Sir,—With your permission, I shall supplement with a few remarks the observations which I took occasion to make in your issue of the 18th ult., respecting what I conceived to be a just cause of grievance on the part of insurance companies, concerning an unwarrantable interference with their business by bank managers and others throughout the towns and cities of the Province.

I am led to believe that there is, on the part of at least one or two of our local companies, a disposition to resist in future the ten per cent exaction referred to. It is also intimated that the representatives of American companies doing business in the city are, by direction of their principals, urging its abolition.

I regret, however, that whilst there are many ready in denouncing the practice, there are those, who, inasmuch as they have hitherto been enabled by this means to control a larger amount of business than what would otherwise probably have fallen to their share, defend it; alleging that for years past the ten per cent. has been allowed, and that to discontinue it now would seriously interfere with their arrangements. Others plead the force of example. "If we refuse to allow it business will be driven from our doors," and they are therefore induced to yield compliance with a demand, which under other circumstances they would not for a moment listen to.

It is to be deplored that any considerations of a selfish nature should be permitted to interfere with our general interests as insurers; but unquestionably the course now being pursued by many, in their eagerness for business at any rates, will be found fraught with evil results to themselves and to others. If those who are now practising this system of extortion upon insurance companies find that they can do so with impunity, may we not suppose that they will ere long extend their operations to other portions of the community? The next step may be that the warehouse in which is stored the grain and other produce upon which the bank may have advances, will be named, and the vessels provided for its transportation, in order that they may levy a tax on the warehouseman and shipper.

In glancing over the pages of an American Insurance Journal recently, I was surprised at the statement, that of all the American Companies engaged in fire assurance in the British Provinces during the past twenty-five years it was believed that scarcely one could, to-day, show a balance on the credit side of their Canadian account. And what has been the experience of English Companies during the same period? I believe that facts will bear me out in the assertion, that during the past 15 or 18 years nearly a dozen, after encountering a succession of reverses felt that here was no profitable field for their operations and withdrew from the country.

If this, then, is the experience of the past are we justified, with the prevailing excessive competition, in allowing our reduced rates to be still further whittled down by a few individuals who are backed up in such unscrupulous acts by their principals, who with a pompous air, hesitate not to say that these are perquisites which all their subordinates are allowed.

In conclusion, I have only to say that I hope a determined stand will be made to resist and put down this practice, and that it will shortly be looked upon as abuse of the past.

Truly yours,

Insurer.

Toronto, March 24, 1869.

Mining.

NOVA SCOTIA GOLD FIELDS.

(From Our Own Correspondent.)

HALIFAX, N. S., March 16, 1869.

The "Chase" on her last trip came in at nine o'clock on Friday evening and left the following day at daybreak, and thus the present budget will be of more than ordinary length, but it is hoped, for all that, of not less interest. The heavy snow-falls within the past fortnight have interrupted mail communication, and the reports of the Deputy Commissioners, usually to hand by the 10th of the month, are still wanting. However, between the bullion receipts and the notes on the districts it will be seen that gold mining here has still some claims to be regarded as a progressive and profitable industry:

SHERBROOKE.—The *Palmerston*, *Dominion* and *Metropolitan* mines are flooded and works temporarily suspended. The *Wellington* speaks largely for itself through the bullion report, to which also the *Wentworth* and *Woodbine* contribute a moderate quota. At Cochrane's Hill, on the extreme limits of the district, about twelve miles west of Goldenville, a new mine is being opened. The shaft is already forty feet down, and exposes a gold bearing lode averaging eighteen inches in width. The proprietors intend erecting a mill, which will give them the privilege of ten areas free of rent and royalty.

WINE HARBOR.—Three serious accidents have occurred since the beginning of the year; one poor fellow getting injured through the premature explosion of a blast, a second through coming in contact with some machinery, and a third, recently, the engineer of the steam drill, through falling down the air shaft, forty-five feet deep. Each one is maimed for life, and the wonder is that no more accidents happen where so little care and forethought is shown. But little progress is reported from this district. A property forming the southeast of the district as originally laid off, and embracing the lodes worked by the Provincial and Eldorado companies is being stocked in New Brunswick for $500,000. The property belongs to Messrs. R. G. Leckie and J. DeWolfe Spurr, and is now styled the *Napier*, significant of the unapproachable as well as irreproachable character which its enterprising proprietors intend to acquire for it. The capital stock is divided into 50,000 shares of $10 each, and is to be paid for by 25,000 shares at $2 per share; 12,500 shares at $2 a share are to be disposed of for working capital, and the remaining 12,500 shares will be reserved as treasury stock, to be disposed of as circumstances may require. Work has already commenced, and the company has temporarily rented the *Eureka* mill.

TANGIER.—The Strawberry Hill Company have made no returns since last October, but have been repairing their mill and lying fallow. They began work a few weeks ago, and the manager is daily expected in town with a bar of about 300 ounces, as evidence of his reactivity and the company's healthful awakening.

UNIACKE:—Productive workings are confined to the mines of the Montreal Association, the Mount Uniacke Company, and Mr. La Mothe. From the latter, Mr. Touquoy reports that he has about ten tons ready for reduction, that the lode he is drifting on increases from four to twelve inches, the greatest width being towards the eastern boundary. He estimates an average of one ounce per ton from the quantity raised, as the quality of the ore improves in depth. The cost of raising will be about $8 per ton.

WAVERLEY.—Work confined to tribute. It is expected that the circulation of Professor Hind's report will have the effect of reviving interest in this district, and its issue from press is impatiently looked for.

MUSQUODOBOIT (JENNINGS').—About 800 areas are now held under license and 100 under lease. Mr. Burkner, when in town last week, brought with him a specimen of quartz from his southern lode. The rock weighed sixteen ounces, and was estimated by Mr. R. G. Fraser to contain one and a half ounces of gold. This lode has proved to be gold-bearing for a distance of 1,300 feet, and to a depth of 45 feet. One drawback of the central and southern part of this district is the depth of soil and quantity of water. In one place the bed rock had not been struck at 78 feet depth, and the other shafts were making water so fast that a steam pump will be required to keep them dry. The anticlinal passes immediately north of the Burnett property, and the recurrence of the rich lodes now opened to the south is anticipated to be met with in the first seven ranges of areas north of the "free" claim. In fact, the prospecting party working for Mr. Longmaid report the discovery of two gold-bearing lodes already on these ranges. The depth of soil there is only from four to six feet, and further east, in block one, the rock is bare, but the quartz veins have not been tested in that direction. As the first started mill of eight stamps confers, in a new district, the privilege of ten areas free of rent and royalty, there was much competition between Messrs. Barnett & Co. and Mr. Burkner for the rapid completion of their mills, and the former company, it is alleged, induced the carrier of Mr. Burkner to delay the delivery of some machinery for two days. Still Mr. Burkner set his mill to work at six o'clock on the morning of the 8th inst., but unfortunately after a short time the boiler burst. The Burnetts started theirs later in the day, and as it has been continuously running, they now claim the benefit of the ten free areas. The dispute will probably be settled by awarding five areas to each claimant, and the Chief Commissioner of Mines and the Provincial Deputy left yesterday for Musquodoboit to take evidence on the spot, and thus be in a position to make a fair award. The Surveyor, Mr. Murphy, returned last week.

FIFTEEN-MILE STREAM.—Some activity is reported here and very excellent prospects. A new company, the Havilah, has gone into operation, and being controlled by practical miners, there is reason to suppose that something more tangible than mere "prospects" has induced their location in this district.

GOLD RIVER.—This is the next district on the list for an official survey, systematic explorations for gold in quartz and alluvium being intended in the spring. Dr. How's report on the "Mineralogy of Nova Scotia," a most interesting work, just published by order of the local Government, speaks of this district as containing numerous quartz veins, and of an assay made at New York from one of the lodes being worked in 1866 by a company which has since failed, yielding 3 ozs. 17 dwts. gold, and 12 ozs. silver, to the ton of ore. More recent assays by Mr. J. Longmaid gave 4 ozs. 0 dwt. 19 grs. and 2 ozs. 11 dwts. 11 grs., while actual millings of several hundred weight of surface stuff from other lodes yielded 6 dwts. 1 gr. and 4 dwts. 18 grs per ton. These results justify some confidence in the district, and the expenditure both of research and capital to more thoroughly test its capabilities.

THE OVENS.—The properties formerly owned by Alderman McCulloch and Mr. D. S. Macdonald have been purchased by Canadian capitalists and will be explored this summer. The expensive furnace erected by another company for reducing ore on a large scale with the aid of Stevens' flux got out of order, and no results were made known.

DISCOVERIES.—Experimental crushings of quartz from Cranberry Head and the Cream Pot, in Yarmouth county, have been of sufficiently satisfactory nature to induce some of the monied men of Yarmouth to form a mining company, which will be in operation early in the spring. These localities were specially referred to by Mr. Henry Poole, the Special Geological Commissioner for the Nova Scotia Government, who report upon the western districts in 1862.

New discoveries are also reported at Scra Lake and Preston.

BULLION RECEIPTS.

The following quantities of bar gold have b received in Halifax since last report:—

Between 15th and 28th February.

TORONTO STOCK MARKET.

(Reported by Pellatt & Osler, Brokers.)

The commercial failures of late have tende depress all bank stocks, and large amounts h accordingly been thrown on the market. market, however, closed rather firmer.

Bank Stock.—Montreal continues in fair mand at 141½, closing firm at the latter r Sales of British were made at 105; buyers 104¼. Ontario sold at 100, closing with bu at 99½, and no sellers under par. Transacti in Toronto occurred at 121 and 121½, with li offering. No demand for Royal Canadian; cl heavy at 80. Small sales of Commerce occur at 102½, 103 and 103½; it is still procurable at latter rate. There are buyers of Gore at 41; li offering. Merchants' has declined during week to 107¾, closing rather heavy at this Quebec is enquired for at par; little doing. advanced to 104, but fell to 102½ to 103, closed heavy. Sales of Du Peuple were made 108, and there is still a fair demand at 1 Nationale is asked for at 107½. Jacques Ca continues in good demand at 109¼. Buyers 96 for Mechanics'; no sellers under 98. O banks nominal.

Debentures.—Canada sterling five per cents. offering at 94½; no six per cents. or Domin stock in market. There is a good demand Toronto—none offering. Large sales of Co were made during the week at par.

Sundries.—City Gas sold at 108; little offering. anada Permanent Building Society is enquired r at 126; and sales were made at 125½ to 126. Western Canada B.S. sold at 121; little in market. reehold is inquired for at 110½; sales occurred at 10 to 110½. British-America Assurance is in ood demand at 55½ to 56. Sales of Canada anded Credit were made at 75, 76 and 77; it is demand at the latter rate. Mortgages are eely offering to pay 8 per cent., and in some ises as high as 9 per cent. has been paid. Money rather tight, and first-class paper is offering at igh rates.

REVENUE AND EXPENDITURE OF CANADA.

The following is a statement of the Revenue d Expenditure of the Dominion of Canada for e month, and eight months ending the 28th of ebruary, 1869:—

evenue—Customs	$409,791
Excise	206,282
Post Office	47,360
Bill Stamp Duty	11,977
Public Works, including Railways	44,836
Miscellaneous	536,276
evenue for February, 1869	$1,256,522
" " July, 1868	1,375,720
" " August	1,377,933
" " September	1,846,361
" " October	1,545,857
" " November	1,214,155
" " December	1,002,610
" " January, 1869	792,764
Total for 8 months	$10,411,922
xpenditure for July 1868	$1,801,622
" " August	964,293
" " September	2,294,409
" " October	1,560,063
" " November	877,448

" " February	638,728
Total	$11,109,623

BANK OF ENGLAND.

	March 6, 1869.	March 5, 1868.
ank rate of discount	3 per cent.	2 per cent.
ank reserve	£9,454,907	£12,542,812
ank stock of bullion	18,021,457	21,136,192
rice of Consols	92⅞	93

The money market continues tolerably active, e demand being increased this week by the lls falling due on Thursday; there is, however, quotable change in the rates of discount. The west charge is 3 per cent. at the bank, as well as the open market, but from the state of the nk's accounts (as shown in this weeks return) may expect that an upward movement cannot ng be delayed.

Dorwin & Co.'s Failure.—The Montreal *erald* says of this affair: Among the rumors as one that Mr. Dorwin had taken with him the m of $80,000. This we hear on reliable aority is not the case. The most which the nior partner may have carried off does not exd $10,000, and it is probable the amount is der $7,000. The exact position of the estate s not yet been exactly ascertained. The liaities are about $250,000, $150,000 of which are direct, being notes discounted and in the hands our banks here, chiefly the Molson's and Peo-'s, some of the others also holding a portion ereof. Very little, if any, loss is expected to sustained by the banks who hold their paper, e security in most cases being satisfactory to e banks interested. Of the $100,000 direct bilities, about the half is due in Boston and New York, $10,000 to the Union Bank for gold drafts sold that institution, which of course will not be honored on presentation, but no doubt would have been secured had the mails been running regularly. The two ladies who are reported to have had on deposit $4,000 each, had only $2,000 each, and that of $4,000 by another of our citizens is exaggerated, being less than $400. Several leading houses in the city who were in the habit of leaving silver in special deposit, will suffer in sums ranging from $1,500 to $2,500. The other liabilities are scattered and vary in amount. The available assets are very small, being chiefly in promissory notes to the extent of about $5,000, and cash $2,000, all the real estate consisting of vacant lots in Griffintown, and the residence in Drummond street, having been secured to Mrs. Dorwin. These properties are, we understand, estimated as being worth about $30,000, but the residence is mortgaged to the extent of $3,000. It is rumored that Mrs. Dorwin has consented to place these properties at the disposal of the creditors, but of this we are not certain. Many reasons have been assigned for the failure; but the more immediate cause of the stoppage was the withdrawal by several persons of large amounts on deposit.

Dominion Notes.—The following is a statement of the Dominion Notes in circulation 3rd of March, 1869, and of the specie held against them under the Dominion Note Act:

Dominion Notes in circulation—		
Payable at Montreal	$2,759,807	
Payable at Toronto*	938,193	
Payable at Halifax†	336,000	
		$4,034,000
Specie held—		
At Montreal	450,000	
At Toronto	400,000	
At Halifax	67,200	
		$917,200
Debentures held by Receiver General under the Dominion Note Act		$3,000,000

* Including $, marked St. John.

† The Nova Scotia dollar not being equal in value to that of the other Provinces, the notes issued at Halifax are worth their face value in Nova Scotia only. They are stamped "Payable at Halifax," and are numbered in black ink. None but $5 notes are yet in circulation.

Law Report.

Warehouse Receipts.—M. & Co, being indebted to the plaintiffs on certain overdue notes, it was agreed that plaintiffs should discount a further note for them, with the proceeds of which, it was understood, the overdue paper should be retired; that M. & Co. should hand over to plaintiffs certain warehouse receipts for wool, stored in their warehouse, as collateral security. This note was accordingly, on the 23rd January, 1868, discounted by plaintiffs, and the old notes duly retired, an agreement being signed by M. & Co. at the time of the discount, reciting that they had indorsed over the receipts as collateral security for the note, &c., &c. The receipts, nearly all in the same form, were as follows: "*Warehouse Receipt*—Received in store in our warehouse, at . . . from sundry parties, 17,900 pounds batting, to be delivered pursuant to an order of the Bank of British North America, to be indorsed hereon. The said batting is separate from, &c., &c." Neither M. & Co. nor the Bank indorsed the receipts. *Held*, that they were not warehouse receipts under the statutes, and that the Bank could not, therefore, claim the property covered by them. Per Hagarty, C.J., that the transaction of the 23rd January was not in substance, though in form, a present advance to M. & Co., but merely a mode adopted of paying off an already existing debt.—*Bank of British North America* v. *Clarkson, Assignee of Miller.*

Commercial.

Toronto Market.

Trade is in a rather unsatisfactory state. A feeling of distrust and uncertainty seems quite general, and business-men are mostly moving with great caution. Within the last day or two signs of an improvement are not wanting, but whether a permanent change for the better is likely to set in, depends on so many contingencies that it cannot be relied on. The dullness of the winter trade—the fall in wheat and flour—the import trade overdone—are all circumstances which are pointed to as possible causes of still further trouble in the commercial world. The position is a delicate one. If it be tided over without further casualties among traders, their escape will have to depend upon the exercise of caution and prudence and that degree of leniency on the part of creditors, which is always requisite in cases of the kind. The country, as a whole, is in a sound state, and any mishaps that may result must spring from an undue expansion of credit in the trade in imported goods, or the disappointment of the anticipations of over-hopeful speculators. A check, such as is now being imposed, was required, and we shall welcome it if it do not cost us too dearly.

Dry Goods.—Goods have arrived freely, and are now pretty well opened out, but buyers are not expected before the 1st April.

Groceries.—Prices have ruled steady since our last, and the trade has been without any marked activity. *Teas*—Have arrived freely, and a good many have been moved. In our English market reports, we notice a good enquiry for Congou, for Canada, is reported, in anticipation of the spring trade, but transactions have been on a limited scale. *Sugars*—Are quiet at quotations, which have not changed from last week. *Pepper*—Has advanced rapidly; a rise of 100 per cent. is reported in prices in the English market.

Hardware.—Prices are steady, except those of Tin, which are rapidly advancing, owing, it is said, to diminished production.

Leather.—A fair business has been done with the city and country trade at our quotations, which are purely wholesale.

Hides.—Have been pretty lively; the market is rather unsettled, and cured are higher. Sheepskins have also advanced.

Petroleum.—The combination is still master of the situation, but how long it will hold together is now a matter of some uncertainty. Meantime, prices are steady, as quoted.

Grain.—*Wheat*—Receipts 7,140 bushs., and 4,900 bushs. last week. There is a fair enquiry for spring at current prices, and sales reported are: 20,000 bushs. at Meaford at 87½c., f.o.b.; 10,000 bushs. at Toronto at 92½c., f.o.b.; 10,000 bushs. at Kingston at 97½c., f.o.b. at the opening of navigation. At the close there were buyers of car loads at 90c., holders asking 95c.; some sales of cars at 90c. There are no buyers of round lots of fall, and little is offered; our quotations are purely nominal. No midge proof offering. *Barley*—Receipts 900 bushs., and 900 bushs. last week. Barley is held at $1.20 to $1.27, with buyers a. $1.10 to $1.20; no sales. *Peas*—Receipts light; market dull at 65 to 72c.; no sales reported. *Oats*—Receipts 1,200 bushs., and 1,200 bushs. last week. The market is steady and firm at 49 to 50c. on the track; very little offering; sales of cars are reported at these prices. *Rye*—Nominal at 65 to 70c. *Seeds*—There is a moderate demand for clover at $6 to $6.50. Timothy is in good demand at $2.25 to $2.85 for fair to choice, with some sales at our outside quotations.

Flour.—Receipts 1,300 bbls., and 1,475 bbls. last week; No. 1 superfine has met with a fair demand, but is sparingly offered. Sales reported are: 800 bbls. at $4, in store; 1,200 bbls. at $4, f.o.b.; 100 bbls. at $4, in store; and 500 bbls. at $4, free of charges. In other grades there is nothing doing.

Provisions.—*Butter*—No. 1 dairy is scarce

and in good demand at from 24 to 26c.; store-packed is almost unsaleable, holders would gladly accept 20c. *Pork*—Mess is very scarce, and held in few hands at $26; no sales reported. *Dressed Hogs*—A small lot sold at $9.20, which is an outside price; market bare. *Bacon*—Is in light supply and held at 12c.; additional receipts will be to hand in a few days. *Eggs*—Are readily saleable to-day at 24c.; but as soon as the Easter demand is over they may be expected to drop to 10c.

FREIGHTS.—Rates by Grand Trunk Railway:—Flour to all stations from Belleville to Lynn, inclusive, 35c., grain per 100 lbs. 18c.; flour to Brockville and Cornwall, inclusive, 43c. grain 22c. flour to Montreal 50c. grain 25c.; flour to all stations between Island Pond and Portland, inclusive, 85c. grain 43c.; flour to Boston 90c., gold, grain 45c.; flour to Halifax 98c., grain —c; flour to St. John 98c. Boxed Meats to Liverpool per gross ton 82s. 6d.; lard or butter in tinnets 87s. 6d.; Pork 11s. per tierce; flour 5s. 6d. per barrel; grain 12s. per 480 pounds. Rates by Great Western Railway—Flour, Toronto to Suspension Bridge 25c. gold; thence to New York, 92c. U. S. currency per bbl.; to Boston $1.02. Grain to Bridge 13c., gold; thence to New York 46c, U. S. currency; to Boston 51c. Grain, Toronto to Detroit, 18c. ber 100 lbs; flour 35c per bbl.

Imports, Production, and Consumption of Sugar and Molasses in 1868.

	1867	1868
	Tons.	Tons.
FRANCE—Imports	178,712	225,287
" Production	236,901	237,682
" Total	415,623	462,969
ZOLLVEREIN—Imports	4,950	8,977
" Production	199,656	180,616
" Total	204,606	189,593
Other countries	1,057,263	1,253,410
Total imports of Cane Sugar in Europe and the United States, and Production of Beetroot in France and Zollvercin	1,677,492	1,905,972
Add Stock at end of 1867	.. ..	298,607
		2,204,579
Deduct Stock at end of 1868	413,488	.. ..
And imports at Italian Ports, mostly transhipments	58,631	472,119
Total deliveries of Sugar in the principal markets of Europe and America during 1868	.. ..	1,732,460

To this total of 1,732,460 tons has to be added the consumption of Beet Sugar in Austria, Russia, Holland, Sweden and Norway, Belgium, &c., or say (less exports to France and England) 200,000 tons. We have also to add the consumption of the Pacific States of the American Union 18,500 tons; the deliveries, including the total exports in the minor Atlantic ports of the United States, 138,000 tons; the consumption of Maple Sugar in Canada and the United States, 30,000 tons; the deliveries of Molasses in the United States, 80,000 tons. Adding the consumption of Molasses in England, and the difference between the official exports and consumption of Raw Sugar in the United Kingdom, and in the return of imports 26,000 tons, also, adding 70,000 tons for the consumption of Spain, Portugal, Gibraltar, Malta, and the consumption of English treacle in the German Union with other minor matters—we arrive at a total consumption of Sugar in Europe and North America, during 1868, of 2,294,960 tons. Adding 70,000 tons for the non-producing British Colonies, and temperate South America, we have a total consumption for Europe, the United States, the non-producing British Colonies, and temperate South America, of 2,394,960 tons of Sugar. From this amount we must deduct the exports of Beet Sugar from France and Germany to other places given in the table, or say 40,000 tons, which reduces the consumption of Europe and North America during 1868 to 2,354,000 tons. We made a similar estimate in a different form, where we estimated the Sugar deliveries of 1867 at 2,060,000 tons. Adding 100,000 tons to the American consumption for Molasses and the Pacific States, which we did not then include, we arrive at a total of 2,160,000 tons, or an apparent increase in the total deliveries of 194,960 tons. This, however, is not really an increase, but is due simply to taking the actual deliveries from the great Sugar markets, both for consumption and for export, and to not estimating the consumption of each country separately—in fact, in taking more accurate returns than estimates, which latter were before the only means possible for getting at the statistics. The total deliveries appear, as far as we can gather, to have really increased about 100,000 tons, or, say four per cent. over 1867.

As a complete check upon the above, we have compiled the following table, showing as far as possible the actual deliveries of Sugar in the consuming countries — excluding Italy, Turkey, Greece, Mediterranean ports, and Switzerland, where the sugar is nearly all transhipped, and deducting 28,000 tons from France, and 12,000 tons for North Germany, for exports of Raw to other countries in the table. The difference of 4,000 tons in such a large total shows the close approximation of our figures to the actual state of the case. It must be recollected that we take Molasses at its full weight, and include it in all cases, so far as we can ascertain:

Deliveries of Sugar for Consumption and Export during 1868.

	Tons.	
Great Britain	635,000	
United States	598,000	
North Germany	146,000	
France	406,000	
Holland	148,000	
		1,933,000
Russia and Poland	100,000	
Austria	95,000	
Spain and Portugal	67,000	
Belgium	40,000	
British Colonies	65,000	
Norway, Sweden, and Denmark	20,000	
		387,000
		2,320,000
River Plate, &c		30,000
Total		2,350,000

It is greatly to be regretted that no statistics are available to show the consumption in the great producing districts of India, China, Japan, the Eastern Archipelago, the Sandwich and other Pacific islands, Mauritius, Reunion, Brazil, Mexico, and the British and Foreign West Indies. But in the meantime, the above statistics are of very great interest, and afford a firm basis for judging of the course of markets. Our returns show the approximate Sugar consumption of 313,000,000 souls, and the average per head is thus 16.8 lbs. per annum. The net official British consumption during 1868 was 611,151 tons, or taking our population at 31,000,000, 44·14 per head. At this rate—a very moderate one—the consumption of 313,000,000 souls would be 6,150,000 tons, or at the Victorian rate of 92 lbs. per head, 12,800,000 tons. English Sugar duties are excessive and oppressive—how much more so they are in other countries we have shown previously. The abolition of the Sugar duties over the civilized world would develope a trade only second to that in Corn, it would revolutionize agriculture in Europe, restore tropical colonies to more than their former prosperity; give employment to thousands of ships and millions of laborers, and cause a development in commerce only second to the withdrawal of protection on Corn.—*London Produce Markets Review.*

ASSETS, $21,000,000.—Acquired by prudent and economical management of twenty-two years, without the aid of a single dollar of original capital.

SURPLUS ASSETS, $6,361,967—All profits divided among the members. Each policy holder is a member. There are no stockholders.

ITS DIVIDENDS—Have averaged over 50 per cent. annually. Total amount of dividends paid the members since its organization, $4,397,142.

ITS SUCCESS UNPARALLELED—It has arrived at the extraordinary condition where the income from annual interest alone is more than sufficient to pay all the losses. Total amount of losses paid by the Company, $6,868,528.

ITS RESPONSIBILITY—For every $100 of liabilities it has $154 of assets.

LAST YEAR'S PROSPEROUS BUSINESS.

Amount insured fiscal year, 1867 .....$45,647,191 00 | Income received fiscal year, 1867.....$7,530,886 19

During its last fiscal year this Company paid to its living members, and to the families of deceased members, nearly $2,000,000, and at the same time added more than four millions to its accumulated capital.

The whole record of this Company has been one of prudent management and prosperous advancement. Among the older and leading Life Insurance Companies its average ratio of expenses to income has, through its entire history, been the lowest of any.

ITS LIBERALITY—It accommodates the insured by giving credit for part premium, and grants insurance to meet all the contingencies and wants to which Life Insurance is applicable.

It issues policies on a single life from $100 to $25,000.

MEDICAL REFEREES—J. WIDMER ROLPH, M.D.; H. H. WRIGHT, M.D.

Toronto, December 24, 1868. 12-1y

LIFE ASSOCIATION OF SCOTLAND.

Invested Funds Upwards of £1,000,000 Sterling.

S Institution differs from other Life Offices, in that the BONUSES FROM PROFITS re applied on a special system for the Policy-holder's personal benefit and enjoy- during his own lifetime, with the option of large bonus additions to the sum ed. The Policy-holder thus obtains a large reduction of present outlay, or a sion for old age of a most important amount in one cash payment, or a life nity, without any expense or outlay whatever beyond the ordinary Assurance ium for the Sum Assured, which remains intact for Policy-holders' heirs, or purposes.

Secretary-Treasurer—A. McK. COCHRANE, 388 St. Paul Street, Montreal.

THIS COMPANY, with machinery now in working order and in course of construction, will be able to manufacture this year FROM TEN TO TWELVE THOUSAND OF GOOD FUEL. Actual working shows—

I. That the fuel can be produced for $1.45 a ton, and with the improved machinery, at a much less cost.
II. That, for steam purposes, one ton of it is superior to one cord of wood, in the proportion of 31 to 27.
III. That, for domestic purposes, it is equal to wood or coal, and leaves very little ashes—about five per cent.

At the annual meeting of the Company in Montreal, it was decided to offer one thousand shares of Stock in Toronto. Mr. Isaac C. Gilmor has been appointed agent Company in Toronto, and is authorized to receive subscriptions for the Stock.

Prospectus, Map of the Property, and further information may be obtained by addressing

with which is united the

BRITANNIA LIFE ASSURANCE COMPANY.

Capital and Invested Funds.....£750,000 *Sterling.*

ANNUAL INCOME, £220,000 STG. :

Yearly increasing at the rate of £25,000 Sterling.

THE important and peculiar feature originally introduced by this Company, in applying the periodical bonuses, so as to make Policies payable during life, without any higher rate of premiums being charged, has caused the success of the BRITON MEDICAL AND GENERAL to be almost unparalleled in the history of Life Assurance. *Life Policies on the Profit Scale become payable during the lifetime of the Assured, thus rendering a Policy of Assurance a means of subsistence in old age, as well as a protection for a family*, and a more valuable security to creditors in the event of early death; and effectually meeting the often urged objection, that persons do not themselves reap the benefit of their own prudence and forethought.

No extra charge made to members of Volunteer Corps for services within the British Provinces.

TORONTO AGENCY, 5 KING ST. WEST.

CANADIAN AFFAIRS IN LONDON.

(From a Correspondent.)

LONDON, March 11, 1869.

Perhaps some of your readers may not have heard of a new society recently founded here, and entitled the Colonial Society. Its design is to afford facilities for the discussion of all topics of a non-political character, which relate either to the internal concerns of the British dependencies or to their position as sections of the Empire. It is obvious that such an institution will prove useful in diffusing needful information on Colonial subjects, and thereby exercising a beneficial influence over Imperial policy and legislation. Lord Bury is the President. Among the Vice-Presidents are the Duke of Buckingham, the Earl of Carnarvon, Lord Lytton, and the Right Hon. Edward Cardwell. The Council is composed of men whose practical experience of colonial affairs is very great. Suffice it, however, to mention but one name, that of the Right Hon. Sir John Young, Bart., G.C.B. A few months only have elapsed since the formation of the society, and it is already in a flourishing state. The best proof of its importance was furnished last night when the leading English and Colonial statesmen assembled together at the society's inaugural dinner. The report of speeches you will find in the newspapers. There are some things, however, not fully reported which I may here repeat. The Hon. Reverdy Johnson made a speech, which contained some expressions that jarred on the ears of the company. After stating that the United States had not renounced their idea of acquiring fresh territory, he observed that the Stars and Stripes might wave hereafter over some of her Majesty's Colonies. This of course was supposed to intimate that the wild dreams of certain American writers might be realized, and the Dominion of Canada be absorbed into the Great Republic. This part of his speech was not permitted, however, to pass unrebuked. Earl Granville ridiculed the notion in a pointed yet brief manner, while Sir George Cartier repelled it with a vigor which gave evident gratification to the audience. Indeed, if Mr. Reverdy Johnson was sincere in his belief, and if he purposely chose the opportunity in order to give expression to his opinion, he certainly counted without his host. Another topic of special interest to you was referred to by several speakers. This also was a question of ceding territory; but, instead of the United States being the prospective gainer by the transaction this time it is the Dominion of Canada which would be aggrandized. I need hardly add that I allude to the Hudson's Bay Company's territory. On the preceding evening Lord Granville intimated in the House of Lords that he has now made up his mind and offered a final proposal to the Company, on the one hand, and to the representatives of your Government on the other. In his speech last night he made special mention of this. It was likewise briefly noticed by Sir Stafford Northcote, the present Governor of the Hudson's Bay Company, and by your Minister of Public Works, the Hon. W. McDougall. Of course Sir Stafford could not say much, as he must consult not only his colleagues, but also take the opinion of the shareholders before closing with the Colonial Secretary's proposal. The Hon. W. McDougall, in like manner, was precluded, both by his official position and the occasion itself, from entering into detail; but he took advantage of the opportunity of returning thanks for the "New Dominion and the Colonies in the West," to enlarge on the necessity for a speedy settlement of the matters in dispute, so that the great territory of the North-West might be at once opened up and peopled. Whatever may be the success of the representatives of your Government now in this country in accomplishing their mission, there can be no doubt that their presence at the banquet of the Colonial Society, and their speeches on that occasion, will hereafter prove of no small advantage to the Dominion. During the past few weeks, the words "Hudson's Bay Company" have frequently appeared in the newspapers, and have more than once been uttered in Parliament. I think the public here is slowly awakening and becoming impressed with the magnitude of the issues at stake. It is quite certain that the shareholders and the servants of the company are apprehensive as to the result. Some very strong language has been used respecting the greed of the Canadians. Indeed, the chief difficulty of your Ministers now here must be to reduce the terms on which the final settlement is to be made. Not a few of the shareholders seriously maintain that they ought to receive five millions sterling for the relinquishment of their territorial claims. The misfortune is that they have been dazzled by the statements put forth by the company, and believe the charter to be impregnable. It may be that this belief will be shaken by some statements about to be made public for the first time, which, I understand, will appear in an article entitled "The Hudson's Bay Company," in the next number of the *North British Review*. I feel certain that the day of reckoning is at hand for the company. Should the present negotiations be broken off, the matter will assuredly be discussed in Parliament.

A cloud that has hung over the commercial horizon for a few days is now dispelled. War between France and Prussia is adjourned to a more convenient opportunity. The Belgium railway dispute is to be referred to arbitration; but the conviction is general that the contest is simply postponed, and is still certain to occur. In consequence of this, an uneasy feeling prevails to the detriment of commerce. There is much speculation on the Stock Exchange, but little solid business. The supply of foreign loans shows no signs of falling off. Russia is again a borrower; Turkey requires a trifle of two millions sterling, and is ready to pay 12 per cent for the accommodation; while Spain is about to ask for another twenty millions. The colony of Victoria has just obtained upwards of two millions wherewith to extend her railway system. As a result of these demands the value of money is increasing and an early rise in the bank rate of discount is inevitable. Meantime trade is dull, and confidence in joint-stock enterprise at a low ebb.

A bill has been introduced by a private member into the House of Commons with a view to regulate the working of life assurance companies. It is high time that something were done to remedy the existing abuses. Not long ago a witness in a court of justice, when under cross-examination, was compelled to admit that his

occupation had been the foundation of assurance companies, and that he made a treble profit, for he obtained something as their founder, a salary as manager, and a per centage when they were in liquidation. According to a statement I have met with, it would appear that during the past twenty-five years, 355 assurance companies have been founded, that of these 328 have ceased to exist. Last year 30 were projected and 17 became bankrupt. It is now proposed to exercise a supervision over the accounts, making it compulsory on every company which issues life policies to make a yearly return to a Government office of its income and expenditure; to furnish the balance sheet for the past year and a statement of the new business transacted, and to supply an actuarial report every 10 years. The penalty for non-compliance with the law is to be a fine of £20 for every day's delay. Even should this bill fail to pass, there must be legislation on the subject before long, because the present state of things is too scandalous to last.

Insurance.

Fire Record.—Seneca, March —,—.The residence of John Anderson took fire and was totally consumed. The family saved nothing of the contents, and only escaped in their night clothes.

Beachville, March 19.—The foundry and machine shop of R. Whitelaw, was totally consumed by fire. The tools of the workman were destroyed. The loss will amount to somewhere in the neighborhood of $5,000. No information as to insurance.

Dover East, Ont., March 22.—The Big Point Inn, kept by F. Martin, was burnt to the ground with all its contents. The loss is considerable, as there was no insurance. The fire originated from a defective stove pipe.

Guelph, March 20.—A shanty occupied by a switchman was consumed. It was the property of the Grand Trunk Company.

Davenport, March.—House occupied by Rev. E. T. Bromfield and most of the contents; we are informed there was no insurance.

A correspondent sends us the following account of recent fire losses in Nova Scotia:—Feb. 24, 6 buildings burnt at Digby, viz.: Small store, where fire originated, owned and occupied by B. Stack; loss on store, total value $100, insured in the Royal for $150; loss on stock, partial; $269 also insured in the Royal. Store owned by Mr. Comwell, total loss, insured in Royal for $400, full value. Stock of E. Payson insured in Royal removed without loss. Two stores owned by Estate John Hammond, valued at $500 and $600, total loss; insured for $400 each in Liverpool and London and Globe; one unoccupied, the other occupied by Churchill & Taylor, who saved their stock. Store owned and occupied by R. Thorn; store total loss, no insurance; stock saved. Store owned and occupied by D. Beman; total loss; no insurance; stock saved.

Feb. 26.—Adam McKay's framed boiler shop at Dartmouth, Halifax; total loss, $1000 on building in Royal, $1200 on stock in Liverpool & London and Globe. Owner losses heavily.

Feb. 26.—Barn in suburbs of Halifax, owned by P. Forristall, uninsured.

March 8.—Dwelling at Dartmouth, Halifax, owned and occupied by John Jones; total loss; value $600; insured for $400 in Ætna of Hartford.

March 11.—The "C. B. News" says on Thursday morning last, between the hours of five and six o'clock, a fire broke out in the dwelling house of Mr. Samuel E. Peters, at Cow Bay, which was entirely consumed; as also the Store adjoining, owned by Mr. Peters, and occupied by Messrs O. B. Spencer & Co., as a General Store. Both buildings and the stock of merchandise destroyed were partially insured in the "London and Liverpool and Globe Insurance" office. Some of the goods were saved in a damaged condition.

Port Dalhousie, March 26.—An unoccupied house of G. W. Reid; it is thought to be the work of an incendiary.

Warrington.—We were informed that the mill lately burned at this place was not insured; we now learn that there was a policy for $2,000 in the Provincial.

Uniformity in the Wording of Policies.—We have to thank Messrs. Taylor Brothers, of Montreal, for the following extract from the minutes of a meeting of London offices, held in London, on the 6th February, and would commend it to the notice of fire underwriters:

Resolved,—That, in order to prevent, in future, complications and delays, vexatious alike to claimants and the offices, such as have heretofore arisen in the settlement of losses from want of uniformity in the wording of all policies designed to cover one and the same risk, all the offices do simultaneously instruct their agents abroad that in all cases of joint assurance with other companies, uniformity of wording is essential for the convenience and security of the insured, as well as the offices.

That, in order to secure this important object, every agent be directed, before issuing a policy to cover any risk on which there is reason to believe that other insurances have been or are being effected, to point out to the proposers the importance of such uniformity, and arrange with them a form of wording to be used in all policies covering the same risk; and that the same precautions be strictly observed on any alteration being made, by endorsement or otherwise, in a policy.

Lancashire.—At the meeting of the Lancashire Insurance Company at Manchester on March 9th, it was stated that the income from fire premiums was £112,579; from life premiums, £39,527 and from interest, £16,635; and that the fire losses paid during the year amounted to £45,350 and the life claims to £15,978. A dividend of 10 per cent. was declared, and the reserve funds were reported to be £169,330 in the life department and £62,350 in the fire branch.

United Ports and General Insurance Company.—Arrangements have now been finally completed for the acquisition by this company of the business, good will, and connections of the Bristol Marine Insurance Company, Limited, a local Company which was started in 1864; and which has been very successful in accumulating a large and sound marine business. A branch office has been opened at Bristol for the west of England, and will, doubtless, secure a good share of business, more especially as a large number of shares have been placed there by the arrangements between the Companies.—*Post Magazine.*

Insurance Rebate.—This question still troubles the managers of our fire insurance companies. The meeting of the 17th inst. adjourned without having advanced on the subject of discussion. The report was referred back to the committee, and that a similar document might not reappear, the committee was enlarged by the addition of five other members, the committee now numbering ten. We learn that the committee now report that net rates of insurance should be adopted and adhered to, and that all rebate, brokerage, commission or other return of premium to the insured or others should be abandoned; that a fine should be the punishment of a breach of faith in these conditions, and that a deposit of $1,000 should be made by each company as a security for the fine imposed. We much doubt if these suggestions will meet with sufficient support to enable the Board to sustain them, and we greatly doubt if such a change in the method of transacting business would be altogether one of prudence. Even if all existing New York companies could be induced to enter this rather precarious citadel, new companies might appear upon the principle of commissions, and be sustained by a very powerful body of those whom we may term, under the circumstances, the disfranchised, and then the Board would be reduced to capitulation—*N. Y. Insurance Journal.*

New Life Assurance Bill in England. In the House of Commons on the 3d March, on the motion of Mr. S. Cave, leave was given to bring in a Bill to amend the law relating to life assurance. Mr. Cave said that it proposed to extend to life assurance associations similar provisions to those enacted by Parliament last year with reference to railway companies, for the publication of fuller and more uniform accounts. He was introduced in no spirit of hostility to assurance companies, by whom it was generally approved, and he believed he did not go too far in saying it would have the support of her Majesty's Government. He reserved a full explanation of the provisions of the Bill for the second reading.—*Post Magazine.*

Life Insurance.—The sum insured upon life policies in Great Britain is estimated at four hundred million pounds, upon which premiums amounting to twenty million pounds are annually paid. This is half the amount of the national debt, which is eight hundred million pounds, and the insurance premiums nearly reach the annual interest paid upon the debt, which is twenty-six million pounds.

Liverpool and London and Globe.—At the annual meeting, on the 26th Feby., the Annual Report of the Company for 1868, was read. From it we take the following extract:

"The capital in the hands of the proprietors was the same as last year, £391,752, and of this £146,742 was held by trustees, as considerations for Globe 6 per cent. annuities. The fire premiums of the year had increased to £867,374 0s. 1d., and the amount paid in losses was £509,91[illegible] 18s. 1d.: 1,123 life policies were issued, insuring £639,780; 167 proposals were declined for the sum of £118,300; 129 proposals were accepted, but not yet completed, for £131,200. The new annuity premiums were £23,403 5s. 8d.; and the renewals £242,238 2s. 9d.; giving as the premium income of the year a total of £265,641 8s. 5d. The claims under policies, including the bonuses on such as belonged to that class, were £193,573 6s. 5d.; 13[illegible] bonds for annuities were issued for £8,971 18s. 74 annuities had fallen in, amounting to £3,4[illegible] 4s. 9d.; the annuities now payable being £56,0[illegible] 15s. 10d. The reserve for this department was now £2,081,204 4s. 2d. In terms of the agreement under which the business of the Globe Office was taken over, a valuation had been made of the liabilities under their life policies, with the result of which there was every reason to be content. As the profit on the business for the quinquennial period, ending with the 31st December last, the sum of £35,957 16s. 5d. had been carried to the credit of the profit and loss account. The reserve surplus fund remained at £971,409 12s. 10d. To the credit of the profit and loss account was the sum of £211,237 17s. 11d., arrived at after making further liberal provisions for possible contingencies. From it the Directors had determined to take the sum of £117,525 12s. for distribution amongst the proprietors, which yielded a dividend for the year of 30 per cent., free of income tax, on the amount of their respective holdings. The balance at the credit of account would then be £93,712 5s. 11d. The funds of the Company thus consisted of capital, £391,752; life reserve, £2,081,204 4s. 2d. reserve fund, £971,409 12s. 10d.; undivided profits £93,712 5s. 11d.—total £3,538,078 2s. 11d. being an increase upon last year of £137,072 16s. 1d. After the report was read,

The Chairman, in moving its adoption, congratulated the proprietors upon the highly satisfactory position of the company, and the good dividend which the directors were able to offer to them. The progress of the company was evidenced by the important increase in the amount of the fire premiums, the aggregate of which far exceeded the receipts of any similar company in the world. In attaining that pos

tion, however, there had been no relaxatiou of the cautious policy which had hitherto been pursued by the directors. It would be hazardous at present to venture any opinion as to the prospects of the present year; at the same time he might remark that the year opened very favorably, and encouraged the anticipation of a good result. It would no doubt be pereeived that the percentage of loss on fire premiums had exceeded the ratio of last year; and it was to be regretted that some steps had not been taken by the Government for the establishment of some board of investigation, with a view to trace the origin of fires. Until some such step was taken he feared they would not be able to reduce the average of losses in conneetion with their fire business. The directors, although satisfied with the favorable result attained, had investigated, and would continue to investigate, each description of business, with a view to improve still further the general result. With regard to the life business of the company, the progress made might also be considered to be satisfactory, as the new premiums showed an increase over those of the preceding year, and the aecumulated funds of that branch now exeeeded the large sum of two millions.

Transfer of Interest in Life Policies.—The following clause was added to Mr. Carter's Bill in Committee of the Quebec Legislature :—"Notwithstanding, and without prejudice to articles 24, 82 and 25, 91, of the Civil Code, any person whose life is insured, may by notarial or other instrument in writing, and without any inducement on the poliey, assign and transfer as collateral security for money or otherwise, any portion of the interest in the said policy not less than one fourth thereof. Such transfer, when duly served upon the insurer or his agent, shall be binding on the said insurer, if at the time of the service, the policy shall have been produced, and he or his agent shall have been allowed, if he thinks fit, to make an entry thereon of such transfer ; and thereupon, whether such entry shall have been made or not, the trausferee shall have the same claim against the insurer as he might have had if the transfer had been made upon the policy, and he were the holder thereof."

A Misnomer.—We notice frequent allusions in the advertisements and year books of Ameriean Life Insuranee Companies to their "non-forfeitable" policies. The phrase, so far as the non-forfeiture of a policy *for any cause* (assuring ahead the payment of annual premiums) is a misnomer as applied to American policies. In every stage and age of a policy it is forfeitable for fraud in the original application, whenever that fraud is discovered. Policies, are, also, always forfeitable in case of the violation of any one of the several "conditions" named in the body of the policy, such as suicide, traveling without special permission beyond specified limits, &c. Therefore, in American practice, a non-forfeitable policy is a misnomer.

The *Prudential*, a wealthy Londou life office, with an income of $1,075,000, has recently resolved to issue policies that shall be "unforfeitable, unconditional and unchangeable," for fraud, non-payment of premiums, or any other cause. The purpose is to make a policy of insurance an absolute negotiable mercantile security, good for its face in the hands of every boua fide holder for valuable consideration. Besides every poliey will expressly state what sum can at any time be withdrawn on the diseontinuance of it.

The assured will thus always have the option of obtaining either an ascertained fixed sum payable at deeease, or, in case of need, of withdrawing a certain amount, aceording to the duration of the policy, such amounts being set forth on every policy, and rendering unnecessary any future reference to the eompany on these points, as is the case with ordinary assurances. Creditors, bankers, capitalists and others, who are in the habit of making advances collaterally secured by life policies, will find this form of policy a convenience, as they can at any time learn, by mere inspection the exact value, either immediate or reversionary. Every policy issued on this plan will be without any conditions as to voyaging, foreign residence or other usual limitations. By this freedom from restrictions of all kinds, the policies will become at once positively valuable as actual seeurities. The number of premiums is strictly defined. The longest term provided for is twenty-five years, and the shortest five years, as shown by the tables Thus, bankers, creditors, and others, holding policies of this class as security, may always know the utmost amount they may be called upon to advance so as to maintain the full benefit of the assurances. The Prudential's policies being unforfeitable and unconditional, they will be unchallengeable on any ground whatever. They may therefore be aptly termed absolute security policies.—*Insurance Monitor.*

—The Directors of the Reliance Mutual have appointed Mr. Hugh Gibson, late of the Standard, resident secretary of that compauy in Glasgow.

ASSOCIATION OF CANADIAN LAKE UNDERWRITERS.

A meeting of this Association was held on the 24th inst., to take into consideration certain matters relating to the practical working of certain clauses of the Insurance Act of last Session.

Correspondenee was read from the Marine Department, Ottawa, in reference to the petition for an amendment of the existing law for the regulation of inland navigation.

A number of questions were raised respecting the clause affeeting Marine Insurance Companies. It was considered desirable that some steps should be taken to determine whether a Marine Company allowed by law to transact Ocean, but not Inland Marine Insurance, can legally insure a vessel from Toronto to Liverpool, or even from Toronto to Halifax ; also whether it is Ocean or Inland Marine Insuranee from Montreal to Quebec. Instanees were given in whieh the provisions of the act had been deliberately violated by agents who have canvassed for and obtained risks for foreign companies, not having any deposit in Canada, and received the premiums on this side of the lakes. It was considered, that the fact of the policies being issued on the other side, does not protect such agents from the guilt of violating the law, but makes them liable to the penalty mentioned in clause 13, which says : "Any person who shall deliver any policies of insurance, or collect any premiums, or transact any business of Insurance *** shall be liable to a penalty of one thousand dollars."

The companies composing the Association decided, for the present, not to prosecute parties so violating the law, but merely noted the cases of which they possess uncontrovertible proof, until the whole matter is fully iuvestigated, when proceedings will be taken against all who continue to disregard the law, and to render themselves liable to the penalty it imposes.

THE NEW YORK STATE FIRE INSURANCE COMPANIES.

From the official returns of the Fire Insurance business of this State we have the following statistics up to December 31, 1868:

Chartered capital paid up	$28,911,232
Total assets	49,704,334
Net cash premiums	22,774,624
Total income	26,039,098
Total losses in 1868, as reported	12,948,257
Disburseinents in 1868	22,602,423
Expenses of management	6,486,544
Liabilities	11,818,174
Surplus over reinsurance and capital	9,249,722
Gross amount of fire risks written	2,534,683,704
Total cash dividends deelared	2,740,536
National and State Taxes	1,257,679

By the tables of the New York Insuranee Department, from 1859 to the present time, we find for nine consecutive years the following result:

Year.	Capital.	Dividends.	Per cent.
1859	$20,007,000	$2,851,722	14.25
1860	20,482,860	2,469,090	12.05
1861	20,282,860	2,111,788	10.41
1862	20,432,860	2,043,898	10.00
1863	23,632,860	2,024,742	8.56
1864	28,807,070	2,483,370	8.62
1865	31,557,010	2,621,284	8.30
1866	30,649,660	2,073,375	6.76
1867	28,561,232	2,416,354	8.46
Total	$224,413,412	$21,095,628	9.40

—showing a decrease in per eentage of average dividends from 14.25 per eent. in 1859, to 6.76 per cent. in 1866, the year of the organization of the Board, and 8.46 per cent. for 1867, the first year of its efficient working, and a general average for the entire nine years of only 9.40 per eent.

We also find that the per centage of losses on net premiums have increased from 42.57 per cent. in 1859 to 76.08 per cent. in 1866, as will be seen from the following table:

Year.	Premium.	Losses.	Per cent.
1859	$6,299,688	$2,681,986	42.57
1860	7,261,595	3,984,441	54.87
1861	6,827,736	3,771,189	55.23
1862	7,742,190	4,679,323	60.44
1863	10,181,030	4,189,673	41.15
1864	15,618,603	8,737,600	55.94
1865	17,052,086	12,046,793	71.38
1866	20,786,847	15,312,751	76.08
1867	22,071,638	14,423,122	65.33
Total	$113,841,418	$69,826,880	61.33

DAMAGES BY REMOVAL.

An "Adjuster," writing to the *Insurance Monitor* on this subject, says :

First. As against loss by fire, the underwriter is sole insurer, but for the damages by removal, the owner of the property is co-insurer. It is precisely as if one insurance company insured against loss and damage by fire and damages by removal, and another company insured the same property against damages by removal only. Or it is the same as when one company insured on flour and pork, and another company insured on pork only. The former pays the loss on the flour first, and the balance of its policy eontributes with the other policy for the loss on the pork. This rule, I believe, is uniformly conceded and adopted, and it is fully sustained by the Supreme Court of Missouri in case of Augelrodt & Barth *vs.* Delaware Insurance Company. This case was decided in 1862, and seems so conclusive on the point that it has not since been questioned. Bearing in mind that as against damages by removal, the owner stands co-insurer, precisely as though he were another insurance company, "'Tother side" must be careful about "inverting the order of adjuster's calculation," lest he "hoist by his own petard." Suppose A insures $5,000 against loss and damage by fire and damages by removal, and B insures $5,000 on the same stock against damages by removal only. Value of the stock $10,000. A loss happens by burning, say $4,000, and damages by removal $3,000. Now apply "Totherside's" rule. 1st. A contributing on $5,000, with B $5,000 to the damages by removal. $3,000, one half $1,500, would leave but $3,500 to pay the loss of $4,000 by the burning. But let us look again at the original example stated, and which is the subject under criticism. Here Underwriters had a risk against fire of $5,000, on $10,000 worth of goods. A fire happens, by whieh $3,000 of the goods are eonsumed; this loss falling wholly on Underwriter. Now what interest did Underwriter have in the goods saved? Or how much would his loss have been increased had the whole stock been burned? Manifestly he had but $2,000 in trust in balance

of the stock, whether saved or lost, while the owner had $5,000. There was in fact but $2,000 insurance on the goods saved, except by the owner. The fire itself has settled this. It had first absorbed $3,000 of the policy. Suppose it had all been absorbed by the goods consumed, there certainly would have been nothing left to contribute to the damages by removal. I fail to see the difference in principle, whether the whole or any part of the policy was absorbed by the burning, as only the balance contributes with owner (the co-insurer) on the damages to goods removed, and if there is no balance, the owner, of course, has to stand the whole of the latter damage.

Now, there is no principle of justice in one insurer claiming contribution from his co-insurer, to the prejudice of the assured, unless the contract has some stipulation which renders such result inevitable. But when the contract is silent, it is to be otherwise construed; for two reasons. First, by a well-known rule of law, contracts are to be construed most severely against the parties making them. And, second, the assured has paid for the indemnity for himself, and not for one of the co-insurers. These principles have the same application where the owner of the property stands as co-insurer, as in cases where he is is fully covered. But this risk of damages by removal is made by the contract a separate and distinct subject from that of the risk of burning, and is provided for accordingly in the most distinct and explicit manner. The risk of burning is primary, and that of damages by removal is secondary. The primary duty under the policy is, first to be performed, and then the secondary, to the extent of any further indemnity afforded by the policy. In some cases the policy may be wholly absorbed by the first, and in other cases it may be untouched by the first risk and wholly absorbed by the second, but in no case can any claim be sustained beyond the sum underwritten in a fire policy. From a somewhat extended experience and observation, I have come to the conclusion that it would be about as well for underwriters, in the long run, to let *the insured public* settle the rules of adjustment of fire losses, provided they would uniformly live up to them and agree to be satisfied.

Railway News.

Northern Railway.—Traffic receipts for week ending March 20th, 1869.

Passengers	$2,464 37
Freight and live stock	4,930 95
Mails and sundries	212 66
	$7,607 97
Corresponding Week of '68.	6,418 74
Increase	$1,189 23

Northern Railway.—Traffic receipts for week ending March 27, 1869:—

Passengers	$2,547 40
Freight	5,554 62
Mails and sundries	190 30
Total receipts for week	$8,291 72
Corresponding week 1868	8,252 15
Increase	$39 57

Great Western Railway.—Traffic for week ending March 12, 1869.

Passengers	$22,257 09
Freight	35,212 46
Mails and Sundries	2,418 67
Total Receipts for week	$59,888 22
Coresponding week, 1868	55,676 15
Increase	$4,212 07

Detroit and Milwaukee Railroad.—The report for the year ending 31st December, 1868, show that the gross traffic and rents for the year were $1,718,093.72, being $43,214.42 less than those of 1867. The working expenses, taxes and insurance were $1,013,636.06, being $21,116.96 greater than those of 1867. The net revenue is $704,457.66, being $69,395.26 greater than that of 1866, and $64,331 38 less than that of 1867. This has been applied to the interest on the bonded debt existing prior to 1866, $368,685 80; in part towards interest on bonds of June 30, 1866, $53,550; to sundry discounts and exchanges, $5,670.27; to new works and rolling stock, $88,899 32; to rebuilding on account of the fire in April, 1866, $1,571.52; to new cars on same account, $93.08; to payment for baggage and merchandise consumed in that fire, $20,573,15: to old debts of the Detroit and Milwaukee Railway Company, for supplies, $3,588.71; to redemption of bonds issued to the Commercial Bank of Canada, 30th June, 1866, $100,000; and on account of dividend of dividend to Great Western Railway Company of Canada, on preference shares, $73,325; the whole, exclusive of interest and dividend, amounting to $311,725.78; and after deducting the amount received for insurance on the steamer *Milwaukee*, less paid for losses of through freight and baggage, being net $36,717.96, to $175,007.82. The balance to credit of net revenue, 31st December, 1867, was $75,210.84, and the balance to credit of that account 31st December, 1868, is $103,429.61.

Mining.

NOVA SCOTIA GOLD FIELDS.

(From Our Own Correspondent.)

Halifax, N. S., March 22, 1869.

There is but little progress to report. Messrs. Huse & Lovell omitted a bar of 109 ozs. received from the Uniacke Company's mine in last statement. The Strawberry Hill Company, of Tangier, have sent up a bar of 272 ozs. From Sherbrooke a new lode is reported on the property of the Canada Company. From Wine Harbor a slight falling off for February, through lack of water for the mills, the flumes having frozen. A serious discrepancy occurred in my report published in The Monetary Times of 4th March, under mill returns for Wine Harbor, having obtained them by deputy, while completing the octennial table for the mail. The mistakes are as follows, and in assuming the blame and apologising for them a repetition of anything of the kind is promised to be guarded against:

	tons.	cwt.	oz.	dwt.	gr.
For Orient Mill	16	0	0	1	7
Read	0	16	0	1	7
For Victoria Mill	120	0	0	10	11
Read	120	10	45	6	11
For total, Wine Harbor	266	5	43	11	6
Read	251	1	88	10	6

In the table for 1860 to 1868, the fraction under "daily average number of miners" should have read "twelfths" instead of "two years."

To future communications will be added, in turn, a descriptive as well as statistical review of each district, so that the current volume of the Monetary Times will present a complete record of the most interesting data from the mining region.

Remarkable Mountain of Salt.—In the Pahranagat District, in the southeastern part of the State of Nevada—distant from Austin, estimated at 180 miles—is a remarkable mountain of salt, about 70 miles—south of the mines. It is reported to be about five miles in length and 600 feet in height. The body of salt is of unknown depth. It is chemically pure and crystalline, and does not deliquesce on exposure to the atmosphere. Like rock, it requires blasting from the mines, whence it is taken in large blocks, and is transparent as glass. This would afford an abundant supply to the world, could it be cheaply mined and transported; but it now stands in the wilderness, an object for the admiration of the curious and the inspection of the scientific. It is believed that there is but one other place on the globe where it exits in such a state of purity in workable quantities, and that is at Cracow, Poland. This is but another evidence of the state of purity, in which the force of nature has left her deposits in this interesting portion of the continent.

OTTAWA BOARD OF TRADE.

In the report of this Board for 1868, the following paragraph in reference to the banking system and other matters are of interest:—

"The Committee on banking are of the opinion that the present Canadian system of Banking is based upon sound principles and has worked most successfully in developing the resources, and carrying out the business of the country, and they would deplore any legislation that would curtail the privileges of the Banks as they exist at present. The Committee think that they are not called upon to enter more fully into the question, as they are happy to find that the Government has determined to submit the whole question to a Parliamentary Committee, and they trust the result will be to establish on a permanent footing, the present system which so largely enjoys the confidence of the community.

The Committee beg to report that in view of the fact the Parliamentary Committee is now sitting on the insolvent laws, and that the Government have taken steps to elicit the opinions of the Boards of Trade, and others having practical experience of the working of the law, do not deem it necessary to offer any suggestions, but would express a hope that the result of the deliberations of parliament will be the enactment of a more perfect and satisfactory law.

The "Act to facilitate the winding up of Insolvent Companies" was brought under the notice of the Council, when it was resolved that the following amendments were necessary, viz., in sub-section 1 of clause 5, after the words Company in the first line "against lands" be added; and in sub-section 2 of same the words "provided that when any Company shall be able to appropriate 10 per cent over its working expenses towards payment of interest and sinking fund on its debt—or whenever a sufficient sum is realized to pay legal interest on its debts, and its plant and property is of sufficient security to the creditors shall be exempt from the operations of the provision of sub-section 3 of clause 4."

Insolvents.—The following appeared in the *Gazette* of the 24th:—

Charles Banting, Tecumseth; Wm. Hill, Cornwall; Ammon Powell, Fenelon Township; Wm. Torrence, jr. Guelph; William Steward. Toronto; George French, Harriston; Henry Penford, Paris; John A. Robinson, Milton; Joseph Beninger, Belleville; Wellby McAlister, Brantford; Douglas Gonck, Guelph; Thomas McCormick, Barrie; C. McGrory, jr. Prescott; Alexander Smith, Parkhill; George Rankin, Windsor; Thomas Dunlop, Walkerton; Aaron Reynolds, Woodstock; Canfield Dorwin and R. Gault, Montreal; J. C. and W. Bond, Walkerton; Samuel McNeil, Cornwall; George Hamphries, Ottawa; William Campbell, Goderich; James Armstrong, Toronto; Frederic Warrick, Toronto; Patley Ayre, Lindsay; Thos. Levallee, jr. Quebec; Forest, Brothers, Quebec; Damien Herault, Montreal; Thomas Addie, Cobourg; John Ford, Prescott; William Smith, Robert Edminston and Hugh Mathewson, Montreal; James Mitchell, Petrolia; David Richards, Plymp ton; Angus Sutherland, Montreal; Geo. Muller, Tilsonburg; Peddie and Bayley, Woodstock; Chas. Warner, Napanee; Rueben Hurlbut, Whitby; J. McKinnon and Charles Augustus Clark, Belleville; F. X. Lapage, Quebec; Alphonso De Celles, St. John.

THURSDAY, APRIL 1, 1869.

THE BANK CHARTER QUESTION.

EMBARRASSMENT DURING THE TRANSITION PERIOD.

V.

In every country there is a certain relation between the business to be done and the amount of money necessary to do it with. What that amount ought to be, experience alone can determine. For if we could arrive at the transactions of a community in which money plays a part—which is impossible—it would form no guide to the amount of money required, since so much depends upon the rapidity of circulation, and the number of transactions which any given number of pieces of metal money or bank bills may be used to consummate. But where there is a mixed currency, of specie and bank notes, and where there is no great variation in the aggregate amount at a given season of the year, it is fair to assume that that amount represents a normal condition of the currency. The circulation of the various banks in the Dominion, at the end of January last, may be taken as the average circulation. At that period there had been neither speculation on the one hand, nor on the other depression—nothing to give undue inflation or enforced contraction to the currency.

In view of the impending legislation for the renewal of the bank charters, and on the subject of the currency, the bank returns made up to the 31st January may be studied to advantage. They may be presented under three different aspects: we may take the entire return, or we may take the returns for the Banks of Ontario proper by themselves, or we may take the latter with an addition of two banks, which, though they are not Ontario banks, are, nevertheless, doing considerable business in this Province: the Bank of British North America and the Merchants Bank.

The enquiry will be more exhaustive, and present the question in a fuller light, if we view the returns in these various aspects; and we shall do so for the purpose of showing what would be the effect on the circulation of a compulsory extension of the Provincial notes, so as to supersede the existing circulation of bank notes, or by the adoption in this country, substantially, of the national banking system of the United States. In either case the banks would have to make an advance to the government, which would really be in the nature of a forced loan, of an amount of capital equivalent to their future circulation. It is obvious that so long as the requirement of specie payment was kept up, so radical a change in the constitution of our banks would press heavily on their resources, and greatly curtail their general usefulness. In what way, and to what possible extent, this could be done, we now propose to consider, taking the bank returns for our guide.

At present the banks are required to hold a limited amount of government securities. In either of the alternative schemes above named they would be required to deposit with the government, securities to the full amount of their circulation. Let us see what the difference would be between the amount of securities they now hold and what they would then be required to deposit. The circulation of the banks on the 31st January was $9,720,253, and they held government securities to the amount of $3,352,016. To enable them to maintain their present circulation they would have to extend their purchase of securities by $7,340,262. Those securities would have to be purchased with gold, bills of exchange, or something else equivalent in value to gold. But it is obvious that the banks could not bear so great a strain on their resources as this enforced loan, wrapt up in another and less odious name, would demand. They would not find it convenient to buy between seven and eight millions of additional government securities, and they would have to content themselves with a much less amount. As the amount of the securities they deposited would, with those they already possess, be the measure of their future circulation, it is evident that an unnatural contraction of the currency would take place, from which the business of the country would seriously suffer.

From this general view let us descend to the Provincial aspect of the question. By far the largest part of the circulation of the Dominion is to be found in Ontario. The Ontario banks alone circulate over five millions of notes (5,018,607). These banks hold among them $692,639 in government securities. The difference between their circulation and the securities they hold is therefore $4,325,968. That is the amount they would, under either of the schemes in question, have to advance to the government for the privilege of maintaining a circulation equal to that which they now sustain. Their present investment in government securities is but slightly over the requirement of ten per cent. of their paid-up capital; while under either of the alternative schemes we are discussing they would be obliged to loan to the government considerably over four-sixths of their entire capital. Whatever amount they fell short of that point would be deducted from their future circulation. It would probably not be too much to say that such a requirement would reduce their circulation by one-half: a circulation which rests on a specie basis, and in which the notes are maintained at par with gold for which they can any day be exchanged.

There are no means of arriving precisely at the circulation, in Ontario, of the Merchants' Bank, and the Bank of British North America, but it is considerable, and this Province would suffer through them, as well as our own local banks, if the changes in question were made.

The contraction of currency thus artificially superinduced, would, by an inevitable law, produce a fall in prices. Every producer would get less for the results of his labor; industry would be discouraged and production would suffer a diminution. There being less to sell, and lower prices for what was sold, foreign bills of exchange—unless importations were correspondingly diminished—would be scarce and dear; thus while we got less for our produce we should have to buy imported articles at a dearer rate. The country would lose at both ends by the unnatural contraction of the currency operating through a forced loan which would have been made under false pretences.

FOREIGN MARINE COMPANIES.

The Underwriters Association has raised the question whether foreign marine insurance companies, which have not made a deposit under the Act, have the right to accept premiums here and issue policies from the other side of the lines, or to evade the law by doing inland marine business under the name of ocean marine. The Act says: "Except companies transacting in Canada "ocean marine insurance business ex- "clusively, it shall not be lawful for any "insurance company to issue any policy of "insurance, or take any risk or receive any "premium, or transact any business of in- "surance in Canada, etc., without first "obtaining a license from the Minister of "Finance." It is provided that this license shall issue on a certain deposit being made, in the case of an inland marine company not less than fifty thousand dollars, or proper securities. Any person who delivers any policy of insurance, or collects any premium, or transacts any business of insurance on behalf of a company which has not complied with the law is liable to a penalty of one thousand dollars for each offense, or in default of payment to imprisonment for three months.

The wording of the Act is certainly extensive enough to embrace cases such as those complained of by the Underwriters' Association, and it is the duty of the proper authorities at Ottawa to take prompt measures to save marine companies that have made a deposit from the unfair competition of companies that have not done so. It is little to the credit of respectable foreign marine companies that they allow themselves to be drawn through the mire of evasion and trickery for the sake of the premiums they get here, and we scarcely think that the head offices are aware of the dishonor thus brought upon companies otherwise unimpeachable. Large and wealthy companies should be above the meanness of stealing business in this manner.

THE MONEY MARKET.

A marked change is observable in the condition of our local money market within the past fortnight. The demand for money has greatly increased, absorbing a large portion of the surplus seeking investment. Building Societies, and companies whose business is chiefly with the country districts, now find ready borrowers for all the cash they have at their command. The demand in this way has been larger than for some years past. Some farmers are, we understand, so foolish as to borrow money in preference to selling their live stock and the produce of their farms at the present reduced prices. The rate on mortgages in the open market is firmer, and in many cases from one-half to one per cent. advance on the ruling rate for a long time past (8 per cent) has been readily conceded on good mortgages. This change is no doubt, to a very great extent, the result of the adoption of a more conservative policy by wholesale merchants. Confidence has been somewhat shaken, resulting in an inclination rather to reduce credits than to increase sales, and the consequent pressure brought on country merchants for payment, has caused them to borrow or to compel their creditors to do so, in order to pay their accounts.

Western Assurance Company.—We have seen a statement of the business of this Company for the half year, ending the 31st December, 1868. During that period the premium receipts amounted to $145,617; and the total expenditure including losses, reassurances, and an estimate of the claims under adjustment at the end of the year, footed up to $111,021, leaving a balance in favor of the Company of $34,596. The net assets at the end of the year were $186,059 exclusive of unpaid capital, and these figures have been, as appears from the Company's books, considerably increased within the three months of the present year. $50,000 have been deposited with the Government in compliance with the provisions of the Insurance Act. The premium receipts are now at the rate of $300,000 per annum. We are glad to state on the authority of the management, that the Company's shares have appeared once more in the market; transfers at 50 occurred some time since, and we learn that there are now buyers at an advance on that quotation.

North British and Mercantile.—In alluding to the annual report of this Company last week, some inaccuracies and misplacement of figures occurred. These would be readily detected on reference to the Report itself, but to prevent misapprehension we desire to make a few corrections. We desired to direct attention to the fact that an increase of £81,559 had occurred in the net fire premiums over last year, and the gross fire premiums for 1868 amounted to no less a sum than £491,288 19s. 11d. The losses by fire were £222,792 14s., or a little over 45 per cent. of the gross premiums in the fire department. Out of last year's fire premiums £134,515 were reserved to meet losses on unexpired fire policies of that year.

In the Life Department 908 new policies were issued, assuring £738,582 and producing in new premiums £23,571. The Company's assets now amount to fully fourteen millions of dollars, and the annual revenue from all sources is nearly four millions of dollars.

—Dr. Guy R. Phelps, President of the Connecticut Mutual Life Insurance Company, died at his residence, in the city of Hartford, on Thursday, March 18.

Financial.

TORONTO STOCK MARKET.

(Reported by Pellatt & Osler, Brokers.)

The Easter Holidays have interfered to some extent with the business of the week. There has been very little change in quotations and stocks generally closed firm.

Bank Stock.—Montreal has again advanced with sales at 143 and 143½; there are no sellers now under 144. There are buyers of British at 104½ and sellers at 105½. Very little doing in Ontario; there are sellers at par and buyers at 99½. Buyers would give 120 for Toronto, but there are no sellers under 121½. Holders ask 80 for Royal Canadian but buyers will not advance over 76. Small sales of Commerce were made at 103, at which rate it is still procurable. Sales of Gore took place at 41. There were sales of Merchants in the beginning of the week at 107, but it has since advanced, there are no sellers now under 108. Buyers offer 100½ for Quebec, no sellers. Small sales of City occurred at 102½ to 102¾, sellers now ask 103. Du Peuple is held at 108½ with buyers at 107½. For Jacques Cartier 109 would be paid but holders ask 109¼. Buyers offer 97 for Mechanics. Sellers want 105½ for Union with buyers at 104¾. In other banks nothing to report.

Debentures.—Canada currency and sterling six per cents and Dominion stock are in great demand at quotations; five per cents are offering at 94½. No Toronto in market, they could be readily placed to pay 6⅞c. interest. County have been sold to some extent during the week.

Sundries.—Buyers offer 108 for City Gas, little offering. There are buyers of British American Assurance at 55 and sellers at 56. Sales of Canada Permanent Building Society were made at 126 at which rate it is still procurable. Western Canada Permanent Building Society is offered at 121½ with buyers at 121. There is but little Freehold Building Society in market, buyers offer 110½. Montreal Telegraph nominal as quoted. There are buyers of Canada Landed Credit at 77; very little in market. Mortgages have been freely dealt in at 8, 8½ and in some cases 9 per cent. Money is in demand, and advanced rates are paid.

QUEBEC CITY FINANCES.

The citizens of the ancient capital appear to be somewhat disturbed at the prospect of having to pay a special income tax. Since 1859, the City debt has been increasing without a proportionate increase of revenue. During the next eight years $2,325,194 of debentures have to be provided for, of these $809,021 mature in 1870. It is stated that the arrears of assessment and special tax uncollected on the 31st December, 1868, amounted to $255,116 55, and it is also alleged that within the last twelve months a small amount of the city debentures could not find a purchaser unless at a sacrifice of about ten per cent., although yielding seven per cent. interest, and having only five years to run. Such a state of affairs naturally begets anxiety on the part of those who expect to bear a share in relieving the city from the burden of debt which it has taken on its shoulders. Some advocate the appointment of three Commissioners whose duty it shall be to take the place of the City Council in the administration of civic affairs. The justification for such a move is proved in the following summary:—

"The imminent danger of civic bankruptcy, the reckless disregard and contempt of all legislative enactments shown for years by the Council, their utter incapacity or persistent and ruinous neglect to collect the revenue of the city; their continually recurring applications to Parliament for additional powers of taxation; the evidences of gross departmental mismanagement, which are periodically coming to light; and, finally, the absolute necessity of confiding the management

and control of civic affairs, for a few years, to the undivided attention of men not only of integrity, but of financial ability, prudence and experience.

How the National Bank System Works.—The first National Bank of Rockford, Illinois, was started in June, 1864. Its capital stock was $50,000, owned almost entirely by two parties. The Rockford *Register*, says: Early in 1865, Mr. Griggs resigned the cashiership in consequence of his inability to reconcile his ideas of sound banking with those of the principal owner. George W. Stratton succeeded Mr. Griggs, and continued to be cashier up to the time of his sudden disappearance. The bank was, some time after the change in the cashiership, visited by J. H. Dunham, of Chicago, National Bank Examiner for the District, who found such a condition as in his judgment to justify the Government in winding it up, and he so reported to Mr. Clark, Comptroller of the Currency. No action was taken by the Comptroller, and he and his successor, Mr. Hulburd, were afterwards frequently notified by Mr. Dunham that the bank was in an unsound condition, and should be wound up. Secretary McCulloch was also in possession of the same information, but no action was taken by the officials to close the concern. Mr. Dunham finally resigned his office on account of the neglect of the Department to act upon his recommendation.—Within the last few months the bank has been reported as in an unsafe condition, but as in former cases the recommendations of the examiner were disregarded, and the bank allowed to continue. On Monday evening of last week the cashier left the city, ostensibly for the purpose of visiting Chicago to raise funds for the bank, and the next day the doors were closed. S. B. Scott, of Milwaukee, examiner, took possession immediately, and found the entire assets in the vault footed up about ten dollars in postal currency! Everything else had been abstracted. It is difficult to ascertain the liabilities of the bank, but it is believed that they will scarcely fall below $100,000.

International Coinage.—A bill was introduced into Congress last summer to establish an international metrical system of coinage, which was submitted by the Secretary of the Treasury to J. M. Elliot, for examination. This gentleman has just reported favorably upon it, and it may probably shortly become law:—"The bill provides: First, That the future gold coinage of the United States shall weigh one and two-thirds grammes to the dollar, and shall be nine-tenths fine,—that is. each dollar shall contain one and a half grammes of pure gold, and the remainder shall be alloy. Second, Such coins shall be legal tenders in payments after a specified future date, and $1,003 of this new coinage shall be the legal equivalent of $1,000 of the old coinage of the United States. Third, That they shall have their weight in grammes and fineness stamped upon them. Fourth, That silver half-dollars and smaller silver coins shall, in future coinage, consist of standard silver, nine-tenths fine, and weigh twenty five grammes to each dollar of value; and shall have their weight and fineness stamped upon them; and shall be legal tender for payment of all sums not exceeding ten dollars." Were this act in operation, the following gold coins would be equivalent to each other,—viz., three German Union crowns, twenty American dollars, one hundred French francs, four English sovereigns.

—The St. John *Telegraph*, says of the finances of New Brunswick: It appears then that, throwing out of the accounts the items of income and expenditure properly belonging to the previous fiscal year or years, and also eliminating from them items on both sides not belonging to the regular Provincial income and expenditure, such as Railway construction and Railway subsidies, &c., the proper Provincial Revenue for the year is.....$442,341

Corresponding Expenditure..... 412,055

Surplus.....$30,286

Law Report.

MORTGAGE INTEREST.

A mortgagor's interest is in the property, so long as his right of redemption continues. Even after he has sold the property subject to the mortgage, he will still retain an insurable interest, as he is still liable to the mortgagee for any injury that may occur to the mortgaged estate, and thus diminish its value as security. When a mortgagor insures in his own right, and assigns the policy to the mortgagee as security, or makes the policy payable in case of loss to the mortgagee, then the underwriter is subrogated to the mortgagee's securities.

The assignment of a part of a mortgage debt secured by insurance, will not void the policy as to the balance.

In answer to a question in the application as to incumbrance upon the property, the amount as then existing was stated. An additional mortgage was subsequently executed, and an existing policy assigned as collateral security therefor, held: that the execution of the latter mortgage, without notice to the company, did not avoid the policy.

The sale of mortgaged property by a master of chancery, under a foreclosure, terminates the interest of the mortgagor, though no deed has yet been executed.

A mortgagor's insurable interest is not affected by the fact that the mortgage exceeds the value of the property.

A mortgagor, whose equity of redemption has been seized on execution, may recover the entire value of the building, not exceeding the sum insured.

THE MORTGAGEE.

The mortgagee's interest is in the debt secured by the policy. He must possess an equitable interest when the insurance is effected and when the loss occurs. If a mortgagee insures with his own funds, for his own exclusive benefit, the insurance money paid on the loss is not in discharge of the mortgage; but, he if insures at the request of, and for the benefit of the mortgagor as well as himself, the money paid is in discharge of the indebtedness.

When the interest of a mortgagee is insured by himself, the underwriters, in case of loss, on paying the mortgage debt, are entitled to subrogation of the securities.

The holder of a mortgage for the purchase money may insure for his whole interest; and is not bound to look to the land for its value; the underwriters being entitled to subrogation on payment of the loss under the policy.

A policy of insurance, assigned as collateral security for the payment of a mortgaged debt, is subject to all the express stipulations of the policy; and is liable to be avoided in the hands of the assignee by any subsequent breach of the conditions of the policy by the assignor, though the assignment may have been duly assented to by the insurers.

A lien upon property creates no lien upon any policy held by others upon such property; hence the mortgagee has no claims upon a policy of the mortgagor upon the mortgaged property, nor can the mortgagee insure the property of the mortgagor.

The purchase of property already subject to mortgage for debt, exceeding its value, has no insurable interest therein, unless he has assumed the payment of the debt.

Whether the interest of a mortgagee in property as security for a debt, is insured generally or specifically, he can recover only to the extent of that interest.

Notwithstanding the form of the contract, a mortgagee insures—not the ultimate safety of the whole property—but only so much thereof as may be enough to satisfy his mortgage. It is not the specific property that is insured, but its capacity to pay the debt.

The insurance of an exclusively mortgage interest is not upon the property, but is simply a guaranty of the payment of the debt, in case of loss of the security by fire. In this case the underwriter becomes subrogated to the security.

If a policy of insurance against fire be assigned to a mortgagee, with consent of the insurers, the assignee can recover, in case of loss, only where the assignor could have done so, had no assignment been made. Such assignment does not change the policy into one of indemnity to the assignee; the interest of the mortgor is alone covered by it.

If the owner of an insured mortgage interest part with any of his securities, or if a portion of the mortgage claim to be paid before loss, the underwriter is only liable for the amount remaining unpaid. But if the insured parts with a portion of his securities, or receives a part of the claim after suit is commenced against the underwriter, it does not affect the case.

When the mortgagor effected insurance in his own name, and assigned the policy to mortgagee with consent of the underwriter, and the latter recovered from the company more than enough to pay his debt: held, that as to the balance, he was trustee for the mortgagor.

It is not competent for the underwriter, in order to diminish or defeat recovery by the insured, to show that the mortgaged premises, notwithstanding the loss, are still ample security for the debt.

Condition Requiring Particular Account of Loss.—One of the conditions of the policy in this case required the insured within thirty days after loss "to deliver in a particular account of such loss or damage, signed by their own hand and verified by their oath or affirmation, and by their books of account or other proper vouchers." The plaintiff sent in his affidavit, stating in general terms the value of the different kinds of goods destroyed, but without in any way mentioning his loss on the buildings insured, the mere statement as to them being that they had been totally destroyed, and without verifying his deposition by account books or other proper vouchers. *Held*, the following Greaves *vs.* Niagara District Mutual Insurance Company, 25 U. C. 127, clearly no compliance with the condition, and a non-suit was therefore ordered to be entered.—*Carter* v. *Niagara District Mut. Ins. Co.*

Different Subjects of Insurance at Separate Amounts; Construction of Policy.—A policy insuring several different subject of insurance at separate amounts, and containing a provision that "the Company shall be liable to pay the insured two-thirds of all such loss or damage by fire as shall happen to the property, amounting to no more in the whole than the aggregate of the amounts insured, and to no more on any of the different properties than two-thirds of the actual cash value of each at the time of the loss, and not exceeding on each the sum it is insured for," is to be treated as a separate insurance upon each subject of insurance, and therefore the Company is liable only for two-thirds of the loss on each subject, notwithstanding that on some of the subjects the loss is less than the amount for which those subjects are insured and notwithstanding that the whole loss is less than the aggregate amount insured.—*King* v. *the Prince Edward County Mutual Ins. Co.*

Fitzgerald vs. Gore District Mutual Insurance Company.—At the Hamilton Assizes this action was brought on trial.—Plaintiffs, in 1865, insured property in Guelph in the above Company to the amount of $1,000. Plaintiff afterwards mortgaged the property to a party named Newton for the amount of $1,000, to whom he transfered the policy—notifying the Insurance Company of the same. The property was afterwards accidentally

destroyed by fire, and defendants claim that assessments made by them were unpaid and in arrears, and that after the transfer of the policy, defendants had nothing to do with plaintiff; plaintiff set up that a by-law had been adopted by the Company, extending the time of levying assessments, but that it had never been enforced, and he was unaware that they were levied monthly.

After the examination of two witnesses for the plaintiff and one for defendants, His Lordship ordered a nonsuit, with leave to enter a verdict for $1,000 if it was proved by law, he was entitled to recover.

Commercial.

Toronto Market.

The prevailing feeling in business circles is still one of dullness, though we think there are signs of an improvement. There is still a lack of confidence, which tends greatly to restrict business. Money is also closer under an increased demand. We are not disposed at all to take a gloomy view of the incoming season's business. The present stringency is largely due to the detention of produce by the farmers, which should have been exchanged for money, and which would ere this have passed into the hands of the country merchants and thence to the wholesale trade. But as this produce is still in the country it has yet to come out, and when it moves a healthy reaction will ensue. This must come at some time within the next three months at the farthest. We are inclined to think that though present appearances are not flattering, the spring trade will at least compare favorably with the winter trade, and probably exceed the anticipations now generally formed of it.

Groceries.—A good business has been done in sugars and teas at steady prices. Other articles quiet.

Hardware.—Tin keeps firm and our quotations are fully maintained. As a sign of progress we may mention that Messrs. Lyman & McNab, one of our best firms, have removed from their old premises on King street to a new and most eligible business site on Front street. The steady expansion of the business of this house required better facilities, and these are amply secured at the new establishment.

Grain.—*Wheat*—Receipts for the week, 1,460 bushels, and 7,140 last week. There is a better feeling in the market, though the amount of business done was very moderate. Spring fs firmer; there is a good enquiry for May delivery at 95c, and at 90c to 92c on the spot; holders are asking 95c to 97c for cargo lots; no sales reported. Fall is held at about $1.05 f.o.b., but is dull; there is some enquiry, and probably good samples could be placed at $1.00. *Barley*—Receipts, 500 bush., and 900 bush. last week. Barley is dull, and offering at $1.20 to $1.25, without buyers. *Peas*—Receipts, 500 bush., and —— bush. last week. There is a considerable amount offering, and cars are selling ot 70c to 75c, but there is not much demand. *Oats*—Receipts light. They are in good demand at 50c on the track. *Rye*—Selling on the street at 60c to 65c. *Seeds*—Clover is dull; holders ask $6.25 to $6.50, with buyers of small lots at $5.75 to $6. Timothy is in fair demand at $2 to $2.50; held at $2.25 to $2.75. Flax, $2 to $2.25.

Flour—Receipts 1,026 brls., and 1,300 brls. last week. The market is firmer, owing to advices of an improvement in England; No. 1 Superfine is held at $4.10 to $4.15, with buyers at $4 to $4.05; no sales reported. Fancy, nominal. Extra has been taken pretty freely for export at $4.40 to $4.50; the market closing nominal at these prices. Sales—1,000 brls. Extra, at $4.40 f.o.b. cars at at Malton; 500 brls. at $4.47 f.o.b. cars here, and 500 brls. at $4.50 f.o.b. cars here.

Provisions.—*Butter*—Is a little easier under good receipts, a small lot choice tub sold at 24½c. and another lot at 25c.; ordinary neglected. *Dressed Hogs*—Receipts light, a small business done at quotations. *Pork*—Mess in light stock, not much demand, it is worth $26 in lots. *Bacon*—Stocks have run low, retail lots selling at quotations. *Hams*—A lot of good smoked sold at 13½c. *Cheese*—Firm and in light supply. *Eggs*—Are still high but must soon drop

Freights.—Rates by Grand Trunk Railway:—Flour to all stations from Belleville to Lynn, inclusive, 35c., grain per 100 lbs. 18c.; flour to Brockville and Cornwall, inclusive, 43c. grain 22c. flour to Montreal 50c. grain 25c.; flour to all stations between Island Pond and Portland, inclusive, 85c. grain 43c.; flour to Boston 90c., gold, grain 45c.; flour to Halifax 98c., grain —c; flour to St. John 98c. Boxed Meats to Liverpool per gross ton 82s. 6d.; lard or butter in tinnets 87s. 6d.; Pork 11s. per tierce; flour 5s. 6d. per barrel; grain 12s. per 480 pounds. Rates by Great Western Railway—Flour, Toronto to Suspension Bridge 25c. gold; thence to New York, 92c. U. S. currency per bbl.; to Boston $1.02. Grain to Bridge 13c., gold; thence to New York 46c, U. S. currency; to Boston 51c. Grain, Toouto to Detroit, 18c. ber 100 lbs; flour 35c per bbl.

Demerara Sugar Market.

The following is from Sandbach, Parker & Co.'s Market Report, dated Georgetown, 23rd Feb., 1869:—

We have had an active fortnight for business. Imports have been in excess, and prices have, in most instances, favored buyers. The transactions have been on a large scale, and our markets have presented more animation than for some time past. The arrivals consist of five vessels from United Kingdom, ten from United States, thirteen from British Provinces, and fifteen from neighbouring Colonies.

Sugars.—An active demand, and but little offering, has forced up prices. Many vessels are detained for want of Sugars, and we confidently look forward to higher rates being paid. Vacuum Pans of the best grades are scarce, and when offered for sale the competition is very keen. Muscovadoes have also advanced, but the offerings for the fortnight have not exceeded 100 hhds., and for these outside quotations have not been given.

Molasses.—The inquiry is active, and both Vacuum Pan and Muscovado are sought after at the extreme limits of anything like good quality.

Rum—Has been weaker with us, and about 100 puns. have been reported sold from 46c to 48c.

Sugars (package included) sold by 100 lbs. Dutch, 10 per cent. tare.

Muscavadoes, equal to No. 8 Dutch Standard	$4.10	In hhds. of about 1800 lbs. each.
No. 10 do.	$4.25	
" 12 do.	$4.75	
Vacuum Pan No. 12 do.	$5.50	
" " 14 do.	5.75	
" " 16 do.	6.00	
" " 17 do.	6.20	
" " 18 do.	6.40	

Molasses (package included, sold by Imperial gallon.)

Muscovado, from 23 @ 26 cents, as to color and density	In puns of 100 gals.
Vacuum Pan from 27 @ 32 cents, as to color and density	
Rum (colored, package included, sold by Imperial gal. from 55 per cent, @ 38 overproof 40 @ 45 cents.	Ditto.
From 38 per cent. @ 40 overproof, 45 @ 50 cents.	

Halifax Market.

Breadstuffs.—March 23.—We have to report a concession of 5c. to 10c. per barrel on last week's quotations. The demand for Supers. continues, holders offering at $5.65, accepting $5.60. The demand for White Wheat, Extra and Fancy, has been very limited, buyers rejecting them even at a reduced rate. Oatmeal continues without any demand, and large stocks. Corn Meal h declined still further, lots having changed han at $4 for K. D. White Beans, at Auction t week, realized $2 per 60 lbs. for good new.

White Wheat Extra (Fall) $6.50 to $6. Fancy $6.10 to $6.25. Bakers' Strong $5.75 $5.90. Supers. $5.60 to $5.65. No. 2, $4. to $4.75. Middlings $4.25 to $4.50. Rye $4.7 Cornmeal K. D. $4.00 to $4.10. F. G. $3.80 $3.90. Oatmeal $7.00.

Provisions.—We notice no change in Pro transactions are very limited, dealers looking f ward to more liberal receipts from Outports opening of navigation. Beef is still dull and u changed. Butter more active at advanced rat Lard in request. Cheese inactive, stocks light.

West India Produce.—We note the sale several cargoes of Molasses at 42c. to 42½ for Ci finegos, being about ½c. advance on former sal There still exists a diversity of opinion as to p sent prices, and dealers are unwilling to oper largely, and hold off for lower figures. Sugars unchanged, receipts particularly of Cuba contin very light. Rum unchanged, without tran tions. Coffee inactive.

Exchange.—Bank Drafts London at 60 d at 13 per cent. Montreal sight 4 per cent. N York Gold 4 per cent. Currency 19 per cent. d St. John, N. B., 3 per cent. prem.—*R. C. Ham ton & Co's. Circular.*

The Sugar Duties.

The following order in Council is passed, dat the 25th inst., on recommendation of the Minist of Customs: From and after this date there sh be allowed for tare on sugar imported in ho heads, 12 per cent., and in tierces 14 per cent. the gross weight of each; and on barrels an allo ance of 26 pounds each; on bags in which sugar imported an average tare shall be allowed, to ascertained by weighing one bag out of every te If in any case objection is taken to the abo scale of allowances for tare, then the actual ta according to the original invoice may be allow subject, however, to such examination, either actual weighing or appraisement, as may thought necessary by the Collector of the Po to prove that the actual weight of the package not less than that stated in such invoice.

Pork Packing for 1868-9.

The Cincinnati *Price Current* publishes its co plete figures of the packing of the season ju closed, which compares with its figures for t past two seasons, as follows:—

States.	Hogs cut up. 1868-9.	1867-8.	1866-
Ohio	544,561	562,955	557,8
Illinois	806,633	1,068,495	1,072,5
Indiana	326,658	321,888	323,9
Iowa	126,335	182,944	177,0
Wisconsin	129,094	164,958	163,4
Missouri	361,067	333,111	328,6
Kentucky	183,426	157,880	157,8
Totals	2,477,264	2,792,032	2,781,4

Or 325,668 less than last season; and 304,166 l than the season before.

The average weight and average yield of la per hog, compare for two years, as follows:—

	Av. weight per hog. 1868-9.	1867-8.	Av. yield of la 1868-9.	1867
Ohio	224 1-2	204 1-2	24 5-8	24 1
Illinois	202 4.5	205 5-8	23 5-7	22 1
Indiana	205 1-4	202 3-8	23 5-8	22 5
Kentucky	207 1-2	207 1-6	24 1-2	22
Missouri	206 1-2	198 7-9	28 3-8	21 1
Iowa	201 1-2	190 1-4	22	21 1
Wisconsin	211	189 3-4	24	19

The general average according to the *Price Cu rent* is 206¾ lbs. and 24¼ lbs. lard, against 201 a 21⅔ lbs. last season, and 235 1-7 and 29¼ lbs. t previous season.

Taking the average given above as a basis, t virtual decrease from last season in the numb of hogs packed is given as 244,901 hogs on t

erages of the season of 1867-8, and the actual erease in the yield of lard—other than head and it—674,781 lbs.

The total number of hogs packed in the West, r each of the last twenty years, is given by the *rice Current* as follows:—

Year.	No. Hogs.	Year.	No. Hogs.
49-50	1,652,220	1859-60	2,355,832
50-51	1,432,867	1860-61	1,156,302
51-52	1,182,846	1861-62	2,803,636
52-53	2,201,110	1862-63	3,069,526
53-54	2,534,779	1863-64	3,261,100
54-55	2,124,404	1864-65	2,422,775
55-56	2,489,592	1865-66	1,705,955
56-57	1,818,498	1866-67	2,781,460
57-58	2,219,787	1867-68	2,792,032
58-59	2,465,552	1868-69	2,477,264

The Salt Mines of Cracow.

Poland, as every one knows, was formerly an independent sovereignty, existing from an early date. t present its ancient territory is divided between ussia, Prussia and Austria. The city of Cracow, ice the residence of its kings, now belongs to the tter power, though the products of the celebrated lt mines of the region are shared with the two hers, in certain proportions stipulated by the eaty of partition. These salt mines, the most nowned in the world, are situated about eight iles from the city of Cracow, having their mouth principal entrance in the pleasant village of ieliczka, which lies on the slope of a wooded ll, and is very picturesque. The superintendits of the mines reside here, and their dwellings, gether with the government offices and large orehouses for salt, occupy a pretty eminence, d are conspicuous from a distance. A great any people from various countries visit these rarkable excavations, and are well rewarded for eir trouble. Every year for many centuries havg added to their depth and extent, these mines e now of immense and almost incouceivable magtude. In order to visit them the traveller must ocure a permit from the government, which is sily done, the proper officer being on the spot. ie opening or square shaft, through which the scent is made is covered by a building or office; d here the visitor is dressed in a long, coarse, nen blouse, to protect his clothing while under ound. A door is opened, and he goes down by airs, preceded by boys who carry lamps, only to ake the darkness more visible. Or, if he is so sposed, he can descend by the windlass and ropes spended in the centre of the shaft. More freiently visitors descend by the stairways and come by the ropes. No salt is seen for a depth of ore than two hundred feet; then the veins beu to appear in a bed of clay and limestone.—ifty feet further down the stairs terminate, and ie salt is everywhere; nothing but salt; overead, under foot, on every side are dark grey masses solid salt, whose points and surfaces sparkle in ie lamp light. Gallaries now branch off in all rections. Lights twinkle, and groups of laborers e seen hacking the floors or removing in wheelarrows blocks that have already been cut out.—assing on through one of these gallaries, a chapel reached, which is only the first and oldest of any apartments thus designated, differing only size and decorations. It is called the Chapel of . Anthony, and is supported by columns of salt ft in quarrying the solid rock. It has an altar, ucifix, statutes of saints large as life, and all of ire salt. The air in this part of the mines, near ie surface, is much more moist than that of the eper excavations, so that the process of dissolvg goes on slowly, and in consequence some of ese statutes of salt are gradually losing their ape. The head of one is nearly gone, the limbs another, while deep furrows are observeable in any places upon their bodies, making them preut a very grotesque appearance when lighted up r exhibition. The smoke of the torches and mps, added to the dampness of the air, blackens ie surface of all objects not recently cut, so that ese statutes might be mistaken for black marble. Onward and downward goes the visitor, through halls, chambers, tunnels innumerable.—Stairs descend lower and lower, and similar apartments reappear, till he loses all sense of distance or direction; blindly following his conductors, who point out, from time to time, localities or objects of peculiar interest, where all is surpassingly wonderful. Everything is solid salt, except where some insecure roof is supported by huge timbers; or a wooden bridge is thrown over some vast chasm from which thousands of tons of salt have been quarried and removed. The air grows drier and purer the deeper you go; the points and faces of the rock more crystalline and brilliant. One enormous hall, out of which has been cut a million hundred weight of salt, has the appearance of a theatre. It is over one hundred feet high, and the blocks, taken out in regular layers, represent the seats for the spectators. In another spacious vault stand two obelisks of salt, which commemorate the visit of the Emperor Francis I. and his Empress. Further on you come to a lake more than twenty feet deep, intensely salt, of course, which is crossed in a heavy square boat. In this you are paddled through a tunnel which connects two immense halls. While in the middle of the tunnel the walls behind you and before you are brilliantly lighted up, and a gun is discharged which, with its echoes and reverberations, almost deafens you. Both air and water tremble visibly under the strange and frightful concussion, and you are only too thankful to reach the end of your voyage and stand once more on solid salt. Francis Joseph's ballroom is another of the wonders of this subterraneous world. It is an immense apartment, both in height and extent, and on some festive occasions is used for dancing. It is lighted by six chandeliers, which resemble cut glass, but are in reality of crystaline rock salt. Statues of Vulcan and Neptune, sculptured from salt, also adorn this hall, which, when well illuminated, exhibit a marvellous splendour, the light being reflected from innumerable brilliant points and angles of the glittering rock.—Down, down, down, hundreds of feet further, through labarinths of shafts, galleries, and chambers, crooked passages, vaulted archways, and openings which have no name and seemingly no end. Groups of miners, naked to the hips, are everywhere busy with the implements of their labours; pick, mallet, and wedge are employed incessantly in blocking out and separating the solid mass. Their manner of work is the same simple process in use centuries ago, perhaps by the remotest ancestors of these very same men, in these very mines, for they are immensely old. The blocks are marked out on the surface of the rock by grooves. One side is then deepened to the required thickness, and wedges being inserted under the block, it is soon slit off. It is then divided into pieces of a hundred pounds each, and in this shape is ready for sale. It is removed in carts or barrows to the shaft, where it is hoisted up, stage after stage, to the surface. Horses and mules are employed, and it is said that some of these animals are born and raised in the mines. The number of laborers constantly at work is from one to two thousand. They all live outside the excavations at the present day, although traditions exist of times when the families of some of the miners had their abodes in these fearful depths, and where children were born and reared to the occupation of their parents, seldom or never visiting the outside world. The thing is neither impossible nor incredible, as the air in the lowest part of the mine is considered more salubrious than in their upper regions. But the practice was long ago discontinued, if it ever existed to any extent. The miners, who are fine, muscular, and healthy looking men, are divided into gangs for work, and relieve each other every six hours. A gang will quarry in that time about one thousand hundred-weight. The temperature is very even all the year round, and the preservative power of the air is such that wood never decays, but retains its qualities for centuries. People with pulmonary affections are said to have been much benefited by inhaling freely the atmosphere of the mines. When and how this wonderful deposit of salt was originally discovered is unknown. It was worked in the twelfth century, and how much earlier none can tell. Some traditions are held by the ignorant and superstitious peasants of the country, which ascribe the discovery to miraculous or supernatural agency. Others say that a certain Queen of Poland, on visiting the spot, commanded her subjects to dig there, assuring them that there was a most precious treasure beneath them. After a while a crystal of salt was found, which, as an earnest of the abundance afterwards discovered, this princess had set in a ring, as a royal gem, and wore to the day of her death. The extent of the deposit has not yet been fully ascertained. It commences, as we have before stated, about two hundred feet below the surface, and has a solid depth of nearly seven hundred feet, and rests on a bed of compact limestone, such as forms the peaks of the Carpathian mountains, which it seems to follow. It has already been explored to the continuous length of two miles and a half; and it is estimated that the aggregate length of all the innumerable excavations of these mines amount to more than four hundred miles!

Cost of Transportation.

The actual cost of ocean transportation averages two mills per ton per mile. That of the lakes and Hudson River averages (and that of the lakes and St. Lawrence would average, if canals for ocean vessels were built) 2¼ mills per ton per mile.—The Erie Canal, owing to its great length and the number of locks, averages five mills per ton per mile. Ordinary railway transportation has heretofore averaged from 12½ to 15 mills per ton per mile. But by the introduction of the Bessemer steel rail, which is expected to wear from twenty to forty years, the cost of railway freights is reduced to 7½ mills per ton per mile. The new Odshauser process of making iron by which the cost of manufacture will be diminished a third or half and its quality improved, will still further reduce the cost of railway transportation.

The Wine Trade.

The following relates to the Bordeaux vintage of 1868:—Our merchants here do not seem to repent having paid such high prices for the wines of the vintage of 1868. The remnants of lots partly disposed of have been taken up lately at full rates. The last sale was of the balance of Duluc, a fourth-class wine, at 3,000 francs per ton (£30 per hogshead), to which add some 35 per cent. to cover charges, &c., before it can be fit for shipment. Some opinion of the quality of the 1868's is possible now, on tasting the deliveries made by the proprietors recently, and so far the impression is very favorable.

Exports of Petroleum from the United States from Jan. 1 to March 13.

Petroleum Shipments.

We are permitted to make the following extract from a private letter from Mr. B. Shaw, dated Liverpool, February 24th, written to Charles Manning, of this city: I am glad to say that I found the staunch little bark (the Wirralite) at Gibraltar, as tight as a bottle. I started her off, and she arrived here in eleven days, and on now discharging cargo we found only four barrels of naptha empty (total leakage) out of 1,572 barrels of oil and naptha. This speaks favourably for direct shipment, when made in well-fastened strong vessels.—*Cleveland Herald.*

Silk Culture.

The production of silk is becoming an important industry in California. The climate seems peculiarly favorable; from three to five crops of cocoons are raised in one season. It is said that the worms are less liable to disease and produce a remarkably fine and tough fibre which, unlike that of Europe, will not fray after it is made into cloth. Those in the trade last season represent that a profit as high as $2,800 per acre of mulberry trees was realized—a most flattering result. The silk industry is rapidly extending. Los Angelos county is expected to raise twenty millions of cocoons in 1869.

Exports of Prince Edward Island.

ASSETS, $21,000,000.—Acquired by prudent and economical management of twenty-two years, without the use of a single dollar of original capital.

SURPLUS ASSETS, $6,361,967—All profits divided among the members. Each policy holder is a member. There are no stockholders.

ITS DIVIDENDS—Have averaged over 50 per cent. annually. Total amount of dividends paid the members since organization, $4,397,142.

ITS SUCCESS UNPARALLELED—It has arrived at the extraordinary condition where the income from annual interest alone is more than sufficient to pay all the losses. Total amount of losses paid by the Company, $6,868,528.

ITS RESPONSIBILITY—For every $100 of liabilities it has $154 of assets.

LAST YEAR'S PROSPEROUS BUSINESS.

Amount insured fiscal year, 1867 .....$45,647,191 00 | Income received fiscal year, 1867.....$7,530,88

During its last fiscal year this Company paid to its living members, and to the families of deceased members nearly $2,000,000, and at the same time added more than four millions to its accumulated capital.

The whole record of this Company has been one of prudent management and prosperous advancement. Among older and leading Life Insurance Companies its average ratio of expenses to income has, through its entire history, been the lowest of any.

ITS LIBERALITY—It accommodates the insured by giving credit for part premium, and grants insurance to meet all the contingencies and wants to which Life Insurance is applicable.

It issues policies on a single life from $100 to $25,000.

MEDICAL REFEREES—J. WIDMER ROLPH, M.D.; H. H. WRIGHT, M.D.

LIFE ASSOCIATION OF SCOTLAND.

Invested Funds Upwards of £1,000,000 Sterling.

THIS Institution differs from other Life Offices, in that the BONUSES FROM PROFITS are applied on a special system for the Policy-holder's personal benefit and enjoyment during his own lifetime, with the option of large bonus additions to the sum assured. The Policy-holder thus obtains a large reduction of present outlay, or a provision for old age of a most important amount in one cash payment, or a life annuity, without any expense or outlay whatever beyond the ordinary Assurance Premium for the Sum Assured, which remains intact for Policy-holders' heirs, or other purposes.

Secretary-Treasurer—A. McK. COCHRANE, 388 St. Paul Street, Montreal.

THIS COMPANY, with machinery now in working order and in course of construction, will be able to manufacture this year FROM TEN TO TWELVE THOUSAND TONS OF GOOD FUEL. Actual working shows—

I. That the fuel can be produced for $1.45 a ton, and with the improved machinery, at a much less cost.
II. That, for steam purposes, one ton of it is superior to one cord of wood, in the proportion of 31 to 27.
III. That, for domestic purposes, it is equal to wood or coal, and leaves very little ashes—about five per cent.

At the annual meeting of the Company in Montreal, it was decided to offer one thousand shares of Stock in Toronto. Mr. Isaac C. Gilmor has been appointed agent of the Company in Toronto, and is authorized to receive subscriptions for the Stock.

Prospectus, Map of the Property, and further information may be obtained by addressing

Meetings.

THE LANCASHIRE INSURANCE COMPANY.

The annual general meeting of the proprietors of this company was held at their offices, Exchange-street, London; Mr. John Todd, the chairman of the Board of directors, presiding.

Mr. George Stewart, the general manager of the company, read the following report of the directors:—

"The directors have much pleasure in meeting the proprietors, and in reporting the result of the business of the Company, during the year 1868.

"Accounts and Balance Sheet.—Accompanying the present report will be found, as in former years, detailed accounts of the fire and life business and the general balance sheet of the company.

"Fire Business.—The fire premiums received during the year 1868 amounted to £112,579. The sums paid during the year for re-insuring the surplus risks of the company amounted to £21,307, and for claims for loss and damage by fire to £45,350. After payment of all claims, expenses of management and reinsurances, and making due provision for claims unadjusted at 31st December, 1868, there was a clear profit of £21,813 8s. 1d. on the fire business of the year, which sum has been carried to the credit of the proprietors' fund.

"Life Business.—The income of this department during the year amounted to £46,636. The claims from 41 deaths amounted to £15,978, and after providing for these, and the various other sums detailed in the balance sheet, the sum of £18,359 18s. 6d., has been added to the life reserve fund, which has thereby been increased from £150,970 19s. 8d. to £169,330 18s. 2d.

"Funds and Investments.—The satisfactory nature of the investments may be seen by a reference to the balance sheet of the company. The amount of interest realized on these investments during the year was £16,635 1s. 6d.

"Proprietors' and Reserve Funds.—The income of the proprietors' and reserve funds for the year amounted to £30,289 4s. 5d., out of which the directors have already declared a dividend of ten per cent. per annum, which absorbed the sum of £14,614, leaving a surplus of £15,675 4s. 5d. of which £10,023 2s. 8d. has been appropriated to the Birmingham purchase, and £5,652 1s. 9. has been added to the reserve fund. The paid up capital amounts as formerly to £146,140. The ordinary reserve fund has been increased from £40,698 11s. 4d. to £46,350 13s. 1d., and the amount reserved towards the Birmingham office purchase has been increased from $8,000 to £16,000.

"The directors retiring are Messrs. Clegg, Hargreaves, Kay, Pilkington, Smith; and Wood (deceased), of whom Messrs. Clegg, Hargreaves, Kay and Smith, being eligible, are recommended for re-election, and John Pender, Esq., merchant, Manchester, is recommended for election."

The Chairman said: The report just read, and which has been in your hands some days, is so plain and explicit that it leaves me very little to add by way of explanation, and I am sure only a very few words are needed to secure its adoption. The year 1868, all things considered, has been the most successful year in the history of this company. Our income is larger, our total profits larger, and our reserve funds are larger, than we have ever previously reported. In proof of this, let me call your attention very briefly to the figures contained in the printed balance sheet. And first as to the income. You will find it therein stated that the income during 1868 was as follows:—

Fire premiums	£112,579
Life do	39,527
Interest on investments	16,635
Making a total of	£168,741

Now, our income from these three sources during the previous year amounted to £157,172, so that the year's increase exceeds 1867 by £11,500; secondly, as to the profits, the year 1867 was considered by us to be a successful one; but that year's profits have been exceeded by the year 1868:—

The fire profits for 1868 amount to	£21,813
The life surplus fund	18,359
Together	£40,172

Whereas the fire profits and life surplus for the previous year, 1867, amounted to £37,756. Lastly, the reserve funds, at the close of these two years are:—

	1867.	1868.
Life department	£150,970	£169,330
Fire department	48,698	62,350
	£199,668	£231,689

Thus showing an increase in one year of no less than £32,012, a fact I leave to speak for itself. There is only one other remark I wish to make, and it is this, that there has been a profit in every one of our branch offices during the past year. I think this is a satisfactory feature, and proves that the careful management of the company is extended over the whole range of its operations; and now, gentlemen, I move that the report now read be approved and adopted.

Mr. Darbyshire said it was with great pleasure that he rose to second the adoption of the report, which he was sure would meet with the approval of all the proprietors. He especially would refer to the addition made to the reserve fund, believing it was much better and safer to act upon the principle of adding to the reserve than to increase the dividend. He remembered in the first years of the existence of the company there was a strong desire to add to dividend; but the course of the directors had always been to keep the capital intact from the commencement, and the consequence had been that the capital had gone on gradually increasing, and the position of the company was improving in the confidence of the public. In Liverpool they stood as high as any office there. There were other offices that took up the ground before themselves, and naturally people were disinclined to change. There was no question, as to insurances generally, there was not much profit on premiums, sufficient care being taken to keep them as low as was possible; but the foreign business, so far as he had had the opportunity of judging, he found was excellently and profitably managed. Everything that was done was submitted to the Manchester directors, and he was proud of the gentlemen who constituted that board; they were all business men, who like him-

self had fought their way in the world. He was, therefore, truly happy in being able to state that in all the departments of the company, as the worthy chairman had stated, everything had been conducted in the most satisfactory manner. (Hear, hear.) As he should not probably have the opportunity of speaking again, he would remark of the officials that he was convinced that there was not another office in Manchester, London or Liverpool so well arranged; and he congratulated the meeting on this fact, as well as on the ability and efficiency of their manager, as an augury of success for the future. (Hear, hear.)

Mr. Thomas Stolterfoht, of Liverpool, supported the resolution, and said that next to getting hold of business the consideration of the company should be directed as to how they should take care of their money—to guard against losses either by fire or life or unfortunate investments. He thought this was an occasion on which they might congratulate most warmly those gentlemen who had devoted their attention to the investments of the company, and to their excellent manager for the manner in which he conducted the business of the concern. They all knew how many private persons had lost a large amount, even with the knowledge they possessed, and many companies had been crippled through some unfortunate omission. This was not the case with this company, and he attributed much of it to the care exercised in every department. (Hear, hear.)

The resolution was then passed.

The Chairman then moved, "That Messrs. Clegg, Hargreaves, Kay and Smith be re-elected directors, and that Mr. John Pender be elected a director of the company."

Mr. Thomas Broadbent seconded the resolution, which was passed.

The next resolution was the re-appointment of Mr. Adam Murray and Mr. James Halliday as auditors of the company.

The resolution was moved by the Chairman, and seconded by Mr. Shelmerdine, and passed.

Mr. Nicholas Heald moved:—"That the thanks of the shareholders are due and are hereby tendered to the directors of the Company, and to the members of the local boards of directors in Liverpool and Glasgow, for their valuable services." Mr. Heald said: I think myself highly honored by having this resolution entrusted to my hands. Some of the older shareholders, and many of the directors present, who sat at the board with me, will remember I was at issue with them respecting the fair apportionment of the general charges to the life department. I am not going to renew that controversy here; for the balance sheets lately presented give no cause for cavil, the proportion of general expenses to life being about one-fifth, and of fire four-fifths, and to that no one can or ought to object. (Applause.) Before taking leave of the life business, I cannot help remarking on the rapid accumulation of its reserve. In 1863, it was £94,700; in the next two years, 1864 and 1865, it rose to £155,300, being an average addition of £10,500 per annum; the two following years, 1866 and 1867, we find it at £151,000, or an average added of £17,500 per annum; and this last year, 1868, it is £169,300, being an addition of £18,350, the largest yet made. Fire premiums at the same time have run up from £57,000 to £113,500, and that branch has now a reserve fund of nearly £49,000, a sum nearly equal to the annual premium of five years ago. These facts speak volumes for the directors, and I can have no hesitation in saying that they have earned and deserve our heartfelt thanks. (Applause.) One word before I sit down. I congratulate the board and the shareholders at the total avoidance of annuity business by this company. I think it stands almost alone in what I believe is an unprofitable and onerous branch of business. (Applause.)

Mr. T. Fielden seconded the resolution, which was passed unanimously.

The Chairman briefly responded, and on vacating the chair a cordial vote of thanks was passed to him personally, and the proceedings terminated.

BRITON MEDICAL AND GENERAL LIFE ASSOCIATION.

The fifteenth annual meeting of this company was held in London (Eng.,) on the 18th March, 1869. The following is the

FIFTEENTH ANNUAL REPORT.

The Directors of the Briton Medical and General Life Association have much pleasure in reporting to the shareholders and policyholders the transactions of the Association for the year ending December 31st, 1868.

New Business.—The Directors have received 3,242 proposals for assuring the sum of £972,166 18s. 9d. Of these 171 for £76,430 have been declined; 599 for £194,985 14s. 9d. were not completed from various other causes. The remaining number have been carried into effect, and 2,472 policies issued assuring $703,451 4s., and producing in annual premiums the sum of £25,277 8s. Four annuities have been granted, for which £1,150 has been paid to the Association.

The Association having now completed its fifteenth year, it will be interesting to trace its progress since its formation by the following tabulated returns, which exhibit the new business transacted during three quinquennial periods:—

Quinquennial period ending	No. of Proposals.	Amount Proposed.	No. of Policies Issued.	Amount Assured.
1858	4,802	1,023,140 0 0	3,318	654,140 0 0
1863	13,244	2,779,666 0 0	9,746	2,037,383 0 0
1868	17,466	4,861,303 5 9	13,699	3,752,967 4 8
Total...	35,512	£8,664,109 5 9	26,763	£6,444,490 4 8

Annual Premiums, 1858		£21,347 16 5
" " 1863		63,507 19 10
" " 1868		122,257 17 6
Total		£207,113 13 9

General Income.—The net premium income has increased to the sum of.....£216,704 1 7
The interest on investments and other items of receipt yield..... 21,276 18 1

Making a total income of.....£237,980 19 8

Claims.—The claims have been 335 in number of lives and 379 in policies, amounting, less reassurance, to the sum of £127,886 12s. 1d. This sum includes all claims which were admitted, but not due, at the close of the year.

Balance of income.—After deducting all claims, surrenders, expenses, charges of management, and other out-goings, the balance of the year's income is £68,026 9s. 4d., which sum has been duly carried to the capital account. The assets of the Association at the close of the year amounted to £667,493 8s. 5d.

Accounts and Audit.—The accounts of the Association, from which the foregoing figures are taken, have been carefully audited by the four appointed auditors who have reported to the board as follows:

To the Directors of the Briton Medical and General Life Association—Gentlemen: We have carefully examined the various books, accounts and vouchers of the Association, and find them correct and satisfactory. We have also inspected the whole of the securities, which we also find to be in perfect order. The excellent system of quarterly audits has been maintained, by which we have been enabled to exercise perfect supervision over the extensive transactions of the Association. It is again our pleasing duty to bear testimony to the very efficient manner in which the books are kept, and noting with satisfaction the continued increase in the affairs of the Association. Henry Alcock, John Brown, William Brooks, C. R. Rowland, auditors.

Dividend.—The Directors recommend that a dividend of £8 per cent. per annum on the paid up capital of the Association, free of income tax, be declared.

Bonus.—During the year the consulting actuary, Mr. Arthur Scratchley, completed his investigation into the affairs of the Association, and the Directors in accordance with his recommendation distributed the sum of £87,247 17s. 6d. among the shareholders and policyholders, in accordance with the terms of the deed of constitution. In connection with this subject the Directors would here draw especial attention to the fact that the next bonus valuation will take place at the end of the year 1872, and that all policies effected on the profit scales *prior to the 31st December*, 18 will be entitled to participate in the same.

Branches and Agencies.—The Directors are happy to be able to report continued efficient and hearty co-operation in the working of the various branches and agencies. The arrangements by which the affairs of the Association in Scotland were placed under the supervision of an influential and energetic local board continues to work satisfactorily.

Directors and Auditors.—Four of the Directors, viz., Mr. Chapman, Mr. Coventry and Mr. Oliv retire from the Direction, but, being eligible, offer themselves for the honor of re-election. The auditors also retire and offer themselves for re-election.

Conclusion.—The Directors, in conclusion, would draw attention to the successful establishment during the past year, of the Brittannia Fire Association, under the auspices of the Briton. The Directors believe that the establishment of a Fire Company, to work in active co-operation with the Life, will tend much to the advantage and profit of both institutions. From using the same Offices, in London and elsewhere, and employing certain members of the staff and other business elements in common, the expenses of each institution must be materially lessened, and a corresponding benefit accrue. The large field of operations necessarily occupied by a successful Fire Office, will also augment the facilities of extending the business of the Briton. On all these grounds the Directors believe they are justified in augurating a new source of prosperity to the Life Office from the establishment of the Britannia Association. It is scarcely necessary to remark that the capital funds and constitution of each office are quite separate and distinct.

The Directors have again the pleasure to acknowledge the large measure of support they have received from the members of the Medical Profession, and they beg respectfully to repeat the appeal to the shareholders and policy-holders of the Briton Association not only for a continuance of their confidence, but also that they should extend that confidence to the two companies.

By order of the Board, FRANCIS WEBB, Chairman. W. TYLER SMITH, Deputy Chairman; JOHN MACSENT, Actuary and Secretary.

London, 18th March, 1869.

The Chairman said he had great pleasure in rising to move the adoption of the report. The first thing that would probably strike them was the fact that the new business was a trifle less than it was in the preceding year. The falling off, however, was very small, the new premium of the year amounting to £25,277, which was £189 less than the sum reported last year. The number of policies issued had been less than that of the preceding year. Though this might seem a trifle discouraging, yet there was the counterbalancing fact that the policies were of a higher class, the average amount being £284, against an average of £257 in 1867. The general income for the year was £237,980, and after allowing for all claims and expenses of every kind they carried £68,000, which was a fraction over 29 per cent of their receipts. The claims had been upon 3 policies; and though they amounted to £14,0

ore than in the preceding year, they had not ex-eded the expected amount, and if they carried ck the comparison, they would find that the aims in 1867 were £27,000 less than they were in 366. The claims last year happened to have fallen on the larger policies, the average being £350, hereas the average of the new policies was £284. he mortgages upon freehold and leasehold pro-rty now now amounted to £225,000 ; and when ey added to that the amount invested upon nds and other loans incident to an insurance mpany, amounting to £177,538, £104,058 fund-securities, and a few other investments, the tal amount was brought up to £667,493. (Hear, ar.) Upon this large sum they have received the year an income of £21,000 as interest. The xt point referred to was the dividend. If the areholders did not get more than 8 per cent, it as simply because the Directors thought it wise accumulate their profitts rather than divide too rge an amount. The result of the bonus inves-gation had been made known. It must be a eat satisfaction to them to find that he could commend so large a sum as £87,000 for distri-ution, of which about £70,000 went to the licyholders ; and it was an additional satisfac-on to know that the result showed the office to in a sound and healthy position. (Cheers.) e would not detain them longer, but he thought should be wrong in sitting down without al-ding to the institution of the Britannia Fire As-ciation. This was a subject that had been fore them for many years, and at last the board ere unanimous in acceding to the wishes of any friends, shareholders and policyholders, to tablish that company. The result, so far as ey had gone, proved that they were fully justi-d in the belief that the institution of the Bri-nnia would be most useful in promoting the terests of the Briton Life. (Hear, hear.) They uld not remove their life policies from one office another without a sacrifice, but that was not e case with regard to fire policies. These were nerally renewed every year, and as they ex-red he had no doubt that many who were in-red in the Briton would transfer their fire poli-es to the Britannia, as many persons preferred have their life and fire policies in one office. business men he need not tell them that both ices would be assisted in regard to expenditure ; though it was quite true that nothing could more distinct than the two companies were as garded capital funds and liabilities, still there re certain items of expenditure in common, in ich the Briton would for a time help the itannia, and where the Britannia would come and relieve the expenses of the Briton to a eat extent. (Hear, hear.)

Dr. W. Tyler Smith (Deputy-Chairman) second-the motion. He would refer to the remark-le manner in which the first 15,000 shares in e Britannia Fire Association were subscribed r. In the course of a few days this number was plied for and allotted. (Hear, hear.) Of urse the reason why they had no difficulty in sposing of the shares was the positiou the ares of the Briton held in the monetary world. ie original shares were at the present time pay-g 16 per cent, and there could be no doubt that another five years this would be largely in-eased.

Mr. Oliver had great pleasure in moving that e best thanks of the meeting be given to Mr. thur Scratchley for the efficient services he had ndered to the association during the past year. ey had heard much about the prosperity of the iton, and for that success they owed a great al to those gentlemen who had been called in give their opinions upon different matters, and ongst the rest—perhaps pre-eminently so—ey had had the advice and assistance of the ntleman whose name he had just introduced to em. Their bonus reports for the year would tify to the merits and ability of Mr. Scratchley. ear, hear.) No small amount of actuarial owledge and skill was necessary to present such a report as that ; and he need hardly say that Mr. Scratchley occupied the very highest position as an actuary, and it was their happiness to have had the benefit of his advice for so many years. (Cheers.) He hoped they would continue to have his services, and that under his guidance the association would continue to progress. (Cheers.)

Dr. Carmichael, of Edinburgh, in seconding the motion, remarked that Mr. Scratchley's name was thoroughly well known in the actuarial world, and he believed that the bonus report which he had presented would add to his reputation.

The resolution having been agreed to, Mr. Scratchley, in returning thanks, said that this time last year he felt it his duty to speak diffidently of the prospects of the result of his valuation, and to utter words of caution ; but he could now tell them unhesitatingly that the bonus allotted had been fully and fairly earned. (Hear, hear.) The investigation involved 38,000 calculations, but he was greatly assisted in his labors by the returns which Mr. Messent furnished him with, and in which there was not a single error. (Hear, hear.) He had left a large and ample reserve for future liabilities ; and if the same careful management was continued for another five years, he hoped to have to make the same pleasant tale at the close of the next valuation.

The thanks of the meeting were tendered to Mr. Messent, the Actuary and Secretary of the company, who made a suitable reply.

A cordial vote of thanks was then given to the Chairman, and the proceedings terminated.

Insurance.

Fire Record.—Omemee, March 31.—The new steam saw mill of Wm. Cottingham, and the old mill formerly used as a saw mill but lately converted into a shingle mill. The entire premises were entirely destroyed. The value of the property is estimated at about $5,000. A local paper says there was no insurance on the buildings.

Chesterville, Ont., March 31.—Hilliers grist, saw and shingle mills, and Messrs, Ault and Edgerton's carding mill were totally destroyed. The mills were the property of J. P. Crysler, and were insured in the Western for $2,500 ; the loss will exceed that amount by seven or eight thousand dollars.

Niagara Township, Ont., March.—Dwelling house of Robert Thompson and contents; nothing saved, no particulars as to insurance.

Eden Mills, Ont., March 26.—The wagon shop of Ralph Richardson, was partially destroyed ; a cow and a horse perished in the flames. The fire was caused by a barrel of ashes which took fire.

Esquesing Township, Halton Co., Ont., March 27.—The barns, stables and sheds of Francis Kent, containing a quantity of wheat and other grain, hay, etc., were totally destroyed. No insurance. The origin of the fire is supposed to be incendiarism.

Balmoral, Ont., March 31.—The store occupied by F. Butler, was consumed with contents. The fire spread to the store of G. B. Lundy, the shoe-shop and house of Mr. Dougherty and the house of J. Reid. The three first mentioned parties will it is said lose heavily.

On River Severn, April 7.—Christie's saw mills were destroyed by fire. Insured in the Ætna of Hartford for $3,000 ; North British and Mercantile, $3,000. Property valued at $25,000.

Toronto, April 3.---A fire broke out in Brown's bookbindery on King street, but was extinguished. The loss on stock was from $3,000 to $4,000; ths insurances were as follows: Royal, $3,000; British-America, $4,000; Imperial, $4,000; Lancashire, $2,000; Liverpool and London, $2,000; Queen Insurance, $2,000; Commercial Union, $2,000; Western, $2,300; total, $21,300. The Etna had had a risk on the building of about $2,000. Loss $500 to $600.

Toronto, Feb. 26.--We have some particulars as to the fire in Shack's tobacco factory. The building was owned by Captain Strachan.—Loss on building $384. Insured in Ætna. The Queen had a policy of $4,000 on machinery ; damage about $400. No stock on the premises.

Resignation.---Mr. John Turubull, Fire Inspector of the Provincial Insurance Company has resigned. Mr. Turnbull was a most efficient and reliable inspector, and his resignation will be a serious blow to the company.

Appointment.—We understand that Mr. James Grant, late Secretary to the Life Association of Scotland, Montreal, and previously resident secretary at the Dublin office of the Edinburgh Life, has received from the directors of the Reliance Mutual the appointment of resident secretary at the Canadian branch of the Reliauce in Montreal. —*Post Magazine.*

International Life of London.—A bill has been filed in the United States Supreme Court, praying that it will employ its authority to enforce the winding up of the American business of the International Insurance Company of London, and empower the Superintendent of the Insurance Department of New York to appropriate the funds belonging to this company, in his possession, to the benefit of its policy-holders in this country. The deposit made with Mr. Barnes and its accumulations are sufficient to reinsure in sound and reliable American life institutions all this company's risks in the United States, and all who hold its policies should therefore present their claims to our Superintendent. We are convinced that every policy holder is equally entitled to reinsuraace from this fund, no matter in what State of the Union he may reside.—*Insurance Times.*

The New Feature—"Absolute security, not forfeitable, unconditional, and unchallengeable," are the striking terms which herald the introduction of the latest new feature in life insurance practice. The company which thus, at a single bound, overleaps the barriers which prudence has always interposed in the way of fraudulent claims, breaks ground vigorously for the life insurance policy of the future. We would not have been so greatly surprised if the inuovation had first obtained in some of the twenty or thirty American companies which, groping ahout for some new and unhcard of device for forcing business, had accidentally hit upon this most dangerous of all the heresies. But its introduction in England, where even annual distributions of surplus are almost unknown, warus us that not in this country alone are the old maxims and the old theories in danger.—*Chicago Spectator.*

Conservatism in Insurance.—Conservatism is observed in the management of a few of our American life insurance companies. It is a kind of conservatism, too, which is strangely distant from the headlong, impetuons, and irresistible manner in which the most of our companies are hurried forward to the brilliant fruition of a wonderful and vigorous growth. But for genuine illustrations of proverbially and persistently conservative management we shall have to go across the water. In England, for iustance, an agent would be considered insane who should ask a a commissiou of more than ten per cent. Then, again, it seems to be, very generally, a matter of supreme indifference whether the amount of uew business is small or large. But there is one reason why the managers of English life insurance companies are entitled to the highest commendations, and that is their obstinate and characteristic opposition to extravagant expenditures for getting business. Said the chairman of the annual meeting of a prominent London company, a few weeks ago : "Where a large commission is given to agents, it must materially interfere with the profits of any society. A small new business of five thousand pounds a year, that enables large bonus additions to be made to the policies is preferable to a very large new business that yields much smaller bonuses. The medical examinations are so strict, and the board are so careful not to waste their money in wild compe-

tition, costly advertisements, and so forth, that their business, though small, is very sound and choice." How earnestly we wish that such sentiments prevailed in the United States.—*Chicago Spectator.*

A fire inquest was held the village of Douglas, Ont., in reference to the burning of the store of Alexander Todd, who is going through the Insolvent Court. The inquest was held at the instance of the Gore District Mutual Insurance Company but nothing of consequence was elicited.

TORONTO FIRE DEPARTMENT.

The annual report of Mr. Ashfield, the Chief Engineer of the Fire Brigade, for 1868, states that "the Fire Department was called out to fires 79 times; there were 56 fires and 26 false alarms. The total loss on buildings destroyed or damaged was $25,382, and the insurance on these $86,100. The total loss on merchandize, furniture, etc., was $20,596, and the insurance $122,800. The amount of losses not covered by insurance included in the foregoing was, on buildings, $3,713; on merchandize, etc., $2,810. The Engineer observes that the amounts paid by the insurance companies on the above losses were in several instances far more than the real amount of loss. There were 28 brick buildings damaged; none destroyed; 47 frame buildings were damaged, and 62 destroyed. The causes of fires were: Cause not known or satisfactorily accounted for, 16; incendiary, 9; from lighted gas, 6; careless about stoves, etc., 5; chimnies on fire, 4; boiling over of chemicals, pitch, etc., 4; tobacco smoking, 3; hot ashes placed in or near wood, 2; lighted candles, 1; defective flue, 1; children playing with lucifer matches, 1; explosion of heavy metal casting, 1; fire crackers thrown into yard, 1; burning out bees' nests, 1; total, 56.

The Engineer complains of the water supply and says there has been no improvement since the date of his last annual report. He objects to the shutting off of the water on Tuesdays and Fridays, as when it is off should a fire occur considerable delay must ensue before a supply could be obtained for the engines. He mentions an instance where this occurred in December last, and a delay of eleven minutes was incurred. A large amount of property was in consequence destroyed. In August last a large amount of property on Adelaide street was destroyed through an insufficient supply of water at a hydrant belonging to the Water Company. Mr. Ashfield thinks the present annual charge of $4,524 excessive for the supply of water; the amount required annually is three quarters of a million gallons, but if a million gallons were used the cost would then be $4.50 for every 1,000 gallons, which it is said other consumers get for twenty cents.

A large portion of the city deriving no advantage whatever from the Water Works, the City Councils of former years, made appropriations for the construction of water tanks in various parts of the city far distant from any supply of water for extinguishing fire. There are now sixteen of these tanks each of which will contain about 14,000 gallons, and will afford a good supply of water to a steam engine, doing ordinary fire work, for about one hour and a half. Several of these tanks were in use for extinguishing fires during the past year—and in every instance afforded a sufficient supply for the purpose.

Mr. Ashfield then refers to the location of these tanks, and says:—

For the protection of the valuable buildings and the vast amount of property on Front street, and the south of it, and as far north as to King street, in case of accident to the Water Works; it is again respectfully recommended that a small Tank with feeder—similar to that on Bay street, be placed on each of the principal streets leading to the Bay, and as near to Front street as possible. These Tanks would always be ready with an unlimited supply of water, and with the Steam Fire Engines, would be a means of protection to property within a distance of one-fourth of a mile from each. Three of these Tanks, one on Yonge street, one on Church street, and one on the street East or West of the City Hall, are most urgently required, and could all be completed for about one thousand dollars.

The apparatus of the fire department consists of 3 Steam Fire Engines; 2 Large Hose Carts, and one small one; 1 Hook and Ladder Truck with Ladders, Hooks and Axes; 2,350 feet of good Rubber Hose; 800 feet of middling Rubber Hose; 600 feet of indifferent Rubber Hose; 2 waggons for hauling fuel, &c. &c.

The Fire Department consists of one Chief Engineer and one Assistant Engineer, two engineers and two firemen of steam engines, one caretaker of hose, &c., and one Fire Company of thirty four men, including one buglar, in all forty-one men, exclusive of supernumeraries. The Fire Company is told off into three sections of eleven to each—ten men and a foreman. Sections Nos. 1 and 2 are branch and hose men, section No. 3 are hook and ladder men, and to each section are appointed three supernumerary members.

The total expenses of the fire department in 1868 were $12,547.37. In reference to a better system of fire alarm, the Engineer says:—The Automatic Telegraph Fire Alarm, respecting which a communication from Messrs. Gamewell & Co. was recently laid before the Council, is deserving of the best and most serious consideration as soon as possible. It is probable that with that system of fire alarm in operation, the two steam engines at present in ordinary use would be more effective for the protection of property in parts of the city distant from the engine stations, than four engines would be without it. With the telegraph in operation, several of the expenses connected with the alarm bells at present in use, could be dispensed with.

Financial.

TORONTO STOCK MARKET.

(Reported by Pellatt & Osler, Brokers.)

A fair business was done during the week. Building Society stock, debentures and mortgages have been freely dealt in.

Bank Stock.—The business done in the shares of the various banks was, with one or two exceptions, very limited. Montreal sold at 144, 144½ and 145; the market closed with sellers at 145½ and buyers at 145. Sales of British were made at 105, at which rate there are buyers. No sellers of Toronto under 122, and buyers at 121. Royal Canadian has been largely dealt in; there were sales in the early part of the week at 75 and 76; buyers have now advanced to 77½, but there is very little stock on the market under 80. Small sales of Commerce were made at at 102¼ and 102¾; there is some inquiry for the stock at the former rate. Gore is offered at 41 without buyers. Merchants' has sold at 107½ and 108, but declined slightly, closing with no buyers over 107¼. Quebec is firm and in demand at 101½, with no sellers under 102. There are buyers and sellers of Molson's at 109 and 110 respectively. City closed rather heavy at 102¼ and 102¾. Du Peuple is in fair demand at 108; little in market. Buyers offer 107½ for Nationale; none offering. Small sales of Jacques Cartier occurred at 109 and 109½; it is offered at the latter price.

Debentures.—Government securities are in good demand; Canada currency and sterling six per cents are asked for at 103; five per cents are nominal at 93 and 94½. Dominion stock has been sold at 106¾, and Dominion bonds at 105½. There have been no Toronto debentures on the market for some time; they would be readily taken to pay 6% per cent. County have been sold to some extent at 99 to 100. There is a slight tendency to lower rates.

Sundries.—Canada Permanent Building Society has been freely dealt in at 125½ to 126; there are still buyers at the latter rate. Sales of Western Canada Building Society were made at 120¼, 120¾, 121 and 121½. Freehold B. S. sold at 110½ and 111; there are now buyers at 111. Buyers offer 132½ for Montreal Telegraph, with sellers at 133. Small sales of Canada Landed Credit occurred at 78 and 79; sellers generally ask 80. City Gas is enquired for at 108 and 108½, at which latter rate there have been small sales. British-American Assurance is asked for at 55; there are sellers to a limited extent at 56. Mortgages have been freely offered at 8 and 8½ per cent on first class farm and city property. Money continues in demand at advanced rates.

TORONTO CITY FINANCES.

At a meeting of the City Council on Monday last the Chamberlain submitted a statement showing the receipts and expenditures of the Corporation of Toronto for 1868.

The total amount of revenue received for the year, including the sum of $51,553.66, which was in bank and on hand, on the first of Jan., 1868, was, $803,921.41. The amount of payments for the year was $692,208.84, which, with cash in bank and on hand, 31st December, viz: $111,712.57, amounts to $803,921.41.

Statement of the floating liabilities and assets of the Corporation of the City of Toronto for the financial year ending 31st December, 1868:

LIABILITIES.—Due to sundry special accounts being balances at credit of said accounts 31st Dec. 1868: Debentures due and not presented for payment, $14,567.50; sinking fund accounts, $17,678.88; police reserve fund, $667.73; private drain account, $429.01; common school account, $5,920.00; grammar school account, $827.00; City Registry Office building, $5,000.00; public walks and gardens fund, $234.48; local improvement sewers $25.78; western market fund, $3,413.62; street watering accounts, $594.22. Total—$210,362.

Due to the following accounts being balances at credit of said accounts required to meet outstanding claims: Discount on debentures unexposed of, $8,922.00; interest on debentures due 1st January, 1869, $15,521.66; Municipal salaries, $3,094.53; gas supply, $5,386.04; water supply, $2,358.48; Board of Health, $159.8 advertising, $12.46; consolidation city by-laws $1,672.50; street repairs, $1,477.15; special macadamizing, $12,414.00; printing, $471.58; stationery, 1,012.38; water tanks, $277.66; election expenses, $231.15; charitable grants, $1,757. County York rent of Court-house, $700.00.—total, $55,469.00. Due to Bank of Toronto notes under discount not yet matured, $111,000.00.—Total liabilities on account of year, 18 $376,831.00.

ASSETS.—Due from following sources: Debentures to be negotiated on account of Sinking Fu $58,290.03; rentals due, $13,500; market f $2,625.67; maintenance of county prison $556.80; Province of Ontario on account of g expenditure, $2,500; bills receivable, $262.6 taxes of 1868 uncollected, $225,108.25, less p bable losses and arrearages, $28,108.45—$196,0 public buildings account, amount over expen ture in 1868, $365.97; gaol and industrial fa amount over expenditure in 1868, $427.50.

Cash on hand and in bank 31st. Dec. 186 Bank of Toronto, general account, $39,233. Bank of Toronto, Sinking Fund account, $69,1 93; Bosanquet, Salt & Co., Sinking Fund accou $62.80; Bosanquet, Salt & Co. general accou $2,380.55; on hand, as per cash book, $930.8 Total, $111,712.57. Total amount of ass $386,241.19. Surplus assets over liabilities, $ 539.92.

The statement of the financial results of year showing a surplus of $10,534.06, cannot to be satisfactory to the Council. This sur

ises principally from a large amount of arrears the taxes of the year 1867 having been received, d a larger amount received for commutation of wer rates than what was estimated, together ith several Esplanade awards having been paid full.

he amount of debenture debt on
the 31st Dec. 1867, was.....$2,114.853 44
do. do. 1868, " 2,065,594 22

$49,259 22

Showing that the debt has been reduced during e past year by the sum of $49,259.22. This adual reduction of the debt must be a source of tisfaction to the citizens, and there is no doubt at in the present prosperous state of the city a nsiderable reduction can be made during the esent year.

The amount at the credit of the sinking fund the 31st December, was $168,678.88, the par-ulars of which are as follows :—Debentures held London on account of the fund, $58,156.70 ; sh in Bank at Toronto, 31st December, $69,-4.93 : amounts in process of collection, $51,-7.25.—Total $178,678.87. The latter amount included in the assessment rate of 1868, a large portion of which had been realized since the st of December, and is now lodged in the Bank Toronto. The amount at the credit of the nd in Bank at this date—5th April—is $112,-5.92.

It is very important that the whole of this fund, a nsiderable portion of which is yielding only four cent. interest, should be immediately applied the payment of the debentures for which the nd was instituted. These debentures might be rchased at a discount and the amount thus legi-nately invested would be a saving to the Corpo-ion of about three per cent per annum. The ing which would be thus effected would be out $3,000 annually.

STATEMENT of the revenue and expenditure of Dominion of Canada for the month ended 31st rch, 1869 :

stoms	$630,592 24
cise	265,764 83
st Office	15,584 04
l Stamp Duty	8,095 34
blic Works, including Railways	43,773 85
scellaneous	28,847 20
Total	$992,657 50
penditure	$546,019 79

BEWARE.—The numbers and amounts of the nds stolen about a year ago from the Western ion Telegraph Company are: No. 17, $600; . 48, $600; No. 187, $500; No. 188, $500; No. , $500; No. 208, $500; No. 842, $500. Pay-nt of the bonds has been stopped. The robbers said to have been traced to Canada.

THE BANK CHARTER QUESTION.

AN INCONVERTIBLE CURRENCY.

V.

At the outset of this discussion we asserted, on what we think will be admitted to be tenable grounds, that an extension of the Provincial note system that should displace the existing bank notes, or the substantial adoption of the National Bank law of the United States, would prove the inevitable precursor of a suspension of cash payments. Adhering to this idea we proceed to examine some of the consequences that would result from so disastrous a monetary revolution.

Most objects of desire and commerce possess properties of which it is necessary to ascertain definitely the extent or value. When a web of cloth is sold its superfices has to be ascertained, and we have a determinate measure which we can apply to it and thereby ascertain its length, width and extent. The measure by which this is done is a thing of unvarying value, a foot, or an ell, or a metre, or a yard, is not longer or shorter at one time than another; it neither contracts nor expands, and it is this quality of being always of the same determinable length that gives it its value as a common measure. If a chest of tea has to be sold the operation is a different one ; here we must be guided by weight, and that weight consists of a certain positive and unchanging quantity. It is never more or less at one time than another, but is always the same. Besides superfices and weight, either of which may without the other, attach to exchangable commodities, all objects of commerce have another property —value—which requires an instrument by which it can be measured. That instrument is money. All civilized nations for reasons which they have regarded as sufficient, have unanimously agreed in making one or both of the precious metals, gold and silver, a common measure of all other values. Not that a pound of silver or an ounce of gold will at all times, and in all places, measure or exchange for an equal quantity of flour, cloth, iron, or any other commodity; but either of them would be a perfect measure as nearly as possible, of all kinds of commodities at the same time and place. The variation here indicated does not take place in the measure of value, but in the value itself. Gold and silver have not always been absolutely unchangeable in value, but any deviation they may have undergone in this respect has extended over so great a length of time that it has produced no practical inconvenience. This quality of being but little liable to variation in value is perhaps the strongest of all those which have combined to compel the general assent of mankind to their adoption as a measure of value. They have other qualities which have had a share in recommending them. They have cost much labor to produce them; they are useful in the arts and are nearly indestructible. You may submit them to fire, bury them in the earth, let them lie for ages in the water, subject them to acids that would destroy ball metal, and they will neither be diminished in quantity nor deteriorated in quality. Compared with almost anything else that could be adopted as a measure of value, they are free from cumbrousness, being compact and easily handled.

All experience shows that with our present knowledge, and in the existing state of human society, a wise selection was made when, by common consent, the precious metals were converted into an instrument for measuring the value of all other commodities. There have been times of crisis, of peril, of danger to national existence, of mad and visionary speculation, when nations have attempted to supersede the precious metals by the substitution of printed bits of paper, promising to pay on demand, what the issuers notoriously did not possess. The result has always been disastrous. Of the governments which have so issued their promises, there is not one, Sismondi tells us, " which has not sacrificed " to the wants of the moment the security " of the future, and the justice which it " owed to its own subjects; not one which " has not multiplied its paper to three, often " ten, and even twenty times the nominal " value of its specie." In 1805, Spain had in circulation under the name of *vales—reales*, one hundred and twenty millions of paper dollars, which were at a discount of 58 per cent ; and afterwards, the discount rose as

high as 88 per cent. The States of Sardinia, of Naples, and of the Pope, also made a like abuse of paper money, of which the value was reduced to nothing, and was cancelled by the force of revolution. "The circulating "capital of France," according to Sismondi, "was twice almost entirely destroyed by "paper money; the first time by Law's Bank, "and the second time by assignats. Dur- "ing the depreciation of paper, no one sold "without being obliged to replace his goods "at a higher figure, so that every exchange "was a loss, and the results of the accumu- "lated labor of preceding ages being gradu- "ally subjected to like sales, were in the end "destroyed." * * *. "At the second epoch, "anything that was susceptible of being sold, "however by its nature unlikely to become "an object of commerce was exported. Shops "of every kind were emptied of their goods; "the book stores even underwent the same "process, and old furniture was in its turn "shipped off to foreign countries. Commerce "had acquired a false activity. The nation "seemed to be selling heavily, but it received "for its pay only paper which had no value, "and in the end it found that it had exchanged "all its material wealth for 45,579,000,000 of "francs in assignats, which at the moment "of their suppression, on the 7th of Sept., "1796, were worth only three sous, six "deniers to the one hundred francs."

These lessons of history ought to be a sufficient warning not to set up a system of banking and currency which will bring about like calamities. If the government of this country were to insist on compelling the banks to advance to it the great bulk of their capital, no matter what might be the pretext under which the law was framed, there could be but one result. The banks would, in that case, become much more liable to failure than at present, and the catastrophe would not be unattended with individual, almost amounting to public, suffering. The bill-holders might possibly be secured but the depositors would suffer. The notes might, or might not, be guaranteed by the government. If they were, the operation might take this shape. The government, we will suppose, wants to raise money outside of the revenue, to add a few millions to the public debt. This can only be done by borrowing. The question is what is the best way of doing it? by going into the open market or by a forced loan from the banks. In the former case the government would know precisely at what rate it was borrowing, and what it would have to pay. In the latter case, it would be groping in the dark, and might have to repay twice as much as it borrowed. That might occur in this way, the faith of the Dominion being pledged to the redemption of the notes, if the securities deposited by the banks became depreciated in value, the government, that is, the people, would have to pay the difference. It is quite conceivable that something might occur to reduce the selling price of Dominion debentures to fifty per cent. of their face value. In that case new securities would have to be issued and sold at a time when the public credit could least bear an additional pressure upon it. Every successive sale would bring down the value. On the other hand, if the notes were not guaranteed by the government and the securities on which they were based, underwent a great depreciation, how would the note-holders be paid more than a fraction of their claims? Certainly not out of the fund destined for the redemption of the notes. In the first case the general public would lose; those very bill-holders for whose benefit the scheme would have been ostensibly adopted would be the victims.

The downward course, once entered upon, would be rapid. If the Government itself, issued or authorized others to issue paper of this description, it could not refuse to receive it in payment of public dues. Thus while it was nominally receiving one dollar revenue it would really be only receiving fifty cents. Further expansions of credit would follow, and the paper would at last become only of mere nominal value. That is the course and the history of nearly every such transaction, and we need not flatter ourselves that any exceptional immunity will be accorded in our case.

Let no one say that these predictions are founded on false fears. We have already declared, by legislative enactment, the Provincial note to be equivalent in value to gold. Everybody to whom it is offered is obliged to accept it. It is true specie can, under the law, be demanded for these notes, but the operation is little better than a farce when they can be re-issued as specie the next moment. *

When paper money begins to depreciate the usual course is for the Legislature to step in and declare it equivalent to gold. In France Law's bank notes were declared, by Governmental authority, worth five per cent. more than specie, and the public was ordered to take them on these terms.

In England, during the long suspension of specie payments, which commenced near the close of the last century, a law was enacted declaring Bank of England notes equivalent in value to gold, and annexing a penalty to the offence of offering or taking them for less. So gross an interference with existing contracts has only of name to describe it, and that is robbery.

Let us be guided by the experience of t past to avoid the wide-spread calamiti which an irredeemable paper currency wou inflict on the country.

* Tout papier dont les course is forcé doit être considéré comme un papier-monnaie, encore qu'il soit acquitté à bureau ouvert car ce paiement est sans doute illusoire des l'instant qu'on s'est vu obligé de forcer acceptation du papier et de la déclarer par la loi équivalent à l'argent.—*Sismondi.*

DOMINION TELEGRAPH COMPAN

The stockholders of this company are ill ease. A few days since a number of the resident at London, held a meeting and solved to pay no calls on their stock un more satisfactory information was received to the precise character of the scheme; t people of Owen Sound seem also interest in the solution of a few knotty points, a clamor for more light; the Quebec peopl out of a prying curiosity, we suppose, sent representative directly to headquarters f facts and figures, and this after the issue a lengthy certificate signed by the Preside and all those influential directors who ha the scheme in hand, as to the soundness the undertaking. However if the desir information is at last obtained we hope will be given to the public; surely t Quebec subscribers will not hide their lig under a bushel. Meantime, in the absen of such intelligence respecting the arrang ments of the Company as ought, *under t circumstances*, to be given to the public, a to all the shareholders especially, we hav few facts to submit, which at least point moral.

The Directors admit the existence of contract binding on the Company to p Mr. Reeves, the promoter, floater, co tractor and principal stockholder, the sum $250 a mile for some two thousand miles double wire. Making a note of this let state another fact: A telegraph line of similar character is about to be construct running from Ottawa to Quebec. This called "The People's Line." Quite recen the contract for building the section fr Ottawa to Montreal was let—the line to turned over to the Company by the 1st August next—at the rate of $76 per m without the wires. These the Company to furnish, and will cost from $40 to $44 mile for a double wire. Taking this as basis let us estimate the cost of one mile this line:

Contract price, building, per mile.....	$
Wire (double).....	
Instruments, batteries, etc., average.....	
Cables.....	
Advertising and sundries.....	
Total cost, per mile.....	$1

No one who knows anything practically the subject will deny that we have made liberal allowance for expenses and conti gencies. At this rate then the two thousa

miles of line which the Dominion Company propose to build would cost $300,000. But with Mr. Reeves as contractor and $250 per mile as the rate, the two thousand miles will cost $500,000—leaving the modest balance of $200,000 as Mr. Reeves' profit after paying liberal expenses!

More than this, we believe that when the public are admitted to the secret history of the deliberations of Mr. Reeves and *his* directors, it will appear that the contract was originally at the rate of $400 per mile of double wire and that on the urgent representations of the directors—in consequence of the exposures made by the press—Mr. Reeves, out of the generosity of his heart, made the company a present of $150 per mile on his contract or $300,000 on the whole job. This *liberal* reduction being made, the contract was signed and concluded with the directors as it now exists.

In all this there is a practical question for the shareholders to consider. We have shown that Mr. Reeves must make a clear profit, if he carries out the contract, of $200,000; what then will the company have to represent this large sum, or to earn a dividend on it? This is the point to be investigated. The subscribers will act wisely to refuse the contribution of another cent to the company's exchequer, till this all important matter is cleared up—till something more than vague general statements are afforded such as those with which the officers of the company have endeavored to conciliate those who believe themselves to have been induced by false representations to subscribe for the stock.

It will not do for the backers and tooters of the company to raise the cry of "grasping monopoly" as an answer to those who are determined to know the truth respecting it. This has been the watchword of these gentlemen from the start, and has done duty everywhere. Monopolies are always bad and we would not, if we could, offer an apology for them; but it is just possible that the stockholders of the Dominion Company may come to the conclusion before they are much older that there are still greater evils in the world than even such a monopoly as now controls the telegraphing business of Canada.

BRITON LIFE ASSOCIATION.

We devote a good deal of space to the annual Report, and the proceedings had at the annual meeting of this Association. The net results of the year's business were: a dividend to the proprietors at the rate of 8 per cent. and a balance of profit, after paying all expenses and charges, of over $340,000. The annual premium income has risen to nearly $1,000,000 and the interest on investments to over $100,000. The new business of the past year is represented by 2,472 policies, assuring over seven hundred thousand pounds sterling and producing in annual premiums over twenty-five thousand pounds. A careful valuation of the company's policies was made by Mr. Arthur Scratchley, aided by the actuary and secretary of the company, Mr. John Messent, upon whose report a bonus was declared to the shareholders and and policyholders of over $430,000—the latter receiving all but 10 per cent of this sum.

The meeting seems to have been a most agreeable one, and with the existing state of affairs it would be difficult to find fault. Arrived at the close of the fifteenth year of the Company's existence, the directors very properly give us the history of its progress during that period. This is done in a neat but comprehensive table in the report. Every effort seems to be put forth in the direction of thoroughness, economy and general good management, and we think the exhibit made at the close of 1868 is the best possible proof that the control of the Company's affairs has fallen into good hands.

REFINING PETROLEUM—A GREAT DISCOVERY.

For years past the petroleum trade of Canada has been in a stagnant condition. The demand has been strictly limited to the requirements for home consumption, so that a little over-production always resulted in glutted markets, a fall in prices, and losses to the well-owners and refiners. The offensive odor that Canadian refined oil exhales has condemned it in European markets, and branded it as unfit for use. All the numerous attempts to remove this odor have hitherto proved fruitless, but we now have the true satisfaction of informing the public that this seemingly insuperable obstacle *has been entirely overcome.*

So thoroughly has this been accomplished that a number of the most experienced refiners in this Province have organized a company in order to unite their capital, energy, and business capacity in the establishment of an export trade in this most valuable product. Already works are in operation in the city of Hamilton where the process of deodorization is being carried on. The refinery of Messrs. J. M. Williams & Co. is being used temporarily for the purpose. When the manufacturing establishment which the company are erecting at Hamilton shall be completed, it will have a refining capacity equal to one-half of the united capacity of all the refineries in the Province, or from 2,000 to 3,000 barrels per week. The latest and most useful machinery will be used, reducing the cost of manufacturing to the minimum.

It is proposed to distil the oil at Petrolia, and convey it to Hamilton in tank cars, where it will be "treated" and shipped by the narrow gauge on the Great Western Railway to the seaboard at Boston or New York. A still is being erected at Petrolia of 2,800 brls. capacity—probably the largest still ever built, the largest in Pensylvania being about 1,200 barrels. A great portion of the oil for exportation will be put in tin cans of 5 gallons each, which will be shipped in wooden cases, two in each case. This is the most approved package for shipment to the European countries, the oil being in a suitable shape for retailing without change of package. It will, besides, be shipped in barrels in the usual way.

"The Ontario Carbon Oil Comp'y of Hamilton" consists of the following well-known gentlemen, the mention of whose names is in itself a guarantee of the entire success of the enterprise, and that whatever capital may be necessary to the vigorous prosecution of the business will be forthcoming:

Messrs. Parson, Brothers, Toronto.
Messrs. Duffield, Brothers, London.
Messrs. J. M. Williams and James Cumming, Hamilton.
Judge Higgins, Chicago.

These gentlemen have already purchased about 40,000 barrels of crude oil, which is a proof of their full confidence in the success of what they have undertaken. The matter is not, however, a mere experiment, the company having already turned out some 2,000 barrels of the finest oil ever offered in the market, not excepting the best Pennsylvanian. Such, at least, is the opinion of the most competent judges. A lot of 500 barrels is being shipped this week from London to the Boston market, where it has been sold to arrive, at a price equal to that obtained for the very highest grade of American oil. Another lot of 500 barrels, made by this process, was shipped to Halifax, where it is selling readily, and is spoken of in the highest terms in contrast with American.

Oil prepared by this process is found to have a specific gravity of 44 degrees, while Pensylvania stands at 46°; the fire test by the American standard is 130°, and the Pensylvania, by the same standard, is 112°, so that both in point of burning qualities and safety, it must take the precedence over American oil. In the new mode of manufacture such a saving is effected in the cost of refining that the very best oil can be produced at as low a rate as the commonest grades now manufactured. It is also affirmed of the new product that the pleasant aromatic odor it possesses in the first place becomes (quite contrary to the usual experience) more pleasant the longer the oil is kept. The peculiar chemical pro-

cess by which all this is brought about is, of course, a secret, the value of which may be inferred from the above facts; and the profit likely to arise from it to those directly interested we do not attempt to estimate. It is sufficient for the general public to know that the home market will be supplied and a large export trade also opened up in Canadian Petroleum—a trade which will permanently relieve this suffering industry, and confer an inestimable benefit on the whole country.

THE LANCASHIRE INSURANCE COMPANY.

The annual report of this office for 1868 shows an increase in every department of the business. The fire premiums amounted to £112,579, and the net profit made after paying losses, re-insurances, &c., was over £21,813. In the Life department the income was £46,636, from which were deducted £15,978 for 41 death claims, and some smaller sums, leaving a profit of £18,359 18s. 6d., which was added to the life reserve fund, increasing it from £150,971 last year to £169,331.

The rapid accretion of the life reserve was pointed out by one of the speakers—in 1863 it was £94,700; in 1865 it was £155,300—an average addition of £10,500 per annum—in 1865 and 1867 it stood at £151,000—an average addition of £17,500 per annum—and in 1868 it was swelled to $169,330, showing an addition in the year of £18,350, being the largest addition yet made. The fire premiums in the same time run up from £57,000 to £113,500, and the reserve in this branch is nearly £49,000. A dividend of 10 per cent. was declared on the year's business.

The remarkable statement was made by the chairman that every one of the branch offices made a profit during the year. No better proof could be given that a careful supervision is exercised. The Ontario agents Messrs. S. C. D.—Clark & Co.—have fully maintained the character of the company for good management, having a very satisfactory account to render of the Toronto and Hamilton business—the only points where agencies are located in Ontario.

We understand the Montreal Assurance Company have determined to resume ocean business, and are prepared to take risks to and from ports of Great Britain.

—The township of Scott has voted a bonus of $10,000 to the Toronto and Nipissing Railway. The total amount voted in aid of this road is $399,000. Two townships more are expected to vote bonuses in aid of the road bringing the total up to $426,000.

LONDON CORRESPONDENCE.

(From a correspondent.)

London, 18th March, 1869.

On the Stock Exchange there has been much excitement during the past week, with regard to the Hudson's Bay Company's shares. A few days ago buyers were numerous and prices advanced. Rumours were circulated that the terms of settlement proposed by Earl Granville would prove highly satisfactory to the Company. This was gratifying, and those who purchased shares at par, that is £20, cannot dispose of them except at from 6 to 7 per cent discount. The rise in the price was nearly £1, and the expectation was that a greater rise would take place. These hopes were blasted yesterday, on the announcement of the arrangement offered to the Company on the one hand and to Canada on the other. The nature of that proposition will doubtless have been transmitted to you by telegraph. Instead, then, of recapitulating the proffered terms, let me state for the information of your readers, the relation they bear to the anticipations formed here by those having a pecuniary stake in the Company. Two shareholders have taken leading parts in the discussion, as to terms, and have been authorized to represent many of their brethren in misfortune. According to one of them, £5,000,000 sterling is the amount which the Company ought to receive for the cession of its territorial rights. If these terms cannot be got then it is proposed to employ the Company's funds in colonization. No less than 130 shareholders are stated to have pledged themselves to insist upon carrying out this programme. Another shareholder is more reasonable. He maintains that as the territorial rights from 1863 have represented one-half of the assets, a sum equivalent to this is the minimum at which those rights ought to be sold. This amount is £1,073,192. I do not err, I think, in stating that the latter proposition is the one which finds general favor among the shareholders. The belief is current among them that the least they ought to receive is £1,000,000. Moreover, they have resolved to make large claims in the shape of territory. Under these circumstances, as you may well suppose, the announcement that the price fixed by Earl Granville was £300,000 only, gave general dissatisfaction. The shares were at once offered for sale and declined in value. At the meeting on the 24th of this month, the answer of the shareholders will be formally given. That it will be adverse is not improbable. If so, the delegates from your Government will have to return home empty-handed. Yet they will not have labored in vain. At present the feeling is gaining ground that Canada is acting both prudently and graciously in this matter. It may seem to you quite natural that such should be the opinion of the majority. But it must be remembered that in this country, and more particularly in this city, the social and political influence of the Hudson's Bay Company have heretofore sufficed to prepossess the public mind in its own favor. Among the shareholders are men of high position and great power. Of course they do what they can to further their own interests. It is no light task to run counter to these men and come off victorious. I think, however, that the efforts of Sir George Cartier and the Hon. W. McDougall to gain their point have been remarkably successful. The best proof of this is furnished by the newspapers. In the most influential and widely circulated journals there have appeared articles of a kind which the Company cannot relish, and with which Canadians ought to be pleased. I hope that the shareholders will listen to reason. As earnestly do I hope that in the event of the Company taking the prudent course, that Canada will manifest no reluctance to accept the solution of the problem.

The first general meeting of the Colonial Society was held last Monday, when Lord Bury, the president, delivered the inaugural address. I a short report of the proceedings has yet appear The address was very able and produced a m favorable impression. Perhaps too much wei was attributed by Lord Bury to Mr. Gold Smith. Many persons are disposed to consi the opinions of that skilful tutor as the basis Imperial policy. This is contrary to fact. N of our distinguished statesmen agree with Smith. At the meeting of the Colonial Soci the Right Hon. Chichester Fortescue, repudia the notion that any government would approv the dismemberment of the empire in opposit to the wishes of the colonists. As an estee member of the existing government he co speak on this head with good effect. At the n meeting of the Society a paper will be read by Australian colonist on the question which been raised by Mr. Smith. It will then be s what views are entertained by enlightened n here as to the relationship which ought to e between the Mother Country and her dependenc

At this moment, the subject of emigratio coming before the public under various for Societies have been formed to aid those desir it to proceed and settle in some county wh wages are high and labor scarce. Some of Australian Colonies are making strenuous efforts turn the tide of emigration to their shores. A meeting, chiefly composed of workingmen. h last week, the advantages of settling in Austra were enlarged on by several speakers. Inde the object of the meeting was to put forth claims of Australia as a land of promise to industrious. Among the notables who recei an invitation to the meeting was your Ministe Public Works. Being allowed to address assembly, he urged the claims of Canada w vigor and success. The picture he presented more attractive to the majority than that wh the representatives of Australia held up for th admiration. Had it not been for the accide circumstance of the Hon. W. McDougall be at present in this country, this meeting wo have heard nothing in favor of Canada. Each the Australian Colonies has a representative l commissioned to speak in its behalf when occas requires.

The money market continues stagnant. vestors still hesitate to embark their savings new undertakings. The only exception app to be that of Companies for laying submar telegraphs. Two of these are now competing public patronage, both being designed to coun India and our other Eastern possessions w England. In the case of one, however, a gr experiment will be tried. The cable is to much lighter, and consequently much less co than those at the bottom of the Atlantic. Sho this prove successful, a great impetus will given to submarine telegraphy. From La shire there are bad news. A strike is impend among the cotton workers. The dullness of tr has compelled the masters to reduce the rate wages ten per cent., and this is resisted by operatives. Altogether, the prospect is a gloo one.

Commercial.

Toronto Market.

At this comparatively early period vessels ha begun to move and navigation is fairly op Some two or three vessels loaded with grain h cleared for Oswego, and one or two arrivals at t port are reported. Among the clearances w the Paragon and New Dominion with white whe freight at 3c. U. S. currency; the Tranchem tagne also with wheat, freight 4c. U. S. curren The steamer Norseman has commenced runn from Port Hope to Rochester with passengers freight; the schooners Garabaldi and John Stev son have left that port with wheat for Oswe Charters have been made from Chicago to Buf at 10c. for wheat, 9½c. for corn, and 7½c. for oa

he prospect for vessels is, upon the whole, considered fair.

Trade has somewhat improved during the week; ere are a number of country buyers in town, it business for the season is only just comcneing.

GROCERIES.—*Sugars*—The New York market from ⅜ to ½c. lower on raw sugars, and ½ to ⅝c. n refined than it was a week ago. *Teas*—A eady trade is doing; some common kinds are ther dearer without much quotable change. other articles there is little to report.

HIDES.—The market is dull, and there is very tle demand for trimmed and inspected; our otations show a reduction on the figures of last eek.

LEATHER.—A fair business was done with the ty trade at quotations.

GRAIN.—*Wheat*—Receipts 2,342 bush., and 140 last week. There has been some demand r spring during the week, and sales of 10,000 shs. at 90c. at Kineardine, and some cars at to 98c. are reported; and there are also reports sales amounting to 20,000 bush. at $1 in ships' gs free on cars; the market closes dull and unttled. with no buyers at these figures, and holds seemingly anxious to sell. Fall is dull at otations; no demand and no sales; midge proof nominal. The stock of Wheat in Toronto on areh 31st was—Spring, 105,100 bus.; Fall, 4,400 bus. *Barley*—Receipts light; the market weak, in sympathy with New York, where there re large receipts from Germany, and sales at .10 to $2.12; in our market small lots are selling $1.15 to $1.20; stock on 31st March 30,500 sh. *Peas*—Receipts trifling; they are held at c. for good samples in car loads, and are worth out 75c., but there is little demand; stock 31st arch, 35,100 bush. *Oats*—Receipts 1,800 bushs. d 1,200 bushs. last week. The market is firm d higher at 53c., and 55c. has been paid for loads on the Northern Railway; stock 31st arch, 21,900 bushs. *Rye*—Nominal at 60c. *rn*—Is worth from 60 to 62c. in car loads. *eds*—Timothy seed is offering freely, and some es of No. 1 were made at $2-60 to $2.65; we ote the market at $2.25 to $2.60. Clover is ll and held at $6.25 to $6.50, but no buyers at outside quotation. Flax seed $2.

FLOUR.—Receipts 2,342 bbls. and 1,300 bbls. t week. There is some demand for small lots $4.05 to $4.10, holders asking higher prices; es 100 bbls. at $4.05 in store; 500 bbls at $4.05 Rockwood; 100 bbls. at $4.10 free in cars, and bbls at $4 in store. Extra is held at $4.50. her grades not quotable. Bag flour may be oted at $3.80 to $3.90. The stock of flour in ronto 31st March was 25,800 bbls. *Oatmeal*—ering at $5.50 to $5.60; the demand is very ited.

PROVISIONS.—*Butter*—Prime is scarce, and uld bring 24 to 26c.; anything under this ality is not wanted. *Mess Pork*—Car loads are d firmly at $26, and a sale occurred at that ce. *Lard*—Is dull; a lot of 60 pkgs. sold at c. *Eggs*—Are rapidly declining; offering at to 17c. and buyers at 15c.; they will soon be n to 10 to 11c. *Bacon*—Cumberland scarce held at 12c., ordinary at 11½c. *Dressed gs*—None selling.

PETROLEUM.—The price for car loads of white educed to 33½c., which is the only quality now ing in lots; there is a quiet demand.

FREIGHTS.—Rates by Grand Trunk Railway:—ur to all stations from Belleville to Lynn, insive, 35c., grain per 100 lbs. 18c.; flour to ckville and Cornwall, inclusive, 43c. grain 22c. r to Montreal 50c. grain 25c.; flour to all ions between Island Pond and Portland, insive, 85c. grain 43c.; flour to Boston 90c., l, grain 45c.; flour to Halifax 98c., grain —c; r to St. John 98c. Boxed Meats to Liverpool gross ton 82s. 6d.; lard or butter in tinnets 6d.; Pork 11s. per tierce; flour 5s. 6d. per rel; grain 12s. per 480 pounds. Rates by Great Western Railway—Flour, Toronto to Suspension Bridge 25c. gold; thence to New York, 92c. U. S. currency per bbl.; to Boston $1.02. Grain to Bridge 13c., gold; thence to New York 46c, U. S. currency; to Boston 51c. Grain, Toonto to Detroit, 18c. ber 100 lbs; flour 35c per bbl.

Halifax Market.

BREADSTUFFS.—We note no quotable change in flours during the past week. Supers continue in request, while other grades are entirely neglected. Oatmeal is still without buyers, with stocks increasing from local supply. Cornmeal is without change at former quotations. White wheat extra, fall, $6.50 to $6.60; fancy, $6.10 to $6.25; bakers' strong, $5.75 to $5.90; supers, $5.60 to $5.65; No. 2, $4.50 to $4.75; middlings, $4.25 to $4.50. Rye, $4.75. Cornmeal K. D., $4 to $4.10; F. G. $3.80 to $3.90. Oatmeal, $7. White beans, $2.80 to $3.

PROVISIONS.—Pork continues without change at former quotations. Beef dull and unchanged. Pork, $18. Beef, mess, $10 to $12. Lard, 16c. Cheese, 15c.

WEST INDIA PRODUCE.—The demand for sugars and molasses has somewhat abated, sellers being supplied to a certain extent, are now waiting the opening of the spring trade before making any further transactions. Our receipts of both the above are considerably short, as compared with those of the same period last year. Holders are willing to take the risk of the markets, while buyers act cautiously in expectation of lower figures. Sugar V. P., 10½ to 11c.; Porto Rico, 9¼ to 9½c.; Barbadoes, 9c. Molasses---Cienfuegos, 44 to 45c.; Trinidad, 41 to 42c. Rum, in bond, Demerara, 58 to 60c. Coffee, Jamaica, 13 to 15c.; St. Domingo, 11 to 13c.

FISH AND OIL.—Our markets for fish exhibit no change. Stock continues light, with small receipts. Cod oil has somewhat improved; we notice a sale at 59 net, best, for a small lot. Other descriptions unchanged.

EXCHANGE.---Bank drafts, London, 60 days, at 13 per cent.; Montreal sight, 4 per cent.; New York sight, gold, 4 per cent.; Currency, 20 per cent. discount; St. John, N.B., 3 per cent. prem. —*R. C. Hamilton & Co.'s Circular.*

Havana Sugar Market.

HAVANA, March 24, 1869.—The *Weekly Report* says: The increase of shipments observable from this port to all ports from 1st January to date, as compared with the corresponding period in former years, is large. The cause of this increase we need not state as any one may easily trace it to the actual lamentable condition of the island, which induces planters to hurry up to market as fast as it can be manufactured, and buyers excited by the high prices paid abroad, to send out of the island all they can produce as fast it can be shipped. This explains the heavy receipts from the interior this year, which in quiet times would have led to the belief that an unprecedented large crop was being produced. The contrary, as is already known will prove to be the case, and the extent of the decrease at this date would not be exaggerated if placed at 30 per cent. comparing with last year's production. Receipts, exports and stock of boxes at Havana and Matanzas have been as follows:

Year.	Rec'd this week.	Total export Week.	Since Jan. 1.	Stocks, boxes.
1869.....	60,930	57,846	404,537	207,869
1868.....	82,451	50,902	359,928	266,684
1867.....	77,050	37,464	308,424	321,542

New Line of Steamships.

A Montreal paper says that the British Colonial Company have determined to cease running their line between London and Montreal, and that a new line will probably be put on that route. Messrs Temperly, Carter and Darke who were formerly the agents for the British Colonial Company, will despatch the Dacia on the 22nd inst. for this port, and will follow during the season. Mr. David Shaw will, we believe, represent the new line here.

The Next Cotton Crop.

The *Financial Chronicle* estimates the next crop as follows:

New Orleans.....	850,000
Mobile.....	366,000
Charleston.....	250,000
Savannah.....	500,000
Texas.....	175,000
North Carolina.....	38,000
Virginia.....	166,000
Tennessee, &c.....	450,000
Consumed in the South.....	95,000
Making the total crop below.....	2,890,000

Unusually favorable circumstances would add something to the above; but these figures show that all who are looking for a yield the coming season of about 4,000,000 bales and upwards (and there are many such) are doomed to a very severe disappointment; while on the other hand, those who say that the freedmen cannot pick over 2,250,000 bales, are equally in error. The above statement is given simply as furnishing an indication of the present *capabilities* of the country.

Breadstuffs.

The receipts of flour and grain at Chicago, Milwaukee, Toledo, Detroit and Cleveland from January 1 to March 27 were:

	1869.	1868.	1867.	1866.
Flour, bbls.....	1,321,309	684,931	747,492	570,602
Wheat, bush.....	4,993,277	2,198,873	2,123·585	5,513,232
Corn, bush.....	6,562,050	6,305,275	2,776,714	1,668,026
Oats, bush.....	2,094,024	1,439,594	1,095,894	1,287,735
Barley, bush,....	318,725	316,854	350,568	168,224
Rye, bush.....	374,932	134,480	214,150	175,912
Total grain, bush..	14,433,014	10,395,076	6,260,911	5,813,149

The stocks of wheat in store at Chicago and Milwaukee in 1867, 1868 and 1869, were near upon the following figures at a late date:

	1867.	1866.	1869.
Chicago, bush....	541,300	1,055,500	1,558,900
Milwaukee, bush..	656,400	1,114,000	1,673,000
Total.....	1,197,700	2,169,500	3,231,900

New Lake Tonnage.

The following additions to the existing lake tonnage will be made this season:

	No.	Tons.
Steamers.....	5	1,300
Propellers.....	8	5,380
Barques.....	5	3,400
Schooners.....	25	5,315
Scows.....	5	385
Barges, including steam.....	9	3,775
Tugs.....	18	1,100
	75	20,655
Vessels lost last season.....	105	20,441
	20	5,786

NEW INSOLVENTS.---The following names of new insolvents appear in the last Canada *Gazette*: John Irving and W. W. Hogg, Toronto; Joseph Duhamel, Montreal; W. J. Biggar, Napanee; J. C. and W. Bond, Owen Sound; R. W. Rossiter, do; Arthur Haines, St Catharines; Stephen S. Skinner, Stamford; James Russell, Nottawasaga; Francis Kebble, London; Thomas G. President—WM. EDGAR, Esq., Hamilton. Vice-President—ROBERT REFORD, Esq. (Messrs. Reford & Dillon), Mont[real]

Secretary-Treasurer—A. McK. COCHRANE, 388 St. Paul Street, Montreal.

THIS COMPANY, with machinery now in working order and in course of construction, will be able to manufacture this year FROM TEN TO TWELVE THOUSAND T[ONS] OF GOOD FUEL. Actual working shows—

I. That the fuel can be produced for $1.45 a ton, and with the improved machinery, at a much less cost.
II. That, for steam purposes, one ton of it is superior to one cord of wood, in the proportion of 31 to 27.
III. That, for domestic purposes, it is equal to wood or coal, and leaves very little ashes—about five per cent.

At the annual meeting of the Company in Montreal, it was decided to offer one thousand shares of Stock in Toronto. Mr. Isaac C. Gilmor has been appointed agent o[f the] Company in Toronto, and is authorized to receive subscriptions for the Stock.

Prospectus, Map of the Property, and further information may be obtained by addressing

THE CONNECTICUT MUTUAL

LIFE INSURANCE COMPANY,

HARTFORD, CONNECTICUT.

WOODBRIDGE S. OLMSTEAD, SECRETARY, | GUY. R. PHELPS, PRESIDENT,
EDWIN W. BRYANT, ACTUARY, | ZEPHANIAH PRESTON, VICE PRESIDENT.

LUCIAN S. WILCOX, MEDICAL EXAMINER.

Organized in 1846. Charter Perpetual.

The Largest Mutual Life Insurance Company. Numbering Over 75,000 Members.

BEING A PURELY MUTUAL COMPANY ITS ASSETS BELONG EXCLUSIVELY TO ITS MEMBERS,

ASSETS, $21,000,000.—Acquired by prudent and economical management of twenty-two years, without the aid of a single dollar of original capital.

SURPLUS ASSETS, $6,361,967—All profits divided among the members. Each policy holder is a member. There are no stockholders.

ITS DIVIDENDS—Have averaged over 50 per cent. annually. Total amount of dividends paid the members since its organization, $4,397,142.

ITS SUCCESS UNPARALLELED—It has arrived at the extraordinary condition where the income from annual interest alone is more than sufficient to pay all the losses. Total amount of losses paid by the Company, $6,868,528.

ITS RESPONSIBILITY—For every $100 of liabilities it has $154 of assets.

LAST YEAR'S PROSPEROUS BUSINESS.

Amount insured fiscal year, 1867 .....$45,647,191 00 | Income received fiscal year, 1867.....$7,530,886 19

During its last fiscal year this Company paid to its living members, and to the families of deceased members, nearly $2,000,000, and at the same time added more than four millions to its accumulated capital.

The whole record of this Company has been one of prudent management and prosperous advancement. Among the older and leading Life Insurance Companies its average ratio of expenses to income has, through its entire history, been the lowest of any.

ITS LIBERALITY—It accommodates the insured by giving credit for part premium, and grants insurance to meet all the contingencies and wants to which Life Insurance is applicable.

It issues policies on a single life from $100 to $25,000.

MEDICAL REFEREES—J. WIDMER ROLPH, M.D.; H. H. WRIGHT, M.D.

LIFE ASSOCIATION OF SCOTLAND.

Invested Funds Upwards of £1,000,000 Sterling.

IS Institution differs from other Life Offices, in that the BONUSES FROM PROFITS are applied on a special system for the Policy-holder's personal benefit and enjoyt during his own lifetime, with the option of large bonus additions to the sum ured. The Policy-holder thus obtains a large reduction of present outlay, or a vision for old age of a most important amount in one cash payment, or a life uity, without any expense or outlay whatever beyond the ordinary Assurance mium for the Sum Assured, which remains intact for Policy-holders' heirs, or r purposes.

Insurance.

Briton Medical and General Life Association,

with which is united the

BRITANNIA LIFE ASSURANCE COMPANY.

Capital and Invested Funds.....£750,000 *Sterling.*

ANNUAL INCOME, £220,000 STG. :

Yearly increasing at the rate of £25,000 Sterling.

THE important and peculiar feature originally introduced by this Company, in applying the periodical Bonuses, so as to make Policies payable during life, without any higher rate of premiums being charged, has caused the success of the BRITON MEDICAL AND GENERAL to be almost unparalleled in the history of Life Assurance. *Life Policies on the Profit Scale become payable during the lifetime of the Assured, thus rendering a Policy of Assurance a means of subsistence in old age, as well as a protection for a family,* and a more valuable security to creditors in the event of early death; and effectually meeting the often urged objection, that persons do not themselves reap the benefit of their own prudence and forethought.

No extra charge made to members of Volunteer Corps for services within the British Proviuces.

Meetings.

TORONTO BOARD OF TRADE.

An adjourned meeting of the Board of Trade to consider the insolvency Act was held in the Mechanics' Institute, April 12, the president, Mr. J. G. Worts in the chair. There was a large attendance of members.

Mr. Worts, in opening the meeting, explained its object, and stated that he had received a communication faom Montreal in which the idea was prominent that it would be better to do away with the Insolvent Act altogether.

The Secretary read the report of the Committee as follows: The committee appointed by the Board of Trade to consider the present Bankruptcy Law with the view of snggesting any alteration they may deem advisable for the protection of mercantile interests generally, beg to snbmit the following report:

Your committee have carefully considered the insolvent Act of 1864, with the amendments thereto, clanse by clanse, and have also had before them the amendments suggested on the subject by the Montreal Board of Trade.

Your Committee find that several of the suggestions of the Montreal Board are embodied in the existing Act; they also find that the present Act contains several important provisions for the examination of insolvents and the management of their estates, which are not sufficiently known to the public, and which they think advisable to retain.

They are of opinion, after careful consideration, that the ends desired by the commercial community will be better served by continuing the present law in its main features and adding snch amendments as experience may suggest, than abrogating or suspending the same. The principal provisions recommended by the committee as desirable to introduce and incorporate with the present law are—

First. The making it impossible for an insolvent debtor to assign his estate without the consent of his creditors; and,

Secondly. The power of the creditors to appoint a custodian to take immediate possession of the insolvent's estate pending an assignment being made; and,

Thirdly. The appointment of an inspector to act conjointly with the official assignee in the management of the estate.

The other amendments snggested by your committee are npon matters of detail, the most important of which is a classification of certificates in bankruptcy. They have added one paragraph snggested by the Montreal Board of Trade in relation to fraud and concealment of property. All of which is respectfully submitted for the consideration of the Board.

A. R. McMaster, *Chairman.*

Recommendations of the Committee of the Board of Trade.

"Amend 2nd clause of 1st paragraph as follows: The meeting of creditors to be called where the majority of the creditors reside. The Insolvent shall not have the power to make a voluntary assignment without the consent of a majority of his creditors.

2nd paragraph. The list of creditors in the notice of meeting to contain the residence of each creditor and the amonnt of their respective claims.

3rd paragraph. That a pro rata scale of voting at all meetings be established as follows:—One vote for each $100 claim up to $1,000, and another vote for every $1,000 additional.

That power be given the creditors at their first meeting to appoint a custodian of the Insolvent's estate who shall take immediate possession, and if necessary prepare a statement for snbmission to the creditors, with or without the assistance of the Insolvent, who if a party thereto, shall verify the same by oath to the best of his knowledge and belief. When the debtor fails to meet his engagements generally as they become due, three or more creditors representing claims of $1,000 or upwards may demand a statement of his affairs to be furnished within ten days, the accuracy of which statement they shall be empowered to test by personal inspection of the debtors books, &c. When an Insolvent has assigned his estate, the creditors shall have the power to appoint an inspector who shall be remunerated for his services at the discretion of the creditors out of the estate, whose duty shall be to advise with the assignee as to the disposition of the estate, audit his accounts, and keep the creditors informed from time to time of its position, &c. That goods in *transitu* be protected from being taken as part of the Insolvent's estate until placed in his store or actual possession. Before an Assignee is finally discharged from his dnties and liabilities, he shall mail notices to each creditor, informing him of his intention, to ask for a discharge in regard to A. B.'s estate; and if his discharge is not objected to by the inspector of the estate, he may obtain the same at the discretion of the Judge. That the Jndge shall not be empowered to give a bankrupt a discharge without the consent of the inspector on behalf of the creditors. That there be three classes of certificates of discharge, nnder which the insolvent shall rank according to the determination of the Court. Certificates of the 1st class shall be given in cases where the conduct of the insolvent as a trader, or otherwise, is not impngned nnder any of the conditions specified in the rules for the 2nd and 3rd classes. That any debtor who has lived extravagantly, or has been reckless in endorsing or in becoming security for others, or who has incurred debts without a reasonable expectation of paying them, shall only receive a second class certificate. Any debtor who, by acts of intemperance, gambling, fraud, or reckless waste of property, or who is unable to produce proper accounts of his bnsiness, shall be ranked in the third class; and his discharge shall be suspended for a period of five years. No insolvent shall be discharged whose estate shall realize less than 50 cents on the dollar unless by consent of a majority of his creditors, representing two-thirds of the amount of his indebtedness. All post-nuptial settlements to be void if made within two years of insolvency, nnless registered at the time they are made, and unless the bankrnpt can prove he had a sufficient surplus when the settlement was executed. That the insolvent be considered guilty of a misdemeanor, and liable, on conviction, to imprisonment, if he shall not, npon examination, fnlly and truly discover, to the best of his knowledge and belief, all his property real and personal;

and how, and to whom, and for what consideration, and when he disposed of, assigned or transferred any part thereof, except such part as has been really and *bona fide* disposed of in the way of his trade and business, or laid out in the ordinary expenses of his family; or shall not deliver up to the assignee all such part thereof as is in his possession, custody or power, except such portion as may be exempted; and, also, all books, papers and writings in his possession, custody or power, relating to his property or affairs." A discussion ensued, in which a number of members joined. The consideration of the report was finally adjourned for a week.

MONTREAL CITY AND DISTRICT SAVINGS BANK.—The annual meeting was held in Montreal on the 6th February. The institution has been in operation twenty-three years. The Directors state that the net profits of the year were $20,781.62, out of which $6,035 was distributed to the poor making $56,575 in all given to the poor. During the year, $2,975,000 were received from depositors at the counter, and $2,720,000 were paid out to depositors, and besides the sum of $80,270.76 as interest. This large amount of business, transacted with a daily average number of over two hundred persons at the counter, has forced upon the Directors the necessity of making preparations to obtain a larger and more commodious building for the transaction of business; and a lot on the corner of St. John and Great St. James streets has been secured, with a frontage on those two streets of one hundred and twenty feet.

Statement of the affairs of the Montreal City and District Savings Bank, the 31st Dec., 1868:

DR.

To amount due Depositors	$1,861,574 55
To amount due to minors and others on the property of the Bank	5,337 94
To amount due to sundry persons not depositors	36,247 48
To amount of Reserve Fund, after paying all expenses and making the Annual Donation to Charitable Societies	148,222 61
Total	$2,051,382 58

CR.

By City of Montreal, Provincial and Champlain and St. Lawrence Railroad first Mortgage Bonds	$457,696 00
By Bank Stocks, viz., La Banque du Peuple, City Bank, Bank of Montreal, Ontario and Merchants' Banks	110,796 92
By Loans on short dates, with the collateral security of Bank Stocks and Bonds, such as required by law	709,834 92
By Property occupied by the Bank, and office furniture	25,227 45
By amount due on sale of portion of the above	2,453 32
By deposits on call and interest in Banks of the city	745,373 97
Total	$2,051,382 58

E. J. BARBEAU, *Actuary.*

The election of officers was then proceeded with, when the following gentlemen were declared unanimously elected:—

As Managing Directors for the term of office required by law—Messrs. Deslisle, Workman and Larocque. As Auditors for the ensuing year—Messrs. W. Bristow and C. T. Palsgrave. As Honorary Directors—Messrs. W. H. Hingston and Maurice Laframboise.

At a meeting of the Managing Directors, held subsequently, the Hon. Henry Starnes was elected President, and the Hon. L. H. Holton, Vice-President, for the current year.

MONTREAL PERMANENT BUILDING SOCIETY.—The eleventh annual meeting was held in Montreal, on the 6th inst. The annual report states that the demand for money during the year has been sufficient to absorb the payments as received.

The Permanent Stock is	$184,750 00
The Running Stock is	3,730 81
Total paid up	$188,480 81

The loans made during the year were 70 in number, and in amount $85,929 95; making a total since organization of $738,794 00, of which there has been paid $461,451 07; leaving a balance of $247,342 93. Two half-yearly dividends of four per cent. have been paid to holders of Permanent stock. The same rates have been added to the Running Shareholders' accounts, to each of whom a statement has been sent. A sum of $4,665 07 has been added to the Rest, which now is $19,578 90. The following gentlemen retire, but are eligible for re-election:—G. H. Frothingham, R. Esdaile, A. W. Ogilvie, and Charles Alexander.

HENRY THOMAS, President.

The Report was submitted and adopted, and the retiring Directors and the Auditors were re-elected.

QUEBEC PROVIDENT AND SAVING'S BANK.—The twenty-second annual meeting of this Institution was held in Quebec, on the 20th March; J. Greaves Clapham, occupied the chair, and Mr. G. Veasey, acted as Secretary. The Report says,—In submitting their twenty-second Annual Report and accompanying cash statement, the Trustees have again great pleasure in announcing the satisfactory position of the Bank. In consequence thereof, they have voted the sum of $2,500 to the following charitable institutions: Jeffery Hale hospital, $1,000; St. Bridget's asylum, $500; Finlay asylum, $500; Ladies' Protestant home, $500. Total—$2,500. The deposits during the year have amounted to $348,031.40, and the drafts to $342,630.66, leaving a balance due depositors of $548,445.04, while 339 new accounts have been opened during the twelve months. The following gentlemen were elected directors for the ensuing year:—Messrs. C. Wurtele, J. S. Fry, W. Hossack, D. McGie, H. S. Scott, J. Musson, Weston Hunt, T. Norris, M. G. Mountain, L. Massue, M. Stevenson, W. Walker, A. F. A. Knight.

A general meeting of the stockholders of the Erskine Slate Company was held at Waterloo, E. S. on the 23rd ult., at which meeting A. B. Parmalee, John Erskine, H. L. Robinson, James Irwin, and John Williams, were elected Directors of the Company; and on the 22nd instant, at a meeting of Directors, the following officers were appointed for the ensuing year:—A. B. Parmelee, President, W. G. Parmelee, Treasurer; J. F. Leonard, Secretary; and John Erskine, Managing Director.

Insurance.

FIRE RECORD.—Stratford, April 4.—A fire originated in a building on the market square, owned by John Sayer and occupied by H. Hammond as a grocery; the flames spread to Thomas Stoney's saddlers shop, Mrs. Patterson's shop, H. Gibson's confectionery store and the *Herald* office. A local paper says:—Very little of Mr. Stoney's stock was saved, and he is a heavy loser by the fire. The principal portion of Mr. Hammond's and Mrs. Patterson's goods were removed." Mr. Sayers had no insurance on his building, his loss will be about $900 or $1,000. Mr. Stoney is a loser to the extent of about $2,000. No insurance. Mrs. Patterson had no insurance on her stock, but the principal part was saved. The goods of Mrs. H. Gibson, W. Down and D. Davis were much damaged by removal. The printing material of the *Herald* was subjected to a hasty removal; much of the type was scattered on the street, and cases thrown into "pi." The sta[tion]ery was much damaged, and the building [was] gutted. Mr. Robb's loss will be between $70[0] $800, which is partially covered by insuran[ce] the Waterloo Mutual. There was a large r[e]sentation of both fire companies on the gr[ound] and to their endeavors, in which they were assisted by the citizens, is due the saving o[f] principal business part of the town from th[e] stroying element.

Durham, Ont., April 7.—Mrs. Burt's f[rame] dwelling was destroyed; the fire caught f[rom] stove-pipe.

Adelaide, Township, Ont., March 30.—[The] of Thomas Harris, on 3nd con., including tents. Loss $400; no insurance. The fire o[rig]ated in the kitchen.

Lindsay, Ont., April 9.—House of Alex. [—] and out buildings; said to be insured for $1,[000]

Hamilton, April 7.—A fire broke out i[n] cellar of E. & G. Magill's hardware store, [but] was extinguished; damage, chiefly by water, [to] $1000; insurance on stock, $48,000, in eigh[t] ferent compaies, of which the Commercial [has] had $15,000; damage to building trifling. [The] fire is supposed to have been caused by the e[x]sion of a lighted lamp in the cellar.

Wyoming, April 12.—A destructive fire occ[urred] here early on Sunday morning, resulting i[n] total destruction of George Taylor's oil refini[ng] tablishment, together with about 380 barr[els] refined oil, and 700 barrels of crude. Th[e fire] was first discovered about half-past three, an[d] then confined to the still houses, which left [no] hopes of saving the other parts of the works, [as] a pipe in the side of an elevated crude oil [tank] came out, which caused the oil to flow in a s[tream] directly into the fire. The flames then ra[pidly] spread over all parts of the establishment. [The] estimated at $10,000.

Thorold, April 12.—An unoccupied house [owned] by James Taggart, was burned last night be[tween] nine and ten o'clock. Fully insured.

Waterdown, April 12.—The Methodist [New] Connexion Church here was burned down y[este]day morning about nine o'clock. The fire is [sup]posed to have originated from stove-pipes. [No] insurance.

Brooklin, April 10.—A telegram says: F[ires] were discovered this morning at 7.30 o'[clock] issuing from the steam planing mill and bee [hive] factory here, belonging to Nelson Thomas. [The] building contained about 1,000 bee hives, fi[nished] and in course of construction; also a quant[ity] planed lumber and machinery, all of which [was] consumed. Loss about two thousand five [hun]dred dollars. The fire originated from a sto[ve].

Clifton, April 12.—A telegram says: [At] 2.30 on Sunday morning a fire was discover[ed] rear of Roslis' barn, which spread rapidly [to] adjoining buildings, destroying Roslis' hotel, [Mul]heim's and Bull's taverns, also, Mulheim's [and] Three valuable horses, the property of Mr. [Roslis] were burnt in the fire. All the buildings [were] insured. Loss about $8,000.

GALT FIRE BRIGADE.—The annual re[port] the Galt Fire Brigade, states that it was onl[y] ed out twice during the year, and both fire[s] extinguished without their assistance and [with] very little damage. The different companies [num]ber 112 men against 108 last year. The ex[pend]rure for the year was $581.22, principally in[curred] for new clothing for the men.

FIRE LOSSES IN THE U. STATES.—The [aggre]gate losses by fire for the three months of Jan[uary] February and March, 1869, throughout the U[nited] States (not including those under twenty [thou]sand dollars) are considerably less than th[ose] the corresponding months of 1868, althoug[h the] losses of March in the current year exceed t[hose] March, 1868, by nearly half a million of d[ollars] Taking, however, the three months' total, w[e find] that the losses of the past three months o[f the] present year and of January, February and M[arch] of 1868, the result is as much as three mi[llions]

hundred and seventy-five thousand dollars in of 1869, a circumstance of the greatest satisn. The following table will exhibit the ence more concisely:

	1868.	1869.
s in January	$5,494,000	$2,294,000
s in February.....	4,399,000	2,637,000
s in March.....	2,405,000	2,892,000
Total.....	$12,298,000	$8,823,000

E NEW ENGLISH ASSURANCE BILL.

e following is a copy of the bill introduced r. Cave, into the House of Commons on the March. We give it as published in the *Insur-Record*:

ereas it is desirable to provide for the secur- policy holders in life insurance companies quiring publicity of such companies accounts: it enacted by the Queen's most Excellent ty, by and with the advice and consent of ords Spiritual and Temporal, and Commons, s present parliament assembled, and by the rity of the same, as follows :

That after the passing of this act every com- issuing Life policies within the United King- hall, within sixty days from the first of Jan- n each year, deposit returns with the Regis- f Joint Stock Companies, in the forms set n the Schedules attached to this act, showing, the income and expenditure of the company e past year:

The balance sheet of the company for the past

The new business transactions of the company e past year.

That every assurance company issuing life s within the United Kingdom shall be re- to have an actuarial report prepared once ry ten years, or at such shorter intervals as e provided by the deed of settlement or s of association of the company for an act- investigation into its condition, and that and so often as such actuarial investigation ake place a return, showing,—

The instructions on which the actuarial is prepared :

The table of mortality on which the valuation d;

The rate of interest assumed: and

The amount of margin of premium income d for future expenses and profits ; together certified copy of the actuarial report itself, e deposited with the Registrar of Joint Stock nies within twenty-one days after the said shall have been submitted to the directors company.

When an amalgamation shall take place be- any companies or when the business of one ny shall be transferred to another company, mbined company or the purchasing company within ten days from the date of the com- of the amalgamation or transfer, respect- leposit with the Registrar of Joint Stock nies certified copies of statements of the and liabilities of the companies concerned amalgamation or transfer, together with fied copy of the agreement or deed under such amalgamation or transfer is effected, rtified copies of the actuarial or other re- pon which such agreement or deed is found- d that the agreement or deed of amalgama- transfer shall be accompanied by a statu- claration, made by the principal manager e chairman of the board for the time being, very payment made or to be made to any whatsoever on account of the said amalga- or transfer is therein fully set forth, and other payments beyond those set forth have ade or are to be made either in money, , bonds, or other valuable securities with the knowledge of any parties to the t.

4. Any refusal or neglect to comply with the requirements of this act shall be a misdemeanor, and shall subject the directors, manager, and secretary of the defaulting company to a penalty of twenty pounds sterling for every day beyond the several dates herein-before fixed during which the requirements of this act shall not be complied with ; and it shall be the duty of the Registrar of Joint Stock Companies to sue for such penalties, and to pay them into Her Majesty's Treasury.

5. This act may be cited as The Life Assurance Act, 1869.

PEAT.—The *Canadian Monetary Times* of February 25th, tells us with respect to the Anglo American Peat Company, that the Company seem to have gone to work in earnest. "A railway a mile and a half long has been built by them from the Welland Canal to their property, and a peat machine of improved character was constructed specially for their operations. Their experience thus far is that they can produce peat and deliver it on the banks of the canal for $1.45 a ton, which can be sold at $3.50 a ton, the same material being sold in Montreal at $5 to $5.50."

Peat must look sharp and be economical, or it will be beaten by coal, when the Intercolonial railway is made. Nova Scotia produces the finest coal, and in large quantities; upon a line not overcrowded with traffic, it will go long distances at a profit. It has never yet been proved how far coal can be carried by railways under favourable circumstances. It depends upon the quantity that can be conveyed in one train at from 12 to 15 miles an hour. If a train of cars could take 400 tons leisurely, and without interruption, the coal could be carried at a charge of ¼d. a mile a ton, and leave a profit of about 50 per cent. The train mile receipt would be 8s. 4d., which is a full amount, and would admit of half being netted as profit At a charge of only ¼d. per ton per mile coal would travel nearly 1,000 miles, and coming on the Grand Trunk railway at both its ends, it might be found at all its stations.—*Herepath's Journal.*

—Mr. James Goodwin has been elected President of the Connecticut Mutual Life Insurance Company,

—Messrs. Lawson & Bros., of Hamilton, submitted a statement of their affairs at a meeting in this city, showing assets amounting to $39,500 and liabilities of $48,609 ; deficit $9,109.

THE BANK CHARTER QUESTION.

THE PROVINCIAL NOTES.

VII.

By the issue of Government notes, to which the law gives a forced circulation, we have already entered on a career which has been full of disaster in many countries both in the old world and the new. The Provincial note is a legal tender for the payment of all debts; and though it is nominally redeemable in specie it does not differ in this respect from the paper issued by so many Governments, the value of which sunk in time to a mere nominal figure. France, Spain, Austria, Russia, Sardinia, Naples and the States of the Church have all in their time gone through a like experience. We are only following in their footsteps, when we should have been warned by their example so fatal and so full of instructive lessons. We have in truth commenced with greater boldness than many of these nations displayed at the outset; for we began by declaring the Provincial note to be of equal value with gold, and no matter how much it may become depreciated by excessive issues, or some other cause of Government discredit, it will still be a legal tender for the payment of all debts.

It was at one time the design of the Government to supersede the bank note circulation entirely by Provincial notes. One thing was wanting to enable this arrangement to be carried out, and that was the consent of the banks; a consent which to their everlasting credit be it said was, with one solitary exception, withheld. If the Government had succeeded in this essay it is probable, almost certain, that cash payments would have ceased ere now. There is no example, we venture to say, of cash payments being long preserved on the strength of a specie reserve so low as that required for the Provincial notes—one-fifth of the amount in circulation. It must always be difficult to determine what minimum of specie will, at all times, be sufficient to meet the demands of convertibility. Something must depend on the credit of the issuer, which is not, and cannot, especially in the case of a Government, be always the same. There have been periods when the Bank of England and the Bank of France required for the maintenance of convertibility about half as much gold as they had issued notes. The banks of New York were, at one time, obliged to suspend specie payments with a reserve of bullion in their vaults equal to half their note circulation. But it may be supposed that there is some magic in the credit of a Government which will exempt it from the laws to which individuals and corporations are liable. It has often proved true that the credit of a Government has, at the first commencement of issues of paper money, had the fatal effect of causing these promises to circulate far above their real value. But the period of over-confidence once passed, corresponding depression and discredit follow; and all experience shows that a decline in the credit of Government paper money is more rapid than that of any other depreciated paper. All who take such paper in its declining stage suffer a loss on the depreciation. There is, perhaps, no way in which a community can be so effectually robbed without being fully conscious of the extent to which it is suffering.

Whatever scheme be proposed this Session it is not probable that the Provincial notes will be suppressed. They are much more likely to be made to perform the functions which greenbacks now perform in the United States. Nothing would be easier than the transition from the Provincial note, with an enforced circulation, payable in specie, to the Provincial note performing all the functions of a legal tender, and not convertible i specie. It is already pretty well underst that the Government scheme of currency s to be proposed to Parliament will be in cordance with the recommendations of King's circular—a modification of the Nati banking system of the United States. B will be held out to lure the banks into an resisting acceptance of this scheme. I probable that one, or perhaps two of th will fall in with this fatal plan, but it is t hoped that the majority will hold out fir against it. We are aware that a suspen of specie payments—for that is what it m —may be made to present an attractive pearance in the eyes of certain bankers. is calculated that during the long suspen of specie payments in England, the Ban England saved £300,000 a-year in intere bullion which it would otherwise have obliged to hold. And the holding of a l amount of interest-paying securities is without its attractions to the banker, es ally if he does not stop to consider that l exchanging a large part of his capital fo mere promises of the Government. Be Sir Robert Peel's Act was passed it was f that a necessity existed to curtail, by law amount of Government securities whic Bank of England might hold. In Septen 1839, the bullion in the vaults of the was below £3,000,000, while it held secu to the amount of nearly £26,000,000. Robert Peel's Act provided that notes sh not be issued against securities to a gr amount than £14,000,000.

Here is the bait that will be offered t banks. They will be told that by maki advance to the Government of a large p their capital they will be able to perfor double operation of drawing interest o securities purchased, and of making a on the notes which they can issue the This may doubtless be done if we are t sort to a suspension of cash payment not otherwise.

Two contrivances have been resort for preventing the Provincial notes co for redemption. These notes were, at divided into two classes, one of which i able at Montreal, and the other at To latterly, however, a third class has issued, payable at Halifax. From th the notes payable at Montreal were iss Toronto, those payable at Toronto issued at Montreal. The object of this device was very plain. It costs a quar one per cent. to transport notes fro city to the other, and the mode of i the Provincial notes is equivalent to ciating them to that extent.

The other contrivance is to lock up siderable amount of Provincial Notes

ious Banks, under pretence of taking urity for the adjustment of accruing ances between the Banks. Some of the nks hold in this way as much as $150,000 Provincial notes. There is some analogy ween this practice and that by which Scotch Banks effect a settlement of ances. Each of the Scotch Banks holds that purpose a certain amount of Exquer bills. These bills bear upon them proofs of their belonging to the Edingh Exchange, and they are used only for settlement of balances. The Exchequer differs as widely as possible from the vincial note. It is not a legal tender, can only pass from hand to hand volunly. The Provincial notes kept for the lement of balances, are placed where they not be presented for redemption in specie. this shows an inclination to do everyg possible to exempt these notes from all hands, ordinary and extraordinary, of vertibility, and is far from being a cheerprognostic of the future.

OVINCIAL INSURANCE COMPANY.

n June 1861, Mr. Cassels was appointed hier of the Bank of Upper Canada, and mediately commenced a thorough investtion of its affairs," and prepared a report hich was intended to satisfy the public d as to the perfect solvency of the Bank." 862 the directors congratulated the shareers "on the improved condition of the k," and were satisfied "in having been to declare a dividend of three per cent. he half year ;" as notwithstanding bad s, they were sure "they had maintained und and firm position." In 1863 the tors again assured the shareholders that e condition of the Bank was steadily imring," and Mr. J. H. Cameron moved a ution "for the information of absent holders," which expressed "satisfaction the affairs of the institution." In 1864 is stated "with perfect truthfulness and riety that this Bank is now in a sounder, hier and more satisfactory position than s for four years." Fifteen months after last words were given to the public the suspended. Thereupon, to cap the ax of absurdity, a statement of affairs submitted by the Board which showed a lus of $1,488,862. At the last meeting ose interested in its affairs it was admity the trustees that if the Government ced the payment of its debt from the , not only would every penny of assets be bed, but it would be necessary to fall back e double liability. It is possible then irectors to be deceived, and to deceive ublic, and it is equally possible to rear y surplus-fabric on a quicksand.

The Manager of the Provincial has published an advertisement in the Toronto papers which has attached to it the signatures of the Directors. This advertisement is in the form of a letter, and is intended to be a reply to our remarks on the position of the Company. The Directors are made to say that they feel it due to the public to state "the correct financial position of the Company, and to express their confidence in its complete ability to meet all engagements with every claimant and policy-holder, whether present or prospective." This is fair enough, but the Directors of the Bank of Upper Canada were just as amiable, just as respectable, and just as trust-worthy as the Directors of the Provincial, and, unfortunately, their assurances and expressions of opinion were just as strong as those contained in the Provincial's advertisement. The Directors of the Bank of Upper Canada had a large stake in the institution over which they presided, which is more than can be said of some of the Directors whose names appear in this advertisement. Messrs. Howland, McMaster, Campbell, and Fulton, by an extraordinary coincidence, are the happy possessors of just twenty shares a piece of the Provincial Stock. The coincidence, we say, is extraordinary, for we happen to know one prominent citizen to whom just twenty shares were offered, as a gift, if he would allow his name to be numbered among the Provincial's Directors. Taking it for granted, however, that these twenties were paid for, each of these four gentlemen would have $220 invested in a concern out of which he draws, in fees, about $250 per annum, besides a share of the three per cent. dividend. There are pickings also : for instance, one Director got fifty dollars for settling a loss lately, and another Director got forty dollars for negotiating the mortgage which now encumbers the Company's head-quarters. There are waifs, also, such as per centages on business secured through the zeal of Directors, just as an Agent would get his commission. So that the Directors have every inducement to keep the machine running, and restrain inquisitiveness. The Manager very naturally desires to be even with his Directors, and draws a commission of two-and-a-half per cent. in addition to his salary. Of course it is his interest to make the profits appear as large as possible, as the better the exhibit, the higher his pay. This commission yielded him last year $800, over and above his $2,400 salary. The reason he got so much was because his statement shewed last year a net profit of $35,549. Just think of an institution which paid a spasmodic dividend of three per cent, giving its Manager two-and-a-half per cent. on the net profits of the year, in addition to a salary of $2,400, and distributing among its Directors between two and three thousand dollars ! The worst of it is that this costly Manager is notoriously unfit for his position, and holds it only by trickery; and we say it with regret, but we say it emphatically, since the truth must be told, by equivocation. Were Mr. Crocker a young man we should be compelled, in the public interest, to bring him face to face with a record which would bring the blush of shame to any honest countenance; but we extend to him a charity, and a consideration, which his language respecting this JOURNAL at various times and places, has fairly disentitled him to receive. If his Directors are satisfied with him, well and good. On them be the responsibility. We do not say that the gentlemen constituting the Board of Directors are not honest upright men, but we do say that in a matter in which the public have such a deep interest, they exhibit, either culpable ignorance, or amazing carelessness. And now for our reasons.

In our article on the Provincial Insurance Company to which so much objection has been taken by the Directors, we did not pretend to give the exact position of the Company, for we had not the means of doing so. What we did endeavor to do was to give a general idea of its standing. We asserted that there were losses unpaid, to the extent of about $40,000 clamoring for payment. Is that correct? The Directors say, "at this moment, there not only is no adjusted loss overdue and unpaid, but there is no unadjusted loss in respect of which there is not sufficient ground for delaying the settlement for further proofs or disputing the claims altogether." We have heard of a man who on giving his note for a debt, exclaimed with refreshing joyousness, "Thank heaven, that debt's paid!" There are a number of suits pending against the Provincial. The Desbarats loss was settled by drafts at thirty and sixty days, instead of by cheque as was so triumphantly asserted in the newspapers, and if we are not misinformed the first draft had to be met by discounts raised on the faith of the Company's Halifax agency notes. The Company's accepted drafts are only negotiable at a ruinous discount. In one case, an accepted draft for $800 at thirty days was offered for discount in Toronto to parties who should know the Company's affairs, and the only offer made for the draft was at the rate of thirty per cent. discount. Another draft of $363 at thirty days was offered to the Company itself for $300 cash and declined, and every effort to part with it at this shave failed to find a purchaser.

The Directors are of opinion, that they have a surplus of $87,356; we are of opinion that as matters now stand there is a deficit of $94,047. The difference between us is not slight. In order to make up the surplus, the

Manag:r first casts out of the debtor side of the account an item of $75,000 which we set down as a provision for re-insurance, but which the Manager calls "a mythical liability," and then ignores the $89,738 of paid up capital. Were we right in charging the Company with a sum such as would re-insure the business in case of stoppage? The Manager of the Provincial is an actuary, at least in name, and should be disposed to yield to actuarial authority on a matter of this kind. He calls a re-insurance fund "a mythical liability." Mr. Barnes is Superintendent of the Insurance Department of the State of New York, and by the laws of the State is empowered to withdraw the license of any Insurance Company whose position is not sound. All the Fire Insuranee Companies doing business in New York have to charge themselves, as a liability, with the amount required to re-insure all outstanding risks at an average of 50 per cent. of unexpired premiums. In one of his Annual Reports, Mr. Barnes states: "The question of what amount "should be charged as a liability to a Marine "Company as a re-insurance fund for out-"standing risks, is very important in stating "the condition of such a Company. In "accordance with the recommendation of "the Board of Underwriters, and the "opinion of the soundest and most expe-"rienced marine underwriters, the reinsur-"ance reserve has been fixed at 100 per cent. "of the full amount of premiums received on "unexpired risks or policies. All the Marine "Companies are now charged with this "amount, and also the Fire Companies em-"ployed in marine insurance, on their marine "and inland risks."

The Insurance laws of the State of Massachussetts are explicit on this point—"in "making up their annual statement they "(the directors) shall be required to charge "the company only such portions of the cash "or notes received on policies which are un-"expired or would be requisite to reinsure "all outstanding risks." That is, the amount requisite to reinsure all outstanding risks is to be considered just as much a liability as the unpaid losses and charged as such. According to the manager of the Provincial Insurance Company of Canada all this is wrong; the experts across the lines have compelled their 164 fire and marine insurance companies to charge themselves with "a mythical liability," and actually have the audacity to restrain by statutory enactment, the declaration of dividends until that "mythical liability" is first deducted from the Cr. side of the account! Still worse if the financial condition of a company will not admit the deduction of that "mythical liability," the Superintendent walks into the defaulters' office, stops business, and levies contributions on the stockholders until the "mythical liability" takes shape and substance. Verily, Jonothan is a simpleton! In this matter we are simple enough to coincide with Jonothan; so supported on either side by Superintendents Barnes and Sandford, we take the liberty of replacing an item for reinsurance among the liabilities of the Provincial. We have English precedents also. For instance, the Lancashire has a fire reserve of £49,000; the North British set aside one third of the fire premiums, £138,514, of the past year, as a reserve, but the point is so clear that it is idle to enlarge upon it.

The Manager has made the Directors say some very absurd things, but the most absurd of all perhaps is this "a reinsurance fund of $75,000 is double the sum that would be necessary." According to their own statement the premium income is $200,000, of which $100,366 (which was the sum of marine premiums last year) may be taken as on marine policies and $100,000 as on fire policies. According to the American practice, 50 per cent. of fire premiums and 100 per cent. of marine premiums are taken to constitute a reinsurance fund. To say that $37,-500 would reinsure the Provincial, its premium income being as above stated, is such absurd nonsense, that we wonder at the stupidity which could have even suggested such a thing, and the crass ignorance which could have endorsed it.

We fearlessly assert that no respectable Insurance Company would assume its outstanding risks at the same rates at which they have been taken. This Company has got the very refuse of the insurance business of this Province, and the increase of its business is due to the fact that the English and American Companies have withdrawn their agencies from country towns or ceased to take any but first class risks.

The Manager seems to think that we should have taken the current income for the year as an asset. Perhaps we should, but we might just as well have gone ahead a little further and taken the income from premiums for five or ten years yet to come and used it in the same way. A *reductio ad absurdum* would be to add $70,000, the "net profits" of 1867 and 1868, to the $200,000 current income of 1869 and ask the Com'y to show the money.

The Manager points triumphantly to the fact that no portion of the $470,760 subscribed capital has been forfeited. According to the Company's statement of June, 1867, the subscribed capital was $533,940, of which $97,889 was called in. The statement of June, 1868, shews the subscribed capital at $470,760, of which $89,738 was called in. So that between 1867 and 1868 stock to the amount of $63,180 was forfeited. If the work of forfeiture ceased then, it was because calls were not pressed.

It is claimed that the following are Company's assets:

Balance in Bank and Agent's hands	$48,427
Investments	5,250
Real and personal property	22,308
Good debts	5,247
Bills receivable	48,927
Calls in process of payment	2,908
	$133,068

Taking this as correct, the Comp account with itself would stand—

Dr.—Losses	$39,378	
Mortgage on office	8,000	
Debentures to Church Society	15,000	
Re-insurance fund	75,000	
Paid up Capital	89,738	
		227,116
Cr.		$133,068
Deficit		$94,047

Were this Company doing business in States, it would lose its license until impaired capital should be made good. H ever, let us pass to its position as regards public.

One is struck by the quaint book-kee terms which characterize the Manager's s ment. He is careful to club the balanc bank and agent's hands together. Does word balance mean cash? If so, how muc the bank? About the 27th of March las bank account was overdrawn. Last the balance at agencies was $35,665, so progress has been made in getting the m in. Though that amount was out in ag hands the petty sum of $8,000 was raise mortgaging the Comp'ys office, which we pose pays interest at the rate of ten per If the Manager would acknowledge tha $48,427 means bad debts made thr agents, we could understand why a mort was necessary, but even then we should anxious about the net profit of $35,000. speaks afterwards of "good debts $5,2 As a matter of curiosity, we should li have seen the Company's accountant ferr out the details of this item. The investm referred to are we suppose a Brantfor benture, and Detroit and Milwaukee bo Our old friends, "bills receivable," ar again doing duty for $48,927 63. Last they represented $47,499 28. We fanc of these that were available have bee vulgar phrase, "shoved up the spout," e in the way of discounts or as collaterals.

The next in order is "calls in proce payment." What is a call in process of ment? Two years ago the Company ven ed to make a call on the stock. Last nothing was credited to calls so we take granted that the calls were not then in cess of payment. If it takes two years these calls to win recognition in the ba sheet under the equivocal title mentio how many years will it require to com

e process of payment ? We commend to countants this new description of asset. here are "sundry debtors $40,013," who peared to such advantage in the last statement ? Surely the manager must have forten this valuable asset. Under these susicious circumstances, we are compelled to ubtthe balances, the investments, the calls, d to regard as worthless, for immediate nvertibility, the bills receivable The account would therefore stand :

sses	$39,378	
ortgage	8,000	
bentures	15,000	
insurance Fund	75,000	
		$137,378
Cr.		
sh (say)	$1,000	
posit	16,666	
al and personal prop'ty	22,308	
od debts	5,247	
		45,228
Deficit		$92,150

We have again and again called the attention of the Directors to the wrong they do mselves and their policy holders in allowthe Company to drag out a miserable id-to-mouth existence when there is every ucement to place it on a sound footing. stock is worthless, its credit at the Bank hing, it is looked upon as a pauper by all versant with insurance matters, and is ated as such. If the subscribed capital, 0,760, is a good asset why is it not called instead of raising money at ten per cent. nortgages and debentures. Why borrow ,000 at ten per cent. while $48,000 is wed to lie in the hands of agents ? Why p up law costs in litigation to gain time n $70,000, the "net profit" of two years hand ? Why be dependent on banks for ney to pay the current expenses ? When erchant is compelled to resort to such exdients, he is set down as one going to ruin. Bore the public will be satisfied with such tements, an independent investigation uld be made; and with such skilled accountts as Mr. J. H. Mason, Mr. W. T. Mason, M. Charles Robertson and Mr. Lee, whose vices could possibly be secured, we do see why the present uncertainty should ermitted to continue.

---

most important economical question is lved in the competition now existing betn lines of railway and water communicaon both sides of these lakes. The great rican roads running between Chicago and York, in their keen rivalry for the imge trade passing between these cities both mmer and winter, have reduced rates to w a point that freight is now carried al- as cheaply as by water. The water for grain from Chicago to Buffalo last season averaged as follows: wheat, 14 cents per 100 lbs ; corn, 19 8-10 cents per 100 lbs ; oats, 15 cents per 100 lbs. Canal rates from Buffalo are estimated at 23 4-10 cents per 100 lbs ; making a total average rate from Chicago to New York, *via* lakes and canal, including 3 cents for insurance, warehouse commissions and transfer at Buffalo, of 40 cents per 100 lbs., or $8.00 per ton. It has been suggested in the interest of the railways that the different kinds of freight might be arranged into classes paying $7, $8 and $9 per ton during the season of navigation, and $9, $10 and $11 per ton in winter, making an average of $8 in summer, and of $9 per ton throughout the year.

A writer in a western paper, demonstrated by an analysis of the inward and outward trade of Chicago, that it could all be handled by a railway with a double track for freight trains, and another for passenger trains. In fact this writer goes so far as to say that the capacity of such a road would be equal to five times the volume of that trade. Trains would be run at a low rate of speed, say six or eight miles per hour, and with the double track could run within fifteen or twenty minutes of each other. The capacity of such a road would be equal to five canals in this latitude, as the speed of the train is three times that of the canal movement during navigation, and the railway would have five months of winter traffic in its favor.

Even with the present intermixing, and often necessary conflict, of freight and passenger traffic, these American roads have carried at rates almost as low as those charged by water. If this can be accomplished under existing circumstances, it is not too much to expect that when the great improvements and the increased economy of which railway transportation is undoubtedly susceptible, are realized, freight will be carried quite as cheaply as by our present mixed system of inland navigation. The idea is a most important one, as it points the direction that our proposed public improvements should take for opening up the country, and extending facilities for easy ingress and egress to the newer and more unsettled districts.

—Sir Edward Watkin retired from the Presidency of the Grand Trunk on the 23rd of March, and Messrs. Blake and Young retired from the Direction on the same day. Messrs. Grosvenor, Hodgkinson, Gillespie and Graham Menzies succeeded these gentlemen on the Board.

—We learn by telegraph that the steamer "Calumet" was burned last night at Portage du Fort. The boat was insured for about $9,000 in the British America and the Western Insurance Companies. She was the property of the Union Forwarding Company. Value, $14,000.

LONDON CORRESPONDENCE.

(From Our Own Correspondent.)

London, March 25, 1869.

Yesterday the shareholders of the Hudson's Bay Company assembled to consider the terms of settlement proposed by Earl Granville. As might have been expected the meeting was by no means favorable to an acceptance of these terms. Many shareholders think that they have been badly treated. Their grievance is a two-fold one. In their opinion, Canada ought to buy them out on their own terms; failing this, the directors of the Company should give effect to the policy ennunciated in 1863, and hitherto shirked. They consider that the re-constitution of the Company in 1863, and the increase of the capital to the extent of a million and a half sterling, were sanctioned and supported subject to the application of the fresh funds to the colonization of the North West. Having been disappointed in this matter, their next hope was that what the directors had failed to accomplish the Government of Canada would undertake, and that prior to commencing operations, the Canadian Government would satisfy the Company's claims. Believing as they do, that a million sterling is the smallest sum which could be accepted, they naturally regard Lord Granville's proposal to compensate them with a cash payment of three hundred thousand pounds as little better than a mockery. One of them told the meeting that his first impression was that the whole affair was a hoax. Although Sir Stafford Northcote, the Governor, Sir Curtis Lampson, the Deputy Governor and their colleagues were unanimous in recommending acquiescence in the proposal, yet the majority were in favor of adjourning the decision, in the expectation that something might yet occur to turn the current into a more propitous course. It is not impossible that the end will be a reference of the question to the Judicial Committee of the Privy Council. Nearly all the shareholders believe in the validity of the charter; hence, they have no fear that it can be successfully impugned. They argue that, if a confident tribunal pronounced the charter to be a binding document and if its powers proved to be as comprehensive as has been supposed, the position of the Company would be strengthened and that it might then conclude whatever arrangement it chose with Canada. On the other hand, there are persons whose impartiality cannot be questioned and whose capacity for pronouncing a valid judgment is acknowledged, who maintain that the charter is legally worth nothing more than the parchment on which it is engrossed. For my own part, I hold that the Judicial Committee of the Privy Council would pronounce a decision adverse to the Company's title. Yet it is desirable that the dispute should be settled, if possible, without recourse being had to arbitration or litigation. It is now twenty-three years since the Company first made a formal claim for compensation by the United States for the loss incurred owing to having to abandon its settlements in Oregon. I think the present case would be determined more rapidly. Still, there might be delay of a year or two. During this time the completion of Confederation by the incorporation of British Columbia into the Dominion would be postponed. The shareholders assemble again a fortnight hence, when the question will be put to the vote. I hope that the result will be the approval of the proposed arrangements.

The continuous fall in the value of shares in the Electric Telegraph Companies is attracting public notice. A year ago these shares rose nearly as rapidly. As soon as it became known that the Government meant to purchase the lines of telegraph throughout the country, the price of the shares increased enormously. This was due to the speculators having inferred that the bargain about to be made would have been most advantageous to the companies. Had the Administration of Mr. Disraeli continued in office their

notions would probably have been verified to the letter. The present Government, however, is not inclined to squander public money, and are resolved that the telegraph companies shall not be [illegible] paid. In consequence of this, the shares are receeding from the high point which they touched.

Attempts are constantly being made to persuade the investing portion of the public to embark in new undertakings. The most successful of these have been the companies formed to lay submarine telegraphs; yet, even as regards such companies enthusiasm has not been excited. A new enterprise has just been announced which it is thought may be considered as the type of a sound investment. This is a company formed to purchase a freehold property at Trowville, a fashionable watering place in Normandy. The peculiarity is that there is no share capital. Mortgage debentures bearing interest at the rate of 7 per cent. are offered to the extent of £400,000. Now, a "mortgage debenture" may sound better than a share, yet the difference in name does not make any difference in fact. It is said that should this venture be patronized by the public, that many offers of a similar kind will be brought forward.

Since the introduction of a Bill into the House of Commons relating to life assurance, the subject has been canvassed in several journals. Statements are made which, if true, ought to prove beneficial as warnings. In one newspaper it is said, for instance, that some sixty or seventy millions sterling of the present aggregate of sums insured on lives in the United Kingdom are not worth more than sixpence in the pound. A correspondent who made inquries as to the status of one assurance company which had attracted his attention, discovered that the directors were clever gentlemen's servants or clerks who had given the addresses of their masters and employers as their own. The company's bankers when applied to professed ignorance of the company's existence. The auditor, whose name appeared in the prospectus, could not be heard of. Yet this company must have done a flourishing business, if there were a foundation for its boast that it had ten thousand policies in existence. The indignation which these discoveries arouses, is generally expended in calling for legal protection and supervision; that some legislation ought to take place is very probable, but for the most part the public has the remedy in its own hands. An Act of Parliament would not hinder the credulous from purchasing quack medicines, nor would an Act prevent those willing to be deceived from trusting in the promises of bubble companies. It is most desirable that all assurance companies should make yearly returns of their affairs. But this is the only piece of legislation on this head for which there is a proved necessity.

Financial.

TORONTO STOCK MARKET.

(Reported by Pellatt & Osler, Brokers.)

There has been a large business done during the week in debentures and mortgages.

Bank Stock.—Bank stocks are very little enquired for and close, in most cases slightly lower. Montreal was sold in the beginning of the week at 145 and 145½; the market closed with sellers at 144½ and buyers at 144. Buyers offer 105 for British, none in market. There are sellers of Ontario at par and buyers at 99¾. Toronto is offered at 122 with no buyers over 121, little in market. Royal Canadian was again active and sales were made at 77½, 78 and 79 and closed with buyers at 78 and sellers at 78½. Small sales of Commerce occurred at 102½ and 102¾; there are sellers now at 102½ but no buyers over 102. No buyers of Gore; it is a little lower. Merchants sold at 107¼ and 107½, holders now ask 107¾. Buyers offer 101 for Quebec with sellers at 102. Molson's has declined one per cent closing dull at 107½ to 108½. Sellers would accept 102 for City but buyers offer only 101½. There were sales of Du Peuple at 108, which price would still be paid. Sales of Jacques Cartier were made at 109 and 109½; there are still buyers at the latter rate. Mechanics sold at 97¼ which price would still be be paid. There are buyers and sellers of Union at 105 and 106 respectively.

Debentures.—There were small sales of Canada Debentures during the week. Dominion Stock and Bonds are in demand at 106½ and 105 respectively. No Toronto have been offered for some time past. There were considerable sales of first class County debentures at very high rates.

Sundries.—There are buyers of City Gas at 107½, none in market. Canada Permanent Building Society sold at 125½ to 126, very little in market. Western Canada Building Society is offered to a limited extent at 121½, buyers will not give over 121. Freehold Building Society is in good demand at 111, and buyers would probably advance ½ per cent. Sales of Montreal Telegraph were made at 133½; there are buyers now at 133 and sellers at 134. Canada Landed Credit is enquired for at 78, there are sellers at 80. British America Assurance is enquired for at 55, sellers at 56. Several mortgages have been placed at 8 per cent and in many cases as high as 10 per cent has been paid. Money is much wanted and the banks are scarcely able to meet the demand.

POST OFFICE SAVINGS BANK.—The statement for the month of March shows that the amount in the hands of the Receiver General on the 31st, $676,383 40 against $628,884 82 on 28th February. Amount received from depositors in March, [illegible],875, interest in closed accounts $283 26; withdrawn cheques in March, $38,659 68. Of the total deposits, $384,146 bears interest at 4 per cent., and $285,800 at 5 per cent.

—The Montreal papers state that Mr. Weir's scheme for the exportation of $2,000,000 of American silver from Canada has failed, the principal cause of such failure being the neglect or refusal of the subscribers to "the guarantee fund," to pay up their subscriptions—involving serious loss to Mr. Weir on the large amounts already shipped. It is also stated that in consequence of the failure of several houses in Montreal, Mr. Weir has been compelled to make an assignment for the benefit of his creditors. It is added that his liabilities are small and almost wholly limited to a few friends. Since the collapse of the scheme, silver has declined considerably as our quotations elsewhere show.

—The report of the Bank of British North America for the year 1868 gives the net profit at £70,304 14s. 9d. which will allow the payment of a dividend at the rate of 6 per cent. per annum, and a bonus of 1 per cent.

—The annual report of the British American Land Company, recommends a dividend of 1*l.* per share, which will absorb 6,000*l.* and leave 442*l.* to be carried forward.

INSOLVENTS—Ottawa, April 13. The following insolvents are gazetted:—Ronald McDonald, Ailsa Craig; Duncan McNaughton, Lindsay; A. & E. Amos, Montreal; Thomas and Henry Lindop, St. Thomas; James Bradshaw, Hamilton; Joseph Manning, Bond Head; Wm. Elliott, Wilberford; C. A. Ward, Sherbrooke; Harry Joslin, Toronto; Wm. Weir, Montreal; Jay Ketchum, Toronto; Charles Pegnem, Montreal; Henry Trent, Newmarket; R. S. Aikman, Norwich; John Turner, Blairton; Wm. Mallish, Bradford; Wm. Dunn, Hamilton; Mrs. T. C. Scott (wife of Charles Wilson), Montreal; Thomas Isaac, Ottawa; Francis Kettle, London; John Curry, Walkerton; Ira Fulford Walkerton; R. Wright, London; McMillen & Carsen, Montreal; Aaron Reynolds, Woodstock; Geo. Humphries, Ottawa.

JOHN LANGTON,
Audit Office, Auditor.
Ottawa, April 9, 1869.

GREAT WESTERN RAILWAY.—Traffic for week ending March 26, 1869.

Passengers	$26,281 79
Freight	57,264 12
Mails and Sundries	2,008 02
Total Receipts for week	$85,553 93
Coresponding week, 1868	78,620 40
Increase	$6,933 53

NORTHERN RAILWAY.—Traffic receipts for week ending April 3th, 1869.

Passengers	$2,966 66
Freight and live stock	4,672 66
Mails and sundries	632 48
	$8271, 80
Corresponding Week of '68.	2705, 30
Increase	$4433 50

NORTHERN RAILWAY.—Traffic receipts for week ending March 27, 1869:—

Passengers	$2,547 40
Freight	5,554 02
Mails and sundries	190 30
Total receipts for week	$8,291 72
Corresponding week 1868	8,252 15
Increase	$39 57

EUROPEAN AND NORTH AMERICAN RAILWAY.—The receipts of the E. & N. A. Railway

March, 1869, and March, 1868, compare as follows:—

Passengers	$4,120	$3,776
Freight	7,592	6,791
Mails and Sundries	648	504
Total	$12,360	$10,871

An increase of $1,489 over March, 1868. The gain was chiefly in freight.

Commercial.

Toronto Market.

There is no improvement in the state of trade since last week. The impending legislation on the banking system is the cause of a good deal of uncertainty among financial and mercantile men and tends to keep business quiet. Every day new instances arise which go to illustrate the necessity of a change in the bankrupt law or in the present modes of doing business. There is a great deal of complaint of tardiness on the part of country merchants in paying off their debts. It is freely asserted that they are as a class, more ready to buy than to pay for what they get.

Dry Goods.—The returns at the port of Montreal for the first quarters of the present and last year are—

	1868.	1869.
Woolens	$ 806,795	$ 617,698
Cottons	1,085,878	1,046,206
Silks and velvets	159,209	137,485
Fancy goods	90,730	71,378
Linen	81,051	32,215
Shawls	2,568	1,241
Hats, caps & bonnets	134,600	140,664
Hoisery	33,819	62,133
	$2,391,650	$2,109,020

Groceries.—In this branch the week has been unusually quiet and payments are very slow; prices unchanged. The imports of leading articles at Montreal for the last quarter were—

	1868.	1869.
Tea, green	$194,978	$369,339
Tea, black	29,914	36,198
Tobaccos, manufactured	9,764	4,209
Coffee	6,179	5,275
Molasses	9,941	16,428
	$250,776	$431,449

Boots and Shoes.—The leading houses report fair sales at steady prices.

Grain.—*Wheat*—Receipts 4,280 bushs. and 332 bushs. last week. Spring is dull and about 2 cents lower on the quotations of last week. The recent decline in the British markets has sensibly affected this market. Spring is now worth 94 to 95c. f.o.b.; a lot was offered for May delivery at the latter price. Sales of 1 car at 94c. on the track. Fall, in the absence of any demand whatever, there were no transactions; it is held at $1.05 and freely offered at the latter quotation. Midge Proof is worth about the same prices as Spring; one car sold at 96c. f. o. b. *Barley*—Receipts 500 bush. and 340 bush. last week. The market is dull and nominal, nothing doing except on the street; there is very little offering and stocks are now small. For a cargo which was wanted $1.20 was asked; choice for seed would bring about that figure. *Peas*—Receipts trifling; the market is dull at quotations: round lots are held at 80c., no sales. *Oats*—Receipts 3,600 bushs. and 1,800 bushs. last week. The market is rather easier in consequence of good receipts; car loads are worth about 52c. on the track, with few buyers; sales were made early in the week at 52c. and later at 52c. *Rye*—is offered in car lots at 65c., and no sales reported. *Corn*—sales of four car loads are reported at 65c. and one or two cars at 64½. *Seeds*—Timothy is dull as quoted; 2 cars sold on p.t.; good samples are worth $2.25 to $2.40, inferior is dull and almost unsaleable. Clover is offering at $5.75 to $6.25. Flax seed, $2. A large business has been done with farmers during the week.

Flour.—Receipts 4,280 bbls., and 3,242 bbls. last week. No. 1 Superfine is in demand at $4.10 and favorite brands a few cents more; 200 bbls. Whitchurch, spring wheat extra sold at 4,25 f.o.b. 500 bbls. choice No. 1 sold at $4.12½, and 500 more at the same price. Two lots of 100 bbls. each sold at $4.10 on the cars. Fancy is in some demand, a lot of 800 bbls. sold during the week at $4.25, in store. Extra is offering at $4.50 to 4.60, and a lot of 100 bbls., good brand, sold at $4.50; also, 1,000 bbls. on private terms. No Superior in market; the millers have ceased to manufacture it some time ago. *Oatmeal*—Good ordinary 100 bbls., lots are worth $5.50; very choice for retail purposes is worth $5.75. *Cornmeal* selling slowly at $3.50 in lots.

Stocks.—in store in Toronto on the 12th April were: Flour, 26,012 bbls.; do. April 1st, 25,800 bbls.; fall wheat, April 12, 66,400 bushs.; do. April 1st, 124,400; Spring wheat, April 12, 97,412 bushs.; do. April 1st, 105,100 bushs. Oats, April 12, 18,400 bushs.; do. April 1st, 21,900 bushs. Barley, April 12, 11,415 bushs., do. April 1st, 30,500 bushs. Peas, April 12, 30,600 bushs.; do. April 1st, 35,100 bushs.

Provisions,—The market is uncommonly dull; as there is nothing doing our quotations are purely nominal. Stocks of most every article are down to 12½c. No. 1 dairy butter is worth our quotations, but anything inferior cannot be placed.

Petroleum.—The demand is falling off as the season progresses and prices have underwent a decline; we quote car loads at 27½c., and small lots at 30c.; there is very little difference in the quality of the oil now sold. The combination have determined not to manufacture any more for home consumption till present stock is disposed of.

Freights.—Though the season is open there is very little doing; one or two vessels who started out have discharged their hands in the absence of freight. Vessels are offering to Toledo at 5c., and to Oswego at 3c., U. S. Currency, on grain. Fright steamers are contracting for flour to Halifax at 75c. The Grand Trunk have reduced the rates to Halifax to 90c., to St. John 85c., to Montreal 30c. Freights by the Great Western Railway, to all points, unchanged.

Money and Exchange:—Money is in good demand and works close. Bank lending rate 7 per cent; street rate 10 to 12 per cent. Sterling—Bank Exchange selling rate for 60 day bills, 8½; buying rate, ½ to 1 less. Gold drafts on New York par ¼ premium. Silver cought and sold by the brokers at 3½ to 4½ per cent. discount.

Halifax Market.

Breadstuffs, April 6.—Supers. for the week continue active, with a growing demand for No. 2, and fine flours. We note the arrival of several vessels from outports, and there is now every prospect of an early Spring trade, and continued demand. Several round lots of 1,000 bbls. changed hands last week at $5.50 to $5.60 for supers. and are now held at higher prices, and we feel that any permanent advance abroad will meet with sympathy here, and increase the disposition to speculate. Our stocks are quite reduced, and demand is in excess of receipts. Corn and oatmeal are without quotable change, and inactive. Rye flour is without enquiry. White beans dull and lower.

West India Produce.—At auction yesterday Cienfuegos Molasses realized 36½c. (in bond) for several small parcels. A cargo of Sugar was offered at 10c. and 9½c. refused. It will probably go to Montreal.

Fish and Oil.—Fish continues in request at quotations. Oil in sympathy with foreign markets, is somewhat easier. Stocks are too light to make it an object to press sales, and the market is without tone.

Exchange.—Bank drafts London at 60 days at 13 per cent. Montreal sight 4 per cent. New York gold 4 per cent. Currency 20 per cent. discount. St. John, N. B. 3 per cent. premium.—*R. C. Hamilton's Circular.*

Petroleum.

The Titusville *Herald* gives the following table, showing the production of petroleum during March, the average per day, the production previously reported in 1869, and the average per day since January 1st last year, and the average per day for the same time:

Total shipment of crude for March of brls, of 45 gallons each, brls	245,241
Add to reduce to brls of 43 gals each, brls	11,406
Total shipment of brls of 43 gallons each, brls	256,647
Stock on hand March 1, brls	282,450
Stock on hand April 1, brls	329,324
Add increase on April 1, brls	46,874
Total production during March, brls	303,521
Average per day for 31 days, brls	9,791
Production previously reported, brls	588,391
Total product since January 1, brls	891,912
Average per day for 90 days, brls	9,910
Total product same time last year	834,760
Average per day same time last year	9,280

The following table shows the number of new wells drilling at the date named:

November 17, 1867	255
January 7, 1868	182
April 7, 1868	193
July 7, 1868	299
October 7, 1868	370
January 1, 1869	373
February 1, 1869	341
March 1, 1869	134
April 1, 1869	292

The following were the shipments from January 1 to April 1, 1869, and the crude equivalent:

To New York, brls	242,571
To Cleveland, brls	245,756
To Boston, brls	30,176
To Philadelphia, brls	25,474
To Pittsburgh, brls	152,040
To Portland, brls	9,350
To other points	66,545
Total brls	771,912
Difference between crude and refined shipped, brls	18,989
Shipment of crude equivalent, brls	790,901

Lake Tonnage.

The Detroit *Post* publishes a very elaborate and valuable comparative statement of the merchant marine now on the lakes, compared with the same at different periods, from which we extract the following table:

	No.	Tons.	Value.
American steamers	75	76,624	$1,670,000
American propellers	153	82,330	3,527,000
American tugs	205	16,506	1,596,000
American sail vessels	1,376	355,592	10,977,000
American barges	30	9,262	209,000
Total American	1,839	540,314	$18,979,000
Canadian steamers	56	18,572	$1,176,000
Canadian propellers	19	7,565	498,000
Canadian tugs	62	19,102	514,000
Canadian sail vessels	266	52,943	1,733,000
Canadian barges	27	9,809	133,000
Total Canadian	430	99,079	$4,054,000
Am. and Can. steamers.	131	95,196	$2,846,000
Am. and Can. propellers	172	89,895	5,025,000
Am. and Can. tugs	267	26,696	2,110,000
Am. and Can. sail vessels	1,642	493,525	12,710,000
Am. and Can. barges	57	19,071	342,000
Total Am. and Can. craft *2,269		636,903	$23,033,000
Total, 1867	2,388	615,761	$20,316,510
Total, 1866	1,165	547,587	17,662,000
Total, 1861	1,545	383,307	13,100,200
Total, 1856	1,197	819,523	12,413,000

*About 20,000 of tonnage, worth $1,000,000, are now in process of construction, which are not included above.

—A large meeting of the inhabitants of Petrolia was held on the 2nd instant, to consider the deficiency of railway accommodation, and to submit a report of their grievances to the Manager of the Great Western. The correspondent of the *Free Press* says the certain traffic for the coming year is much larger than usual. The Crude Oil Association have already contracted for delivering over 112,000 barrels of oil for shipment outside the Dominion of Canada, and it will require at least 50,000 barrels in addition to supply the home consumption, all of which must be shipped from this point. The producing and handling of this amount of oil will add no little to the necessities of convenient railway facilities.

NOTICE

IS hereby given that the Liquidators of the Western Insurance Company, Limited, will apply to the Minister of Finance for his warrant authorizing the withdrawal of the deposit made by said Company with the Minister of Finance, as required by statute of the late Province of Canada, chapter 83 of 22nd Victoria, the said Company having ceased to do business in Canada.

CARTON & HATTON,
35 Attorneys for Liquidators.

THE TORONTO AND NIPISSING RAILWAY COMPANY.

Total Length to Lake Nipissing, about 200 Miles.

FIRST SECTION FROM TORONTO TO COBOCONK, 85 MILES;

With a Branch of 18 miles from the Main Line to the Town of Lindsay.

Total Capital, $3,000,000.

Capital for the First Section (Main Line) **$1,275,000.**

BONUSES already Voted by Municipalities for the First Section of the Main Line, $399,000.

AS FOLLOWS:—

City of Toronto, $150,000; Scarboro', $10,000; Markham, $30,000; Uxbridge, $50,000; Scott, $10,000; Brock, $50,000; Eldon, $44,000; Bexley, $15,000; Luxton, Digby and Longford, $25,000; Somerville, $15,000.

BONUSES yet to be obtained, including those for the Lindsay Branch, $155,000.

First issue of stock in $100 shares, $400,000.

Upon which will be Issued Bonds for $476,000.

Upon $126,000 of which a Guarantee from the Government of Ontario will be applied for, as equitable assistance for the construction of the Railway through and into Crown Lands on the route of the First Section.

PRESIDENT—John Crawford, Esq., M.P.

VICE-PRESIDENT—J. E. Smith, Esq., Collector of Customs.

DIRECTORS:

Hon. M. C. Cameron, Provincial Secretary; Hon. David Reesor, Senator; W. F. McMaster, Esq., Captain Taylor, Wm. Gooderham, Jun., Esq., H. S. Howland, Esq., Vice-Pres. Bank of Commerce; G. Laidlaw, Esq., H. P. Crosby, Esq., M.P.P., Joseph Gould, Esq., Thomas Wilson, Esq., John Gordon, Esq., A. M. Smith, Esq., T. C. Chisholm, Esq., D. COUNSEL—Hon. M. C. Cameron, Provincial Secretary.
SOLICITOR—John Leys, Esq.
CONSULTING ENGINEERS—Sir Charles Fox & Sons.
BANKERS—Bank of Toronto.
BROKERS—Blaikie & Alexander, Pellatt & Osler.
SECRETARY—Charles Robertson, Esq.

OFFICES—46 FRONT STREET, TORONTO.

PROSPECTUS.

The Provisional Directors of the Toronto and Nipissing Railway Company, finding that the further progress in the building of Broad Gauge Railways in Canada, with English capital, was no longer financially practicable or expedient for lines of Railway projected for local traffic, and having become cognizant of the successful working for a number of years of Railways built on the three feet six gauge, in the Kingdoms of Norway and Sweden, in the colonies of Queensland and New Zealand, and also in India, and that these Railways were capable of accommodating a traffic of about a million or a million and a half of tons of goods per annum, and of carrying passengers at a speed of twenty-five to thirty miles an hour, and seeing that the average speed of passenger trains, including stoppages, in Canada do s not exceed twenty miles an hour, and that the total traffi : of the Northern Railway (which offers a fair illustration of the traffic to be obtained by the Toronto and Nipissing Railway) did not exceed 195,000 tons and 140,000 passengers, have therefore resolved to construct the Toronto and Nipissing Railway on the three feet six gauge, in the most economical and efficient manner consistent with a total cost of $15,000 per mile.

The Directors have also noted Capt. Tyler's report on the Festiniog Railway, two feet gauge, in Merionethshire, Wales, the freight and passenger traffic of which approximates closely to that of the Northern Railway, and, with the exception of the lumber traffic, largely exceeds that carried on the Lindsay and Port Hope, or on the London and Port Stanley Railway.

With a view to a just apportionment of the risks incidental to capital invested in Railway enterprise in Canada, it was resolved to ask the municipalities most to be benefitted by the construction of the Railway, for *one-third of the total cost of the Railway, viz.*, $5,000 *per mile, by way of bonus* or gift. This proportion of the cost has *already been voted* for the main line, excepting less than $50,000, yet obtainable, in debentures bearing six per cent., payable in 20 years—securities which are unexceptionable, and will sell here at or near par.

Of the remaining two-thirds of the capital, it is proposed now to offer here $400,000 to be subscribed in stock. If that or a larger amount is not subscribed, bonds will be issued for the balance of about $6,000 per mile. Thus local capital to the extent of about two-thirds of the cost of the Railway, will be security to the holders of the bonds of this Company.

The interest-bearing capital will thus be $10,000 per mile.

The Directors do not propose to extend the line beyond Coboconk, towards Lake Nipissing, unless subsidized by the Government of this Province with land or money sufficient to guarantee the Company from the loss of any private capital to be invested in the sections of the line beyond Coboconk.

Nevertheless, the Company feel assured that the first section being successfully completed, the remaining sections will immediately receive aid from the Government to the extent necessary to secure the construction of the line to the ultimate terminus at Lake Nipissing—thus ensuring to the proprietors of the first section the practically unlimited timber traffic, as well as the general business of an immense new territory of twenty thousand square miles.

The terminus of the first section being located on the Gull River, with access to all its tributaries, and to the Burnt River, insures for this Railway a timber and lumber traffic certain to exceed in duration of supply and quantity the timber and lumber traffic of the Northern Railway, and which will undoubtedly equal or exceed that of the Lindsay and Port Hope Railway, which amounted to nearly one hundred millions of feet in the year 1868.

The sawn lumber traffic of the Northern Railway of Canada in 1868, amounted only to about fifty-five (55) million feet, and the square timber traffic to one million six hundred thousand cubic feet.

IN 1861.

The local traffic of the Northern Railway of Canada amounted to..		120,000 tons
Through.....		25,000 "
Passengers.....		100,618 "
Local Receipts.....	$362,507

Do. on through traffic	4,949	
Or equal to 14⅛ per cent on $15,000 a mile (local earnings); or 22½ per cent on $10,000 per mile.		

1861—Running expenses per cent, 68; local tonnage, 120,000 through tonnage, 25,000; total tons, 145,000; passengers, 106,618; local receipts, gross, $362,507; through receipts, gross, $48,432; total receipts, gross, $410,939; local receipts, nett, $115,982; through receipts, nett, $15,498; dividend on $15,000 a mile, local, 8 1-3; dividend on $15,000 a mile, through, 1 1-10.

1864—Running expenses per cent, 52; local tonnage 189,700; through tonnage, 8,346; total tons, 189,046; passengers, 104,349; local receipts, gross, $452,382; through receipts, gross, $14, 884; total receipts, gross, $467,266; local receipts, nett, $217,143; through receipts, nett, $7 144; dividend on $15,000 a mile, local, 15 2-5; dividend on $15,000 a mile, through, 1-2.

1863—Running expenses per cent, 61; total tons, 194, 588; passengers, 138,965; local receipts, gross, $537,380 through receipts, gross, $12,690; total receipts, gross $550,070; local receipts, nett, $209,578; through receipts nett, $4,949; dividend on $15,000 a mile, local, 14 7-8; dividend on $15,000 a mile, through, 1-3.

Total tons, 528,629; passengers, 349,929; local receipts gross, $1,352,269; through receipts, gross, $76,006; total receipts, gross, $1,428,275; local receipts, nett, $542,703 through receipts, nett, $27,591; dividend on $15,000 a mile, local, 12 5-6; dividend on $15,000 a mile, through, 2-

AVERAGE.—Total tons, 176,209; passengers, 116,643 local receipts, gross, $450,756; through receipts, gross $25,335; total receipts, gross $476,091; local receipts nett, $180,901; through receipts, nett, $9,197; dividend on $15,000 a mile, local, 12 5-6; dividend on $15,000 a mile through, 2-3.

From the above data it will be seen that the Northern Railway carried an average for those three years of 176,209 tons of freight, and 116,643 passengers; the average gross receipts being $450,756, while the nett receipts from local traffic were $180,901, equal to an annual dividend of 12 5-6 per cent on a cost of $15,000 per mile; or 19 1-4 on $10,000 per mile.

It is remarkable and of consequence to intending subscribers for stock of the T. & N. R., that the nett receipts for through traffic for the same years only averaged $9,1 per annum, equal to a dividend of ⅔ of one per cent. on cost of $15,000 per mile. This fact clearly proves the value of local as against through traffic.

The Grain Traffic tributary to the Toronto and Nipissing Railway undoubtedly will not fall below 900,000 bushels and probably will largely exceed that quantity. The Passenger Traffic is anticipated to average 100,000 per annum.

The country through which the first section of the Toronto and Nipissing Railway will pass, is more populous wealthy and extensive than that tributary to the Northern Railway—being one of the oldest and finest settled districts in the Province of Ontario. Various unsuccessful efforts have previously been made to accommodate this district with railways.

The most moderate estimate of the gross receipts from the traffic in timber, lumber, cereals, passengers, etc., to be carried over the T. & N. R. place the amount at an average of $400,000 to $500,000 per annum, for the first eight or ten years, when the traffic must necessarily increase to much larger amount.

The traffic to create this revenue will be derived from the following items, and in about the proportions set forth:

Pine, or sawn lumber, for the first eight years, 80,000,000 ft. at $2 per 1,000 ft.....	$160,000
Square timber, 1,250,000.....	37,500
Cereals, 900,000 bushels, at 5c per bush.....	45,000
General goods, 15,000 tons, at an average of $3 40 per ton.....	51,000
Mails and Express.....	15,000
Cordwood, 25,000 cords at $1 50 per cord.....	37,500
Passengers, 100,000.....	100,000
	$446,000

Allowing 60 per cent. for running expenses, the net earnings amount to $178,400—equal to a dividend of 14 per cent. on a cost of $15,000 per mile: and on the actual cost to the Company of $10,000 per mile, the dividend from such nett earnings would be 21 per cent.

The Provisional Directors invest their own means on their faith in the correctness of these estimates.

The terminus at Coboconk, on the Gull River, will connect the Railway with a vast stretch of Inland Navigation upon which steamers now trade, and which, with comparatively inexpensive improvements already partly undertaken by the government, will give these boats access to the Railway, and will afford almost inexhaustible supplies of pine and hard wood.

By the Act of Incorporation, the Company is specially bound to carry cordwood, and to afford every necessary facility for so doing at the specific rate of 3 cents per cord per mile for dry wood, for all distances under 50 miles and 2½ cts. per cord per mile for all distances over 50 miles ---a rate which has been found satisfactory, by the test of actual experience on the Government Railways in New Brunswick.

This condition will enhance the cost of fuel to the Company; but the increased traffic and prosperity consequent upon this trade it is fully believed will more than compensate for the extra cost of fuel.

The numerous association of gentlemen who have promoted and borne the preliminary expenses of this enterprise, and who desire to see it carried out in good faith on sound commercial principles, *are resolved*, in so far as their influence is equal to the task, to have this railway controlled by the most respectable capitalists of this city and the country on the route of the railway, who may take stock in it; to convert their own securities and pay cash to contractors, and not to surrender control of the railway to contractors or bondholders; to let the contracts in

manner calculated to ensure the healthiest competition; in other words, to have value for the money from the turning of the first sod to the laying of the last rail.

The country on the route of the first section of the railway is generally level, although in two townships it is broken or rolling, yet the soil being loamy in these exceptions, and there being almost no bridges; the superficial examination had and the flexibility of the gauge ensures a minimum of cuttings and fillings—while timber for bridges and ties, and lumber for buildings and fences, can be had at the least cost possible in Canada.

Every other consideration in the first instance will be subordinated to the construction of a first-class permanent way, the best of timber bridges; deep and good ballasting Rails to weigh 40 lbs. to the yard, and to be selected of the best quality.

Arrangements are in progress which will secure to the Company free right of way, through the city, and egress, if desired, for a few miles out of the city, on the line of the Grand Trunk, by means of a third rail; and the disposition of the proprietors and other circumstance along the line are so favorable that the whole right of way will be obtained for an amount not exceeding $20,000.

Station grounds and dockage will be had in this city either free or for a nominal rental.

It is the desire of the Provisional Directors to have their Chief Engineer appointed with the concurrence, and subject to the approval of the Company's Consulting Engineers, Sir Charles Fox & Sons, who will be held responsible for the excellence of the works, economy of construction, and the success here of the system of narrow gauge railways of which they have large experience elsewhere, and with the initiation of which in this country they are honorably identified.

On these premises the Provisional Directors appeal for stock subscriptions to the citizens of Toronto, to the municipalities and to the business men and proprietors of land along the route of the railway, and to capitalists elsewhere, believing that the most cautious and prudent investors will find the stock of the Toronto and Nipissing Railway worthy of their attention.

The stock books will be opened at the Company's offices Front Street, on the 12th April, at 10 o'clock a.m.; meanwhile forms of application for shares can be had on application from the secretary and from the reeves and clerks of the several municipalities on the route of the railway, and from Messrs. Blaikie & Alexander, Toronto, and Pellatt & Osler.

CASEY S. WOOD, Esq., Lindsay.
JOSEPH GOULD, Esq., Uxbridge.
McDOUGALD & DAVIDSON, Montreal.
ALEXANDER FRASER, Esq., Quebec.

A member of the firm of Charles Fox & Son will be here shortly, and immediately on his arrival operations will be commenced.

CAPITAL, ... $200,000,

IN 8,000 SHARES—$25 EACH.

President—WM. EDGAR, Esq., Hamilton. Vice-President—ROBERT REFORD, Esq. (Messrs. Reford & Dillon), Montreal.

Secretary-Treasurer—A. McK. COCHRANE, 388 St. Paul Street, Montreal.

THIS COMPANY, with machinery now in working order and in course of construction, will be able to manufacture this year FROM TEN TO TWELVE THOUSAND TONS OF GOOD FUEL. Actual working shows—

I. That the fuel can he produced for $1.45 a ton, and with the improved machinery, at a much less cost.
II. That, for steam purposes, one ton of it is superior to one cord of wood, in the proportion of 31 to 27.
III. That, for domestic purposes, it is equal to wood or coal, and leaves very little ashes—about five per cent.

At the annual meeting of the Company in Montreal, it was decided to offer one thousand shares of Stock in Toronto. Mr. Isaac C. Gilmor has been appointed agent of th Company in Toronto, and is authorized to receive subscriptions for the Stock.

Prospectus, Map of the Property, and further information may be obtained by addressing

ISAAC C. GILMOR, 58 Colborne Street, Toronto.

Or A. McK. COCHRANE, Secretary-Treasurer, 388 St. Paul Street, Montreal. 30-35t

THE CONNECTICUT MUTUAL
LIFE INSURANCE COMPANY,
HARTFORD, CONNECTICUT.

WOODBRIDGE S. OLMSTEAD, SECRETARY,
EDWIN W. BRYANT, ACTUARY,
JAMES GOODWIN, PRESIDENT,
ZEPHANIAH PRESTON, VICE PRESIDENT.
LUCIAN S. WILCOX, MEDICAL EXAMINER.

Organized in 1846. Charter Perpetual.

The Largest Mutual Life Insurance Company. Numbering Over 75,000 Members.

BEING A PURELY MUTUAL COMPANY ITS ASSETS BELONG EXCLUSIVELY TO ITS MEMBERS,

ASSETS, $21,000,000.—Acquired by prudent and economical management of twenty-two years, without the aid of a single dollar of original capital.

SURPLUS ASSETS, $6,361,967—All profits divided among the members. Each policy holder is a member. There are no stockholders.

ITS DIVIDENDS—Have averaged over 50 per cent. annually. Total amount of dividends paid the members since its organization, $4,397,142.

ITS SUCCESS UNPARALLELED—It has arrived at the extraordinary condition where the income from annualinterest alone is more than sufficient to pay all the losses. Total amount of losses paid by the Company, $6,868,528.

ITS RESPONSIBILITY—For every $100 of liabilities it has $154 of assets.

LAST YEAR'S PROSPEROUS BUSINESS.

Amount insured fiscal year, 1867 .....$45,647,191 00 | Income received fiscal year, 1867.....$7,530,886 19

During its last fiscal year this Company paid to its living members, and to the families of deceased members, nearly $2,000,000, and at the same time added more than four millions to its accumulated capital.

The whole record of this Company has been one of prudent managment and prosperous advancement. Among the older and leading Life Insurance Companies its average ratio of expenses to income has, throughits entire history, been the lowest of any.

ITS LIBERALITY—It accommodates the insured by giving credit for part premium, and grants insurance to meet all the contingencies and wants to which Life Insurance is applicable.

It issues policies on a single life from $100 to $25,000.

MEDICAL REFEREES—J. WIDMER ROLPH, M.D.; H. H. WRIGHT, M.D.

LIFE ASSOCIATION OF SCOTLAND.

Invested Funds Upwards of £1,000,000 Sterling.

THIS Institution differs from other Life Offices, in that the BONUSES FROM PROFITS are applied on a special system for the Policy-holder's personal benefit and enjoyment during his own lifetime, with the option of large bonus additions to the sum assured. The Policy-holder thus obtains a large reduction of present outlay, or a provision for old age of a most important amount in one cash payment, or a life annuity, without any expense or outlay whatever beyond the ordinary Assurance Premium for the Sum Assured, which remains intact for Policy-holders' heirs, or other purposes.

GRAND TRUNK RAILWAY.

The directors of this company state in their report that the gross receipts upon the whole undertaking, including the Buffalo and Champlain lines, had been for the half-year ending the 31st December, 1868, 756,163*l*. The working expenses, exclusive of renewals (being at the rate of 59.44 per cent. against 63.50 of the corresponding half of last year) 449,487*l*; the renewals and improvements of the permanent way and works in the half year debited to revenue were 126,772*l*, making together 576,259*l*, leaving an available net balance of 179,904*l*. Deducting the loss on American currency, 43,318*l*, left 136,586*l*, against 125,705*l* in the corresponding half of 1867. To the 136,586*l* was added 8,835*l*, net revenue from the preceding half-year, making a total balance of 145,421*l*. From this was deducted 16,171*l* for postal and military revenue due to the postal bondholders, leaving 129,250*l*. From this was deducted 17,362*l* for interest; 73,231*l* for rents of Atlantic and St. Lawrence line, Detroit line, Champlain and Buffalo lines; and 10,779*l* for equipment bond interest, leaving a balance of 27,877*l*. Comparing the results of the half year's working with the corresponding period of 1867, there was an increase in the gross revenue of 51,784*l*, equal to 7.35 per cent, with an increase in the working expenses, exclusive of renewals and improvements, of only 2,181*l* on the increased traffic carried. But for the fact that there had been charged in the half year 5,400*l* for insurances on the company's property, the working expenses would have been less than in the same period of 1867, notwithstanding the increase of traffic of nearly 52,000*l*. This amount for insurance represented the half year's premium on a policy which came into force last July for $4,300,000 not only for the company's buildings, but also for the wooden bridges on the railway, the stocks of cordwood and lumber at the different stations, and also freight in the warehouses and in transit. The late serious losses by fires at Toronto and Sarnia led to this insurance being effected, and although the full value of the company's property in buildings, &c., was of course not embraced in this policy, still it was believed to be sufficient to meet all ordinary risks. The renewals in the half year amounted to 126,772*l*, against 85,819*l*, for the corresponding period of 1867. In this sum was included a charge of 22,747*l* for improvements in the renewal of the permanent way and works, an item which in 1867 amounted to 17,351*l*, and which was then charged to capital. The weight of the rails had been increased from 62lb to 75lb per yard. The number of miles of railway relaid with new iron in the half year was 88½, and the number of new ties put in was 491,993*l*. The large outlay that had been made for renewals had, of course, resulted in a very much improved condition of the line, as was shown by the reduction in the cost of the maintenance of the road, amounting in the half year to 6,880*l*. The directors regretted that the rails sent out from this country in 1867, purchased from the best makers, were not giving satisfaction. The directors took every precaution to secure the best rails which could be made, and exacted guarantees from the makers which they were putting in force. The small quantity of steel rails sent out in 1865, although placed on a part of the line where the traffic was very heavy, showed no signs of giving way. The average receipt per passenger was 6s. 9½d. against 6s. 9¾d. in 1867, and the average receipt per ton of freight was 16s. 8¾d. against 15s. 10¼d. in the corresponding period of last year. The loss on American currency was 43,318*l*. against 39,384*l*. in the corresponding half of 1867. Gold fluctuated during the half year from 149½ on the 6th of August to 132¼ on the 6th of November. Since then its premium value had further declined. The indirect loss from increased prices of labour and materials was in the half year 60,000*l*. The directors believed they were justified in saying that but for the loss, direct and indirect, through the depreciated currency and high prices resulting from the war in the States, the company would have been in a position to pay cash dividends on the first and second preference bonds and stocks at least, and probably on the third preference stock, also, since 1863. The total amount charged against revenue for renewals between 1862 and December, 1868, amounted to 907,809*l*.; the loss on American currency amounted to 413,521*l*. A table shows that the total profit on working the company's lines in the past 1861 amounted to 142,492*l*.; in the year 1862 to 155,674*l*.; in the year 1863 to 288,414*l*.; in the year 1864 to 271,074.; in the year 1865 to 221,377*l*.; in the year 1866 to 364,999*l*.; in the year 1867 to 218,231*l*.; and in the year 1868 to 297,894*l*. In their last report the directors called attention to the fact that certain bonds, issued by the city of Portland in aid of the construction of the Atlantic and St. Lawrence Railroad, amounting in the aggregate to $1,500,000, and, covered by a first mortgage on the undertaking, would begin to fall due in Dec. last, and that the whole amount would mature between that period and January, 1871, and that the sinking funds created for the redemption of these bonds would not provide for the payment of more than half the amount. The Grand Trunk Company, under the terms of the lease of the Atlantic and St. Lawrence line, was bound to provide for the payment of these bonds at maturity, either by means of the sinking funds or otherwise. The Board having no available funds with which to meet the half of the bonds not covered by the sinking fund, had to approach the authorities of the city of Portland with the view of obtaining an extension of time, and the directors were happy to be able to state that an agreement had been concluded with the city of Portland, under which the city undertook to issue new bonds for the balance of the original issue, which would not be taken up by the moneys accumulated and to accumulate in the sinking fund before 1871. After the transaction of the ordinary business, the meeting would be made special to consider a proposed new agreement with the Buffalo and Lake Huron Railway Company, the object being to settle past differences and to lease the line in perpetuity instead of for 21 years, the original term. Also to substitute a fixed half-yearly payment, instead of at present a fluctuating amount in proportion to the net receipts of the two undertakings. Contracts for the construction of portions of the Intercolonial Railway had been entered into by the Canadian Government, and the works would be commenced as soon as the snow left the

ground. The four sections were together 91 miles in length. Tenders had also been invited for three more, together 71 miles in length. It would be seen that 162 miles would be let by the end of this month, and tenders for the whole of the remaining sections would, it was expected, be immediately advertised, as it was intended to have the entire length of the railway opened for traffic not later than 1872. The work would therefore be pushed on with the utmost vigor.

British American Land Company.—The annual general meeting of this company was held recently in London. The report was taken as read.

The Chairman said that their commissioner from Canada was present, and had made recently a very careful survey of the property. The sales last year had been at an average of 6s. 4d. per acre as against 13s. 2d. the average of the year before, but this was accounted for by the sale of a large tract which was not arable land, but only of value for the timber on it. This had been bought at half a dollar an acre and sold at a dollar. There had been much less of cancelled sales than in former years. The timber accounts were not satisfactory, as there was now no demand for the article. He looked forward for improvement and for a renewal of the Reciprocity Treaty with the United States. He concluded by moving the adoption of the report, which being seconded by Mr. A. Gillespie, deputy-governor, was carried unanimously.

The proposed dividend of £1 per share, payable on and after the 16th March, was then declared. Mr. H. W. Hencker, from Sherbrooke, the Canada commissioner, gave the proprietors a detailed and highly interesting account of the condition and character of their property, both the town of Sherbrooke and their landed estates.—*Investors' Guardian.*

Mining.

NOVA SCOTIA GOLD FIELDS.

(From our own Correspondent.)

Halifax, April 6, 1869.

The project of establishing a Stock Exchange in Halifax has been temporarily abandoned, and the interest, here and abroad, in the gold mines is becoming confined to a very limited circle. Yet an industry producing at the rate of seven shillings sterling per day to all engaged in it; which has been the means of creating prosperous settlements where before all was waste or wilderness; which has produced over three million dollars from the barren soil, and which already has yielded a quarter of a million dollars revenue to the Province, should be worth sustaining and expanding. The managers of the properties which have contributed so much to the reputation of the country promise better returns for 1869 than any preceding year has given; and with prosperity must come confidence. There will be very little speculation this year, but when investments are made they are likely to be made more discriminatingly than heretofore. The following is the summary of news from the outlying districts:

Tangier.—The Strawberry Hill Company crushed 125 tons of quartz in March, and obtained 225 oz. 10 dwt. of gold from the same. The mine is looking well. The new lode discovered in January, and now called the "Hill" lode, is of good promise. The manager, Mr. Forrest, reports; "We crush about twelve inches of quartz and slate, and thus far have taken out one ounce to the ton. The Forrest lode averages 3 oz., the Dunbrack 16 dwt., and the Wallace 12 dwt. Messrs. Estey & Barton still continue working on a small scale with very good success. I look forward to stirring times this summer." At Mooseland some men are at work on the property of Messrs. Fletcher & Neilson.

Uniacke.—The Mount Uniacke Co.'s yield for March will be about 100 oz. The Montreal Co.'s shaft has lately produced some rich specimens, which the manager has forwarded to the company's office at Montreal. The works have been slightly interrupted by water. The Queen and Central Companies are working on a small scale. The quartz from the LaMothe areas yielded 19 dwt. to the ton—within 1 dwt. also of the previously given estimate.

Oldham.—The Shaffer lot, now owned by Messrs. Tobin & Canning, of this city, continues to make satisfactory returns, though the last crushing of an ounce to the ton was under former averages. This district, however, is reviving in favor.

Isaac's Harbor.—Mr. Balcam is fitting up appliances for testing the alluvium, and the results are looked forward to with interest. The weather will not be favorable for extended operations until May.

Wine Harbor.—The tunnel in the Eldorado property was completed within ten feet. The engineer, Mr. Holman, has quite recovered from the effects of his fall, and although much shaken, is not maimed or injured, as previously reported. The Provincial Co. are working with a small force. An interesting fact concerning this mine, ascertained by the writer during a recent visit, is, that from a space of 300 feet in length by 100 feet in depth, $300,000 (three hundred thousand dollars) worth of gold was obtained. The Globe Co. produced, during March, 48 oz. 1 dwt. 4 gr. from 190½ tons. This is a small but steadily yielding property, the returns for December, January and March being 36¾, 45¼ and 48 ounces respectively. It contains two belts of lodes—the Wiscasset, 9 ft. 3 in., and MacKenzie, 11 ft. wide, The Napier is being laid out with a view to *permanent* and systematic mining. Three shaft houses are nearly completed, and the shafts so located as to facilitate thorough underground exploration of the whole property. Through the same are supposed to extend no less than eight belts of lodes, from five to eighteen feet in width—namely, the Middle, Mitchell, Washington, Great Western, Wiscasett, MacKenzie, Caledonia, and South belts, besides numerous separate lodes, varying from five to fourteen inches in width, which have been partially worked by the MacIntosh and Stadacona Companies.

It is expected that the properties eastward of the Napier, and the Temple property, will be opened up during the summer. The Eureka Co. had eight men employed, on contract work, stopping. In cross-cutting south from their eastern shaft, they came across a rich lode two and a half inches wide, and look for several more as work progresses in that direction. The mill is well finished, but was not in operation; and the statement that it had been rented by the Napier Co., although coming from a usually well-informed source, was found to be premature.

Sherbrooke.—The ice on the St. Mary's is beginning to give way, and was already dangerous to cross on Monday last. The projected harbor at Jegoggin is not in much favor with the people of Goldenville, and it is still uncertain whether a steamer will be placed on that route this year. The Palmerston and Dominion mines were still stopped with water. The Metropolitan is yet working. Some very rich ore was being raised from the Wellington, and a small but rich lode had just been discovered on the New York and Sherbrooke Co.'s areas. The Meridian and Delta and Crescent are reported to be looking favorably. The Woodbine was in successful operation. The new lode on the Canada showed many sights, some excellent quartz was coming out of Wentworth shaft. On the whole, prospects very encouraging, and unless appearances are deceptive, the gold yield for this month will above the average. The quartz from Cochran Hill had not all reached the crusher, and un several tons have been reduced (at Goldenville) found to be remunerative, it is not likely that owners of the mine will erect a mill of their ow The roads between Sherbrooke and New Glasg are in bad condition, and the journey now oc pies about sixteen hours—an average of less th four miles an hour.

Renfrew.—The manager of the Ophir mi Mr. Prince, brought to town last week a ba 248 oz., and spoke encouragingly of the fut prospects of the mine.

Waverley.—Professor Hind's Report is b being distributed, and may be the means of dir ing fresh attention to the district. The Bos and Nova Scotia Co. sent up 52 oz. before the cl of the month. A few men are working on trib and Mr. Burkner has let a contract to sink 50 60 feet on a newly discovered promising lode.

Montague.—The progress in this field is quite hopeful. The properties of Messrs. Lec & Co., Angus McQuarrie and Temple, are un development, and from the latter some rich sp mens were obtained last week.

Musquodoboit.—The Burnett property has b bought by Mr. Hyde, contractor, for ten thous dollars. The dispute with reference to the ten areas has not been settled. Mr. Burkner was town last week with further rich specimens, the surveyor, who had special business to call h again to the district, returned yesterday and ported increasing richness of the Burkner sou lode. Another disinterested and reliable info ant stated that he saw a piece of the lode brok off, weighing about two hundred pounds, and c taining at a low estimate one hundred dollars wo of visible gold. Notwithstanding all this there no excitement, and but few additional areas h been leased in consequence of these results. typographical (perhaps clerical) error occurs i report published under this head in the Monetar Times of 29th March; for "seventy-eight" re "twenty-eight" feet depth of soil, and for "fou five" read twenty-five" feet present depth of sh There are now twenty-six gold-bearing lodes op ed, and one has been tested at various points in course for two thousand feet, and everywh showed gold.

Fifteen-Mile-Stream.—Some rich specim from the Nonpareil property were seen by writer last week, at the office of Mr. J. W. Ja son, New Glasgow. The Pioneer mill (of 15 stam belonging to this company will ensure the ow ten free areas. The Halifax Mill (of 10 stamp belonging to Messrs. Chipman and Lockhart, is in successful operation. The Government has ceived over three thousand dollars in rents license fees from this district, but has failed return to make a traversible road.

Ovens.—The price paid for the McCulloch p perty was six thousand dollars. The adjoin McDonald property, bought by Mr. McCullo and offered to the same buyers, is still an op bargain, the sale having been communicated the writer by anticipation only. A steamer w be put on the western route early in May, and th give tourists and investors an opportunity of vi ing the long neglected western districts.

Gold River.—The systematic explorations c templated by the Gold River Exploration Co., other companies, are to be undertaken early ne month.

Yarmouth.—No results from this new fi but some miners from Sherbrooke, who have vi ed the mine, report a probability of successful extended operations.

Errata.—The average per ton of 2,240 lbs. 1862 to 1868 should read 18 dwt. 20 gr., instead

dwt. 10 gr. in the table published in issue of arch the fourth.

REVIEW OF MINING FOR PRECIOUS METALS IN CALIFORNIA IN 1868.

The weather in 1868 was favorable to mining. The supply of water was considerably above the average, and there was no extraordinary frost or flood to interrupt work in either the quartz or gravel mines.

In quartz there was little change. The mines which occupied a leading position in 1867 have it still, notwithstanding some variations. No great mine has fallen, nor has any new one risen. The Eureka, at Grass Valley, extracted about 18,000 tons of ore, and paid $280,000 of dividends last year, or an average of $23,500 per month. The Amador Mine, in fourteen months ending on the first of December last, worked 28,311 tons, and extracted $617,437, an average of $21.80 per ton. The dividends were $340,400, about $24,000 per month, or $12.02 per ton. The North Star, at Grass Valley, has produced $176,000 in the last six months, and $60,000 have lately been expended in extensive and important improvements; so that, according to report, the mine is now in a better condition than ever to pay regular monthly dividends. The gross production of the Empire Mine is is estimated at $240,000 for 1868. The Banner, at Nevada, produced $200,000 gross for the year. It turned out $44,000 in the last sixty days, but that was exceptional. The yield per ton is about $18, and the current monthly expenses about $9,000. The Sierra Buttes turned out $215,000 gross, an average of $14.50 per ton, and paid $138,000 dividends, an average of about $9.35 per ton. The Keystone Mine, Amador County, yielded $188,588.15 for the calendar year, the average per ton being about $16. The Quail Hill Mine, as worked during the early part of the year with stamps, did not pay expenses, though the tailings were rich in the assays; so a Howland's rotary crusher, which bears some resemblance to a big coffee mill, was set up, and four tons were run through it daily, and then worked in two Wheeler pans. The result was that $35 were saved to the ton, and the tailings left from the old workings paid from $10 to $25, the latter sum having been obtained from the tailings nearest the mill. This experiment was tried for four months, and the success being considered certain, the mill is to be remodelled, and the work resumed next spring. The Whiskey Diggings Mill, in Placer County, which was at work on a similar deposit, has been idle for a long time, and we have no information from it. Whether the success at Quail Hill will lead to a trial of the same machinery there is unknown to us.

The Mariposa estate is in the hands of Mark Brumagim, J. A. Stewart, and J. J. McEwen, Trustees, who are now preparing to work the Josephine Mine. The dam across the Mereid River is completed, and the mill will soon commence reducing by the Langren and Ryerson process on a larger scale than ever before. The miners are now taking out ore from the Josephine, and rumour says that it will yield at least $25 per ton, and that the amount in sight equally as good is considerable. The Bear Valley Mill, which was burned down in the summer, will not be rebuilt, having been in an unfavourable situation. A very rich lode, known as the Petticoat, near Mokelumne Hill, and several in Sierra County, have been opened, but their production has not been large as yet. Two quartz mills have been erected in the Soledad District, 30 miles from Los Angelo, and the reports from them are favourable.

In placer mining there has been a steady decline. The Chinese, who did most of the shallow mining a few years since, have been employed on the railroads in such numbers that the rivers and ravines have been neglected, but next summer many of them will get back to their old haunts. Several good hydraulic claims have been worked out, and others have been beset by difficulties of drainage, so that consolidation has been necessary. The Blue Gravel Mine, at Smartsville, still maintains its pre-eminence among the placer mines of the State. Its gross yield last year was about $200,000, of which probably 55 per cent. was net. A few days since, a blast of 15 tons of powder, the largest ever used for gold mining in this State, was let off in the Blue Point claim, at Sucker Flat, to loosen the gravel for hydraulic washing. Several large tail sluices were commenced last summer, but none of them have been finished.

The trial near Cisco of the Hagan furnace for roasting ore by burning water was one of the notable events of the year. A small woodfire is kindled in the fireplace under the ore, and as soon as it burns well, steam is turned on through pipes which pass over the fire, and the doors are closed as tightly as possible, so as to exclude all draft, and thus compel the fire to take the oxygen from the steam while the hydrogen burns and serves as fuel. Those who have witnessed the trials declare the new process a certain success, and a large furnace is now being built at Angels. The expense of roasting the ore of the Enterprise Mine near Cisco was reported at $1.50 per ton, the largest pieces of ore being of the size of a goose egg. The Giant Powder has been introduced in mining with a decided saving. On account of its greater explosive power, a smaller drill hole is sufficient; one man can hold and strike the drill at the same time, and the drifts may be much smaller than when large drills are used. In the New Almaden Mine it was found that to cut a drift with common powder cost $65 per yard, and with Giant Powder $45.45—a saving of $19.55, or 29 per cent.

But in all cases where a one-man drift would serve the purpose, the saving by using Giant Powder would be nearly if not quite 50 per cent.

A new and valuable process of chlorination for silver ores containing base metals has been patented by Kustel and Hoffman, of this city. The ore is crushed to pass through a number three screen, and is then roasted for two hours with not more than two per cent of salt, after which it is subjected to the ordinary gold chlorination process, and then leached with a solution of hypo-sulphate of soda to dissolve and carry away the silver, which is precipitated by sulphide of sodium. Those familiar with the customary methods of reducing argentiferous ores containing large proportions of base metals will perceive that this a simple and cheap mode of reduction. It will not cost more than $12 per ton.

In the beginning of the year the Supreme Court rendered a decision that the exemption of mines from taxation was unconstitutional, and it was supposed that there would be an addition of $10,000,000 or more to the tax of the State in consequence; but so far we have not heard that any assessments on mines have been made save in Sierra County, where the Butte Mine was valued at $300,000 on the tax roll! It may be that the assessments have been made in the other counties, but that they are not considered of sufficient interest for publication. It is scarcely probable that the assessors would undertake to reverse the judgment of the Supreme Court.—*Exchange.*

Insurance.

Fire Record.—Port Rowan, April 16.—John Winch, merchant, near Langhton, 12th concession, Walsingham, was burned out yesterday—store and dwelling house. Loss about three thousand dollars.

St. John, N.B., April.—Frost's drug store sustained considerable damage; insured for $1,500; cause unknown.

Mitchell, April 19.—A large and destructive fire on Sunday morning about 3 o'clock broke out in McQuade's grocery, rapidly spreading east and west, destroying George Barnet's grocery and liquor store; George Ritz's furniture and stove warehouse, Stephen's building; Porter's dry goods store and Town Clerk's office; Sinclair's hardware store and part of the large brick building owned by E. Millar, of Hilbert, and occupied by Peterson & Hustou. All parties were partially insured, excepting Mr. Millar, his policy having expired a few days previous. Mr. Barnet's loss is estimated at about $2,000; Porter's, $2,000; McQuaid's, $600; the others not heard from yet. All the Corporation property was saved. Property covered by policies—$13,642. Nothing saved.

Port Colborne, April 20.—Lightning struck the barns and sheds of Samuel Springer, third concession, Humberstone township, burning them, and their contents of grain and hay. Loss about $1,200. Insured for $600 in the Agricultural Mutual, of London. The cheese house of Josse Steele was also struck, and the end of the building knocked out. The barn of Owen Kinseley was struck, but no damage done.

Mitchell, April 19. The barn owned by Mr. Frank Oliver, of Hibert, was struck by lightning last night and totally destroyed, together with all the farming implements and two horses. Loss—$1,000. No insurance.

Belleville, April 16.—A frame building occupied by three families, adjoining Wallace's grist-mill, was consumed; no insurance on building; furniture mostly saved.

St. Louis Suburbs, Quebec, April 13. The stables and dwelling of M. Leady, carter and D. Fitzpatrick; Leady's insurance was $200; Fitzpatrick's, $100.

Quebec, April 13.—A house belonging to E. Michon, of Quebec, was destroyed by fire in Charlesbourg; insurance $250.

North Merrickville, Ont., April 10.—An occupied frame house, owned by Charles Holden, was totally destroyed; no particulars.

Dawn Mills, Ont., April 13.—Store of W. A. Ward; no insurance; the goods were mostly removed.

Wellington Square, April 15.—A fire took place near Wellington Square Station, on the farm of John Waldie, merchant, this afternoon, at half-past one. The barns and sheds adjoining were destroyed. There were four sheep and four lambs, a fanning mill and other farming utensils, besides some eight or ten bushels of corn and a small quantity of hay and straw consumed by the fire. There was some difficulty in saving the stable and driving shed. It is not known how the fire originated. His man states that there was no one in the barn since morning. Mr. Waldie being in Montreal, I cannot ascertain whether his loss is covered by insurance or not. Loss about $800.

Financial.

TORONTO STOCK MARKET.

(Reported by Pellatt & Osler, Brokers.)

The business of the week has been unimportant, and with the exception of Building Society stocks and County debentures, the supply has in nearly all cases exceeded the demand.

Bank Stock.—Limited sales of Montreal were made at 144½ and 144¾, there are buyers at the latter rate. Small sales of British American were made at 105¼, at which rate there are buyers. Ontario sold at par, sellers generally ask 100¼. There are buyers of Toronto at 120 and sellers at 121. Small sales of Royal Canadian were made during the week at 78, 78½ and 79, very little offering under 80. Several sales of Commerce took place at 102½, at which rate it is still procurable. There are sellers of Gore at 39 and no buyers. Merchants sold at 107½ and 107¾, there are buyers and sellers at these rates. Sales of Quebec were made at 101½, buyers would now give 102. Molson's closed dull at 107½ to 108. Considerable sales of City were at 101¾; there are buyers now at 101½, and sellers at 102. Buyers offer 108½ for Du Peuple, none in Market. For Nationale 108 would be paid, none offering. There are buyers of Jacques Cartier at 109½, and sellers at 110. Buyers offer 105½ for Union, with sellers at 106.

Debentures.—Dominion stock is wanted; little doing in Canada bonds. Toronto would be readily taken at rates to pay 6¼ per cent interest; none in market for weeks past. Large sales of first class county have been made at high rates.

Sundries.—Small sales of City Gas were made at 107 to 107½; limited amounts are still procurable at the latter rate. Very little doing in Building Society stock; Canada Permanent is offered at 126 with buyers at 125½: Small lots Western Canada are obtainable at 121. Freehold is in demand at 112. Montreal Telegraph is wanted at 133½, sellers ask 134. For Canada Landed Credit 79 would be paid, none in market. Money is scarce and in active demand.

Finances of Niagara.—The Auditors' Report of the town of Niagara has been published. During last year, the revenue from all sources, including a balance of $884:11 on hand from 1867, amounted to $7,038:11, and the expenditure to $5,993:70, leaving on hand on 1st January, 1869, $1,044:31. The expenditure for common school purposes amounted to $1,784,09½. Only $1,797.08 was collected in 1868 as taxes. The liabilities of the town are stated to be $59,018.55, and the assets $95,079:40 as follows:—Taxes in arrear, $2,896:09; rents due, $939; stock in and due from plank road, $4,240; mortgage on Erie and Niagara Railroad, $45,000; interest due on said mortgage, $7,500; court house and other buildings and four acres of land, $25,000; brick school house, $4,000; fire engines, hooks and ladders, and hay scal $1,000; R. N. Hotel stock $8,009; cash on ha $1,044. total, $95,079:40.—*St Catherines Journ*

BANK OF ENGLAND.

Week ended, April 3.—The Bank return p sents some important changes this week, the st of bullion having diminished to the extent £462,202, whilst the reserve has decreased as m as £1,137,302.

The following are the particulars as compa with the preceding week:—

Rest	£3,689,53
Decrease	5,87
Public Deposits	7,891,04
Increase	384,03
Other Deposits	17,479,29
Increase	445,84

On the other side of the account:—

Government Securities	£14,999,05
Increase	1,000,00
Other Securities	20,130,81
Increase	1,006,32
Notes unemployed	7,862,20
Decrease	1,119,88

The amount of notes in circulation is £23,61 525, being an increase of £675,100,

Railway News.

THE BANK CHARTER QUESTION.

GOVERNMENT PAPER AND GOVERNMENT CREDIT.

VIII.

The issue of state notes, intended to circulate as currency, is generally the last desperate financial resource of a government. The existence of such paper is proof of embarrassment, of deranged finances, is redolent of deficiencies: it is the worst form of a floating debt which it is impossible to wipe out, and difficult, if not impracticable, to fund. Instead of representing the results of labour, it fills the gap of inordinate, and, almost always, unproductive consumption. The issuer, unlike a bank, possesses no capital as a guarantee for the redemption of the paper; the notes are not issued in exchange for commercial bills, which, drawn by solvent persons, would themselves be sufficient to redeem the notes. But, it will be said, the government has the resource of taxation, and the whole property of the country is pledged for the payment of its debts. Such terms as these, though in constant use, are really without meaning. The issue of the notes was proof that the resource of present taxation had been exhausted; and as there is no way in which the property of the nation can be made to answer for the debts of the state, except through taxation, it is evident that the payment of the notes must be postponed until additional taxes, which it is now impossible to levy, can be raised. As for selling the whole property of the nation, or any portion of it, to satisfy the demands of public creditors, the operation is manifestly impossible. If all the property of the nation were offered for sale, there could be no buyers; and if the property of particular individuals were arbitrarily selected for sacrifice, a feeling of common danger would prevent any one from purchasing. We have the proof in an applied test, in at least one municipal corporation of Ontario.

If the state notes be issued to a bank, instead of being issued to the general public, the obligation to redeem them is the same; and if a reserve of specie, equal to one-fifth of the amount, be held for their redemption, it follows that no provision is made for the remaining four-fifths. We say no provision, because, as we have seen, there is no capital in the transaction, and the maker of the notes parted with them to fill the void of a contracted debt, and not in exchange for commercial paper representing valuable commodities, which, in due time, would suffice to cancel the notes. The bank will not part with them without an equivalent; but that is its own affair, and will not enable the government to provide a guarantee for the redemption of the notes.

The conjunction of the credit of a bank and a government has before now given rise to the worst delusions of over-confidence. The case of Laws' Bank may be cited in proof; there the original shares went up to many hundred times the figure at which they were originally issued. But the recoil, when it comes, corresponds in depression to the original outburst of enthusiasm, and the effects of the catastrophe are universally felt. All legislative attempts to arrest the downward course are always ineffectual for that purpose, and often accelerate the descent. The consideration that a government cannot be sued like an individual without its consent, or be made amenable to laws which oblige individuals and corporations to pay their debts, is, at this stage, felt with its utmost force.

Sometimes the credit of the government takes another shape, and is largely substituted for the capital of the bank. This complexity is traceable in the National Bank system of the United States, with a modified but dangerous copy of which, there is reason to believe, the country is now threatened. The notes issued under such circumstances must partake of the nature of their origin. Credit, like a great many other things, is excellent when used in moderation and with discretion; but it presents nothing but danger when pushed to excess. The substituting of government indebtedness for the capital of a bank is an inevitable cause of discredit. Whenever the credit of the paper circulation depends upon the government, it will follow the latter in all its varying fortunes. When, from any cause whatever, the credit of the government sinks, the paper will fall along with it, to the general derangement and confusion of all private and business transactions in the country. Such paper is, of all possible kinds, most ill adapted for the purposes of currency.

ELASTICITY A REQUISITE OF CURRENCY.

IX.

In every country the amount of currency fluctuates at different periods to accommodate itself to the volume of transactions in which its instrumentality is requisite. In England, the periodical payment of the interest on the public debt causes a temporary expansion of the currency, which is, however, short-lived. In Ireland, the currency reaches its lowest point just before harvest, and attains its greatest volume in January. In Scotland, the two great periods of expansion are in May and November, when the interest on mortgages and annuities is chiefly payable. It is in evidence before a committee of the House of Commons, that these fluctuations are in the proportion of three to seven: that the minimum circulation is three and the maximum circulation seven millions sterling. In other words, that it requires a currency of seven millions to maintain a circulation which, for the whole year, averages only three millions. Coming to our own country, we find that the circulation reaches its lowest point in July or August—just before the grain crops begin to come to market—and that it attains its highest point in October, when the bulk of the harvest is passing from the producers to the consumers. Between these two periods in 1865, the expansion was, in round numbers, six millions; in 1866, four millions; in 1867, two millions; and in 1868, three and a quarter millions. These facts show the necessity of the currency being sufficiently elastic to meet the varying demands of commerce. That element is not to be found in government notes, and almost as little need it be looked for in any system copied from the National Banks of the United States. Government notes admit of a fatal expansion, though of scarcely any contraction through redemption. National Bank notes, on the contrary, have a pre-

scribed maximum which cannot be overstepped, no matter what are the necessities of commerce. It would be a mistake to suppose that ten millions of bank notes would imply a uniform circulation of that amount. At no time could the banks get on without a reserve, of greater or less amount, of notes in their vaults, so that to issue a given amount of notes would not ensure a circulation of that amount.

If experience has proved anything, it is that all special restrictions applied to the limits of a bank currency are false in principle and fatal in practice. Whenever any undue pressure comes in England, the restrictions imposed by Sir Robert Peel's Act have to be arbitrarily and illegally removed. It would be unspeakable folly to adopt in this country a principle that has worked so badly elsewhere.

TORONTO AND NIPISSING RAILWAY.

The indefatigable and zealous promoters of this railway have launched their scheme fairly before the public, with an array of facts and figures which must carry conviction to the most cautious and the most calculating minds. While the citizens of Toronto, and the farming population, whose interests this railway will especially serve, have a direct and personal concern in its success, the people of the Province of Ontario, as beneficiaries, more or less affected, cannot remain indifferent to its prospects. Though the country through which the first section of the road will pass is wealthy, extensive and populous, but hitherto destitute of railway facilities, the region beyond, which awaits tapping, is one boundless in undeveloped resources, and at present, "the forest primeval" there holds sway. We have railways which carry immigrants through the country; we want a few more that will carry immigrants into it. Railways are the best colonizers, and certainly have not been found bad emigration agents. Hence it is that we await the completion of this Nipissing railway with a real interest. It will bring to Toronto the trade of a large region of country, but it will also open up to colonization lands hitherto valueless and useless.

As regards the first eighty-five miles of road, with the Lindsay branch of eighteen miles, the capital is placed at $1,275,000. Bonuses to the amount of $399,000 have been already voted by various Municipalities, and $155,000 is expected. Stock to the amount of $400,000 in $100 Shares is now on the market, and it is for investors to judge from the statistics furnished in the Company's prospectus, whether or not the inducements to subscribe are sufficiently tempting. So far as our opinion goes, we think they are, and we shall be surprised if local capital, to the required amount, cannot be easily procured. The local traffic of the Northern Railway for three years shows an average earned dividend on $15,000 per mile, of 12 5-6 per cent. The estimate of gross receipts of traffic in timber, lumber, cereals, passengers, &c. likely to be carried on the Toronto and Nipissing railway is $446,000 per annum, for the first eight or ten years, and allowing 60 per cent. for running expenses, the net earnings would be $179,400, or 14 per cent. on a cost of $15,000 per mile. As the actual cost of the road to the Company will be $10,000 per mile (the bonuses covering $5,000 per mile) the dividend from such net earnings would be 21 per cent. After making a liberal allowance for contingencies the margin afforded is still large.

As a line of railway, such as the proposed Toronto and Nipissing will be, cannot fail to promote the growth of the section through which it will pass, as well as benefit the province by the opening up of new territory, now part of the public domain, the Government will see the justice of coming to the Company's assistance and ensuring the completion of the whole project. The steady increase in the receipts of the Northern shows how a railway which serves a new territory can build up a business for itself. The road has been chiefly dependent on freight for its revenue, and the expansion of that revenue from $240,044 in 1859 to $561,370 in 1867, shows how rapidly traffic extends. The traffic of the Toronto and Nipissing will be of the same elastic character; and as the country is opened up and peopled, the effect will be felt in a large increase in receipts.

PROPOSED LEGISLATION.

The Government have announced that they propose to introduce during the present session of the Dominion Parliament, measures respecting bankruptcy and insolvency, and patents and discoveries. In the Governor's speech it is stated, "The charters of several banks are drawing to a close, and the important subjects of banking and currency will be brought under your notice. In considering these questions, which so deeply affect not only the important interests of commerce but the daily transactions of life, I feel assured that you will endeavour to adopt the greatest measure of safety to the public, without curtailing the facilities requisite for the encouragement and extension of trade." The general impression is that the Government proposes to substitute for our present system of banking, a modified form of the United States National Bank System.

—The receipts at the P. E. Island Treasury, for the past year, are stated to have been £83,391; the expenditure £92,400, shewing an excess of expenditure over revenue of £9,000.

LONDON CORRESPONDENCE.

(From Our Own Correspondent.)

London, April 1, 186

In the course of a week or ten days the Chancellor of the Exchequer will present his budget to the House of Commons. That the tale he will then have to tell cannot be satisfactory is already now certain. The publication to-day of the revenue returns for the last quarter of the financial year has rendered it clear that the revenue has fallen short of the anticipation formed two months ago. The elasticity which it lost some years since, has not yet been regained, Instead of the pleasing story of a progressive increase the returns, which it often fell to Mr. Gladstone's lot to relate, Mr. Lowe will have to explain and apologize for a state of things which would be disheartening were it not obviously due to exceptional causes. Some blame attaches to Mr. Ward Hunt, the Chancellor of the Exchequer in Mr. Disraeli's administration, who framed last year's budget. Irrespective of the expenditure incurred owing to the expedition to Abyssinia, for which special provision was made, there was an omission in providing for the ordinary outlay of the year. At least a million sterling should have been added to the estimated out-goings. The estimated receipts were £73,150,000; the yield has been £72,591,000. Thus it will be seen that the deficiency exceeds half a million sterling. Had it not been for a windfall of £225,000 in the miscellaneous receipts the deficit would have been by so much the greater. The most instructive items in the account are those relating to the Customs and the Excise. In the Customs the decrease amounts to a quarter of a million. The Stamp duty has also yielded £323,000 less than in the preceding year. These facts indicate a great falling off in commerce and a serious depression in trade. On the other hand, the circumstance of the increase in the Excise returns being £300,000, while the profit from the Post Office has increased by £30,000, goes to prove that the internal state of the country is satisfactory. Even with the drawbacks I have enumerated, the revenue returns would furnish grounds for rejoicing, were it not that the Abyssinian bill is still unpaid. The estimates for the ensuing year are framed so as to save the country nearly three millions sterling. Under ordinary circumstances this saving would have sufficed to convert the deficit of the moment into a surplus for the future. Unfortunately, however, the money must be found to pay for our triumph in Abyssinia. This is the difficulty which the Chancellor of the Exchequer must face and overcome. That Mr. Lowe will not content himself with producing a simple and uneventful budget is what I firmly believe. Moreover, I incline to think that he will so re-adjust the burden of taxation as to justify him in remitting taxes. It is possible for a really skillful Chancellor of the Exchequer to make a surplus. Mr. Gladstone did this more than once. By reducing the duties on articles of daily use he so increased their consumption as to make the amount yielded by the lesser tax fall in excess of that obtained from the greater. It is yet to be seen if Mr. Lowe is in possession of this invaluable financial secret.

The Hon. Beverly Johnson has just given expression, at Newcastle, to his views relating to Free Trade. Professing to be a free trader on principle, he is shocked at the imperfect way with which Great Britain applies the rules which govern her commercial policy. He objected to sea-going vessels being taxed to maintain light houses. He thought it unfair to tax American tobacco and American whiskey. To many persons this may seem a conclusive answer to the boasts of English free-traders. As the American Ambassador's speech will be read, no doubt, on the other side of the Atlantic, by those who take delight in upholding the doctrines of protection it may be useful to point out to your readers the fallacies which lurk in Mr. Johnson's argument

here may be impolicy, but there is no injustice in vying duty on sea going vessels for the perpose building and maintaining light-houses and eacons. Nor can foreigners allege that they are l-treated in this respect, for they are on a footing perfect equality with English subjects. They nnot reasonably expect more than this. In like anner, American tobacco and whiskey are taxed the same rate as tobacco imported from Brazil Manilla, and as spirits imported from France. regards whiskey, the home producer is subject the competition of the foreign importer. As re-rds tobacco. the foreigner has the advantage of monopoly, inasmuch as the law forbids the owth of tobacco in the United Kingdom. If y one has a reason for complaining about free-m of trade being violated, in this case it is the itish agriculturist and not the American planter. is noteworthy that the upholders of protection e always shocked at what they conceive to be a sregard of free-trade doctrines on the part of nglish statesmen. They forget that these doc-nes would be none the less admirable if repu-ated by all the writers and by rulers in this untry. So far from being the model country of e-traders, England is still a land of anomalies, hich political economists view with dislike. et, in affirming that as a commercial policy free-de is the only true one, and in acting on this inion with undeniable pertinacity; at no little rifice, England may claim to lead the van of a ovement destined some day to make the circuit the globe.

The meeting of the Hudson's Bay shareholders, hich was appointed for the 7th, is postponed till e 9th inst. At present the feeling among them adverse to the acceptance of Earl Granville's oposal. On reflection, they consider the amount be paid by Canada wholly disproportionate to e sum which they may have to pay hereafter in xes to the Canadian government. Should they ntinue in this temper, the question will be sub-tted to the Judicial Committee of the Privy uncil. This will be anything but a gain to nada, even should the decision be in her favor. ll the award be made nothing can be done, and e Company will continue to hold its own. eanwhile, the question of settling the North estern boundary would not be simplified. A lay of a year or two is to be deprecated for sons of sound policy. It is to be hoped then at the shareholders will take the advice ten-ed by the directors, and close at once with rl Granville's offer. Seventeen hundred dis-ntented sharcholders are not, however, easily dlt with and induced to follow the course chalked t for them by their well wishers.

The newspapers are still filled with complaints out the way in which many Life Assurance Cos. nduct their affairs. Now that Parliament has assembled, a discussion on the subject may be ked for at no distant date. One company has ently issued a lot of rules designed to afford e maximum of security and convenience to the icy holders. It is a Manchester company, and alled the British Imperial Insurance Corpora-n. Its rules provide for the whole of the net miums being invested in consols in the names the trustees whom the policy holders may elect. ere is a periodical audit on Dr. Farr's system. any time the policy holders may draw in whole in part to the extent of 70 per cent. of the miums paid.

ENGLISH BANKRUPTS.—There were 9,195 cases bankruptcy in England and Wales last year. the total number, 817 adjudications were on petition of the creditors, 6,679 on the petition debtor, 1,152 by registrars at the prisons, 532 petitions *in-forma pauperis*, and 15 on judg-nt debtor summonses. The gross produce lized from bankrupt estates was £852,039 11s. which creditors' assignees realized £542,309 8s. . and the official assignees, £309,730 2s. 1d.

STATEMENT OF BANKS

ACTING UNDER CHARTER, FOR THE MONTH ENDING 31st MARCH, 1869, ACCORDING TO RETURNS FURNISHED BY THE BANKS TO THE AUDITOR OF PUBLIC ACCOUNTS.

NAME OF BANK	CAPITAL.		LIABILITIES.						ASSETS.								TOTAL ASSETS.
	Capital authorized by Act.	Capital paid up.	Promissory Notes in circulation not bearing interest.	Balances due to other Banks.	Cash Deposits not bearing Interest.	Cash Deposits bearing interest.	TOTAL LIABILITIES	Coin, Bullion, and Provincial Notes.	Landed or other Property of the Bank	Government Securities.	Promissory Notes, or Bills of other Banks.	Balances due from other Banks.	Notes and Bills Discounted.	Other Debts due the Bank, not included under foregoing heads.

Commercial.

Toronto Market.

There were a good number of buyers in town during the past week, but business drags owing to a generally cautious feeling among both buyers and sellers of imported goods. The warm showers have removed the frost from the ground, so that ploughing and seeding have commenced. The winter wheat looks uncommonly beautiful—a circumstance which will have a favorable effect on general business.

GRAIN.—*Wheat*—Receipts 3,540 bush., and 4,280 bush. last week. Spring is dull dull and nominal at 95c. to 96c. f.o.b.; there are no buyers. Sales, a cargo lot of 10,000 bush. at 95c., f.o.b. at Whitby, and 400 bushels here, May delivery, at 95c. f.o.b. bagged. Fall is exceedingly dull, there is no enquiry whatever; holders ask $1.00 to $1.05; no sales. *Barley*—Receipts 500 bush., and 350 bush. last week; the stock is very small, and there is no demand; what little comes in by waggons sells at $1.10 for seed. A lot of 3,000 bush. sold at $1.10 f.o.b. bagged. Grand Trunk barely is unsaleable. *Peas*—Receipts very light; market quiet; holders ask 75c. to 78c. for good samples, with buyers at 70c. to 75c. *Oats*—Receipts 1,800 bush., and 3,600 bush. last week. Car loads are selling at our quotations on the railway track. *Rye*—Selling on the street market at 60c. *Corn*—Quiet at quotations; two cars No. 1 sold at 65c., and one car at 63½c, at Brampton; one car 64c. *Seeds*—Timothy is a little better; prices range from $2.40 to 2.70. Clover, though the stock is not heavy, the near approach of the close of the season makes buyers disposed to realize; prices are therefore a little down at $5.75 to $5.90. Flax $1.65 to $2.00.

FLOUR.—Receipts 3,350 bbls., 4,280 bbls., last week. The tendency of the market has been toward lower prices; while at the close holders of No. 1 superfine asked $4.10, and buyers would give about $4.05 for good brands. Sales 700 bbls. at $4.05 f.o.b., and 600 bbls. at $4.10 at Weston. A lot of 900 bbls. choice sold for May delivery at $4.15 for shipment east, the advance on current market rates being more than compensated by the reduced rates of freight at which the steamers are now contracting for the lower ports. On Tuesday a lot of inspected Spring Extra offered on Change at $4.10 without finding a buyer. Fancy is steady, 200 bbls. sold at $4.20 on cars at Georgetown, and 100 bbls. at $4.25 here, which is an outside figure. Extra is held at $4.50 without sales; there is no demand except at a considerable reduction on that figure. No Superior in market. *Oatmeal*—Ordinary brands are worth $5.40 to 5.50, and choice $5.50 to $5.65 for retailing purposes. *Cornmeal*—Unchanged.

PROVISIONS.—*Butter*—The market is unsettled; fine dairy sells at 22c. to 23c. in a retail way; ordinary unsaleable. *Eggs* are worth 12½ to 13½ in quantity. *Mess Pork* dull at $25.75 to $26.00 in small lots. *Bacon*—There is a fair jobbing demand at 12c. to 12½c. for Cumberland, and 11c. to 11½c. for ordinary. *Hams*—are held firmly, but there is not much demand. *Lard*—dull, and selling in retail lots at 16½c. to 17c. *Cheese*—scarce, fine qualities are fully 1c. higher; a lot of 60 cheeses sold at 14¾c.

PETROLEUM.—There is only a very moderate business doing at unchanged prices.

HIDES AND SKINS.—The market is weak and prices are lower as quoted.

FREIGHTS.—Though the season is open there is very little doing with vessels. They are offering to Toledo at 5c., and to Oswego at 3c., U. S. Currency, on grain. Fright steamers are contracting for flour to Halifax at 75c. The Grand Trunk have issued their summer tariff: Flour, Toronto to Kingston 25c., grain 13c., to Prescott 30c., grain 15c., to Montreal 35c., grain 18c., d tto St. John 85c., to Halifax to 90c. Freights by the Great Western Railway, to all points, unchanged.

Halifax Market.

BREADSTUFFS.—April 13.—Our markets for Supers for the past week evince no change. The demand for No. 2's still increases. White Wheats continue dull, sales of small parcels only being effected at low prices for better description of city trade. There is some enquiry for Oatmeal, but demand continues limited, and stocks are still large. Cornmeal inactive at former quotations. Rye dull and unchanged. White Beans in limited request at quotations.

White Wheat Extra (Fall) $6.25 to $6.50. Fancy $5.90 ao $6.00. Supers $5.60 to $5.65. No. 2, $4.75 to $5.00. Middlings $4.50 to $4.75. Cornmeal K.D. $4.10 to $4.15. F. G. $3.80 to $4. Oatmeal $7 to $7.25. White Beans $2.50 to $3.

WEST INDIA PRODUCE.—Molasses is very dull, and price, somewhat easier. Sugars continue in light receipt and firm. Rum dull and unchanged. Coffee offered freely without buyers, low prices would be accepted for round lots. We quote:—Sugar, V. P. 10½c. to 11c. Porto Rico 9½c. to 9¾c. Barbadoes 9c. to 9½c. (nominal). Molasses Cienfuegos 41c. to 42c. Trinidad 40c. to 41c. Rum 58c. to 60c. for Demerara.

OIL.—(Pale Seal) 75c.; Straw 65c.; Brown 45c.; Cod 55c.; Dog 45c. Kerosene—Am. 48c. to 50c. Canada 36c. to 38c.

THE TORONTO, GREY AND BRUCE RAILWAY COMPANY.

TOTAL LENGTH, ABOUT 200 MILES. INCLUDING BRANCHES TO KINCARDINE AND OWEN SOUND.

Length of First Section, from Toronto to the Garafraxa Road, about 70 Miles.

TOTAL CAPITAL, $3,000,000.

CAPITAL REQUIRED FOR THE FIRST SECTION, $1,050,000.

Bonuses already Voted by Municipalities for the First Section of the Main Line, $425,000.

As follows:—City of Toronto, $250,000; Albion, $40,000; Caledon, $45,000; Mono, $45,000; Orangeville, $15,000; Amaranth, $30,000.

Bonuses yet to be obtained for the first section, $77,000.
Bonuses required and obtainable to extend First Section, from Arthur to Mount Forest, $138,000.
First issue of Stock in $100 shares, $325,000.
Upon which bonds will be issued for $300,000.
The arrangements for the extension to Mount Forest, now in progress, when completed, will involve the further issue of Stock and Bonds to the extent of $125,000.

PRESIDENT—John Gordon, Esq.
VICE-PRESIDENT—A. R. McMaster, Esq.

DIRECTORS:

Hon. M. C. Cameron, Provincial Secretary; Hon. John McMurrich, M.P.P.; S.B. Harman, Esq., Mayor of Toronto; Noah Barnhart, Esq.; H. S. Howland, Esq., Vice-Pres. Bank of Commerce; James Michie, Esq. (Fulton, Michie & Co); John Crawford, Esq., M. P; William Elliot, Esq. (of Messrs. Lyman, Elliot & Co.); Thos. Swinarton, Esq., M.P.P.; R. A. Harrison, Esq., Barrister, M.P.; J. E. Smith, Esq., Collector of Customs, Toronto; D Sinclair, Esq. M.P.P., North Bruce; John Turner, Esq (of Messrs. Sessions, Turner & Co.) George Laidlaw, Esq; Thos. Scott, Esq., M.P.P.; Robert Paterson, Esq.; Thos. Lailey, Esq.; T. C. Chisholm, Esq.; Frank Smith, Esq.; C. J. Campbell, Esq.; Adam Crooks, Esq., Q.C.; John Worthington, Esq.

TRUSTEES OF BONUSES—Hon. John McMurrich, Company's Trustee; A. W. Lauder, M.P.P., Government Trustee; Lewis Moffat, Esq., Municipalities' Trustee.

COUNSEL—Hon. John Hillyard Cameron.
SOLICITOR—W. H. Beatty, Esq.
CONSULTING ENGINEERS—Sir Charles Fox & Sons.
BANKERS—Bank of Toronto, Bank of Commerce.
BROKERS—Campbell & Cassels, Blaikie & Alexander.
SECRETARY—W. Sutherland Taylor.

TEMPORARY OFFICES, 46 FRONT STREET, TORONTO.

PROSPECTUS.

The Provisional Directors of the Toronto, Grey and Bruce Railway Company, finding that further progress in the building of Broad Gauge Railways in Canada, with English Capital, was no longer financially practicable or expedient for lines of Railway projected for local traffic, and having become cognizant of the successful working for a number of years of Railways built on the three feet six gauge in the Kingdoms of Norway and Sweden, in the Colonies of Queensland, in India, and elsewhere, and that these Railways were capable of accommodating a traffic of about a million, or a million and a half of tons of goods per annum, and of carrying passengers at a speed of twenty-five to thirty miles an hour, and that the traffic of the Northern Railway of Canada has not exceeded 195,000 tons, and 140,000 passengers per annum, have therefore resolved to construct the Toronto, Grey and Bruce Railway on the three feet six inch gauge, in the most economical and efficient manner, at a total cost of $15,000 per mile.

The Directors have also noted Capt Tayler's (now Vice President Grand Trunk Railway) report on the Festiniog Railway, two feet gauge, in Merionethshire, Wales, whose freight and passenger traffic of which approximates closely to that of the Northern Railway of Canada, and, with the exception of the lumber traffic, largely exceeds that carried on the Lindsay and Port Hope, or on the London and Port Stanley Railways.

With a view to the just apportionment of the risks incidental to capital invested in railway enterprise in Canada, it was also resolved to ask the municipalities to be benefitted by the construction of the Railways, one-third of the total cost by way of bonus or gift. The proportion of the cost has already been voted for the first section (excepting small sums yet obtainable), in debentures bearing six per cent interest, payable in 20 years, securities which are unexceptionable, and will sell at near par.

Of the remaining capital, it is proposed now to offer $325,000 to be subscribed in stock. If that or a larger amount is not so subscribed, bonds will be issued for the balance of about $300,000.

Local capital to the extent of *more than* two-thirds of the cost of the railway will be security to holders of the bonds of this Company.

The interest and dividend bearing capital will not exceed $9,000 per mile.

The Directors, although anxious, and having authority under their charter to make the village of Mount Forest the terminus of the first section, are unwillingly constrained to select an eligible point, nearer, on the Garafraxa Road, in the Township of Arthur.

This decision may be altered, and Mount Forest made the terminus of the first section, by the Municipalities concerned voting the amounts of bonuses, as required by the Company.

In either case the capital derivable from bonuses will be about the same per mile.

Arrangements to complete the remaining sections of the Railway through the counties of Bruce and Grey, will be prosecuted with unremitting vigour, as soon as the first section is fairly under construction.

The Garafraxa Road, the great highway from Owen Sound, through the counties of Grey and Wellington to Guelph; and the other great highway, the Elora and Saugeen Road, from Southampton, through the counties of Bruce and Wellington, ultimately uniting with the Garafraxa Road, *passes within from 5 to 8 miles of the proposed terminus of the first section* of the Railway, to connect with which a gravel road will be built; while the Toronto and Sydenham gravelled road, from Chatsworth, intersects the Durham and Collingwood road, reaches to within two or fifteen miles of the Orangeville station, and when completed, together with the others, assures to the Toronto Grey and Bruce Railway the traffic of the whole heart of the North-western peninsula.

The bulk of the products of the great counties of Bruce and West Grey is shipped by water, on account of distance from the Grand Trunk Railway, only a part being moved in the autumn, the principal portion being marketed and stored, during winter, at the ports on the shore of Lake Huron and the Georgian Bay. At four of these points there are now stored a quarter of a million bushels, while the aggregate at all the points amounts to about 500,000 bushels.

The loss of interest on the capital thus invested, together with the proportionately lower prices paid for produce during winter in these remote districts, are serious drawbacks to their prosperity.

The distance deprives producers of the facilities afforded by the *Grand Trunk Railway, and the Montreal Steamship line* for moving, in winter, produce to markets, as well of the very great advantage of Railway communication to the flourishing city of Toronto, (the best distributing point either in winter or summer,) and now the capital of Ontario.

The total area between the Grand Trunk and the Northern Railway of Canada is 6,800 square miles, of the richest and most fertile land in Canada. The Toronto, Grey and Bruce Railway will intersect this district, about mid-way between the two other Railways, and when completed will confer immense benefits on the people in that district, while it is quite evident that the general business *which will be brought to the city of Toronto* (exclusive of through traffic) will equal that brought to it by all the other Railways.

The Toronto, Grey and Bruce Railway will obtain a much larger passenger, grain, cattle, and first-class goods traffic than the Northern Railway; while the sawn pine, which *must be imported* to supply the absence of that building material, and the export of square hardwood timber, such as oak, elm, cherry, &c., staves, bark, fencing, and cordwood (fuel), will afford a very large and remunerative business to the Toronto, Grey and Bruce Railway.

The Freestone and other stone used for building materials in Toronto are now imported from Cleveland or Kingston. On the route of the T. G. & B. R. there are, near Orangeville, extensive quarries of the very best soft and hard brown and white freestone, which will be in great request for export and general city building purposes. The advantages to the Railway and this city, of these quarries are not yet generally appreciated.

The subjoined tables of the traffic of the Northern R.

y will serve to illustrate the local business of a railway miles long, through an average country in Canada.

IN 1863.

e Local Traffic of the Northern Railway of Canada amounted to		120,000 tons.
rough		25,000 "
ssengers		100,618 "
al Receipts	$362,597	
rough	48,432	$410,939
nning expenses		68 per cent.
cess of earnings over running expenses on local traffic	$115,982	
on Through Traffic	15,498	
al earnings equal to 8¾ per cent. on a cost of $15,000 per mile. Or 12⅓ on $10,000 per mile.		

1864.

al Traffic		180,000 tons.
rough Traffic		8,344 "
ssengers		104,346 "
al Receipts	$452,382	
rough "	14,884	$467,263
nning expenses		52 per cent.
cess of earnings over running expenses on Local Traffic	217,143	
on Through Traffic	7,144	
al earnings equal to 15 2-5 per cent. on a cost of $15,000 a mile. Or 28 1-10 per cent. on $10,000 per mile.		

1868.

al and Through Traffic		194,583 tons.
ssengers		138,965 "
al Receipts	$537,380	
rough "	12,690	Total $550,070
nning expenses		61 per cent.
cess of earnings over running expenses on Local Traffic	$209,578	
on Through Traffic	4,949	
equal to 14¼ per cent. on $15,000 a mile (local earnings). Or 22⅓ per cent. on $10,000 per mile.		

1861—Running expenses per cent. 68; local tonnage, 120,-; through tonnage, 25,000; total tons, 145,000; passen-s, 105,618; local receipts, gross, $362,507; through re-pts, gross, $48,432; total receipts, gross, $410,939: local eipts, nett, $115,982; through receipts, nett, $15,498; idend on $15,000 a mile, local, 8 1-3; dividend ou $15,-) a mile, through, 1 1-10.

1864—Running expenses per cent. 52; local tonnage,),700; through tonnage, 8,346; total tons, 189,046; pas-ngers, 104,346; local receipts, gross, $452,382; through eipts, gross, $14,884; total receipts, gross, $467,266; al receipts, nett, $217,143; through receipts, nett, $7,-4; dividend on $15,000 a mile, local, 15 2-5; dividend on 5,000 a mile, through ½.

1868—Running expenses per cent. 61; total tons, 194,-3; passengers 138,965; local receipts, gross, $537,380; rough receipts, gross, $12,690; total receipts, gross, 0,070; local receipts, nett, $209,578; through receipts, tt, $4,949; dividend on $15,000 a mile, local, 14⅛; divi-nd on $15,000 a mile, through ½.

Total tons, 528,629; passengers, 349,929; local receipts, ss, $1,352,269; through receipts, gross, $76,006; total eipts, gross, $1,428,275; local receipts, nett, $542,703; rough receeipts, nett, $27,591; dividend on $15,000 a mile, al, 12 5-6; dividend on $15,000 a mile, through, ⅔.

AVERAGE—Total tons, 176,209; passengers, 116,643; local eipts, gross, $450,756; through receipts, gross, $25,335; tal receipts, gross, $476,091; local receipts, nett, 180,901; rough receipts, nett $9,197; dividend on $15,000 a mile, al, 12 5-6, dividend on $15,000 a mile, through ⅔.

From the above data it will be seen that the Northern ilway carried an average for those three years of 176,209 ns of freight; and 116,643 passengers; the average gross eipts being $450,756, while the nett receipts from local ffic were $180,901, equal to an annual dividend of 12 5-6 r cent. on a cost of $15,000 per mile.

It is remarkable and of consequence to intending sub-ribers for stock of the T. G & B. R., that the net re-ipts for through traffic for the same years only averaged ,197 per annum, equal to a dividend of ⅔ of one per cent a cost of $15,000 per mile. This fact clearly proves the ne of local as against through traffic.

The grain, cattle, pork, goods and passenger traffic tri-tary to the first section of the Toronto, Grey and Bruce ilway will equal, if not exceed, for the same length of e, the local traffic of any other railway in Canada.

The following estimate of traffic from the first section the Toronto, Grey and Bruce Railway, is based upon lculations on the returns made by the Municipalities, d an intimate acquaintance with their trade and re-urces:

Passengers, 140,000	$145,000
Cereals, 2,000,000 bushels	100,000
Flour, 50,000 barrels	15,000
General goods, 50,000 tons	150,000
Square timber, 1,000,000 cubic feet	30,000
Staves, lumber, bark, posts, &e	10,000
Cordwood, 20,000 cords	25,000
Mails and express	20,000
Total	$490,000

Allowing 60 per cent for running expenses, the net earn-gs would amount to $196,000—equal to a dividend of 18 r cent on a cost of $15,000 per mile.

Allowing reasonable margin for increased cost or less ffic (the moderate estimate of which will be undisputed,) ere remain the *strongest reasons* for anticipating a divi-nd of 10 per cent per annum.

By the Act of Incorporation, the Company is specially bound to carry cordwood, and to afford every necessary facility for so doing at the specified rate of 3 cents per cord per mile for dry wood, for all distances under 50 miles, and 2½ cents per cord per mile for all distances over 50 miles—a rate which has been found satisfactory, by test of actual experience, on the Government Railways of New Brunswick.

This condition will enhance the cost of fuel to the Company, but the increased traffic and prosperity consequent upon this trade, it is fully believed, will more than compensate for the extra cost of fuel.

The gentlemen who have promoted and borne the preliminary expenses of this enterprise, and who desire to see it carried out in good faith on sound commercial principles, *are resolved*, in so far as their influence is equal to the task, to have this railway controlled by the most respectable capitalists of this city and the country on the route of the railway, who may take stock in it; to convert their own securities, and pay cash to contractors, and not to surrender control of the railway to contractors or bondholders; to let the contracts in a manner to ensure the healthiest competition. In other words, *to have value for the money from the turning of the first sod to the laying of the last rail.*

The country on the route of the first section, with the exception of a short distance in Caledon, is one of the easiest for railway construction in Canada, especially the 22 or 25 miles from Orangeville to the Garafraxa Road.

In the Township of Caledon—the country is hilly and rolling. This portion of the route was carefully and completely surveyed and cross-sectioned under the auspices and by the direction of Mr. J. E. Boyd, M.I.C.E., and Engineer for the Government of New Brunswick, before the Company obtained their charter, and, as anticipated, no real difficulties were encountered; the highest grade, with moderate cuttings, being 65 feet to the mile. Mr. Charles Douglas Fox examined, for the Company, the figures and the profile, and, together with Mr. Boyd, gave their written opinion that the cost of this portion, per mile for earth-works, would not exceed $15,000. There are no rock cuttings.

Ballast, ties, timber for bridges, and lumber for fences, are convenient and available at the lowest cost in Canada, along the whole route of the first section.

Every other consideration, in the first instance, will be subordinated to the construction of a first-class permanent way; the best of timber bridges; deep and good ballasting. Rails to weigh 40 lbs. to the yard, and to be selected of the best quality.

Arrangements are in progress which will secure to the Company free right of way through the city, and egress, if desired, for a few miles out of the city, on the line of the Grand Trunk, by means of a third rail; and the disposition of the proprietors, and other circumstances along the line are so favorable, that the whole right of way will be obtained for an amount not exceeding $22,000.

Station grounds and dockage will be had in this city, either free, or for a nominal rental.

It is the desire of the Provisional Directors to have their Chief Engineer appointed, with the concurrence, and subject to the approval of the Company's Consulting Engineers, Sir Charles Fox & Sons, who will be held responsible for the excellence of the works, economy of construction, and the success here of the system of narrow guage railways, of which they have had large experience elsewhere, and with the initiation of which in this country they are honorably identified.

On these premises the Provisional Directors appeal for stock subscriptions to the citizens of Toronto, to the municipalities, and to the business men and proprietors of land along the route of the railway, and to capitalists elsewhere, believing that the most cautious and prudent investors will find the stock of the Toronto, Grey and Bruce Railway worthy of their attention.

The stock books will be opened at the Company's offices, Front street, on the 21st April, at 10 o'clock, a.m. Forms of application for shares can be had on application to the secretary, and from the reeves and clerks of the several municipalities on the route of the railway, and from Messrs. Campbell & Cassels, and from Messrs. Blakie & Alexander, Toronto, and from McDougall & Davidson, Montreal.

In conjunction with the Toronto and Nipissing Railway Company, it is agreed that a member of the firm of Sir Charles Fox & Sons, Consulting Engineers, will be invited here immediately by telegraph, when active operations will be commenced.

Royal Fire & Life Insurance Company
OF LIVERPOOL AND LONDON.

CAPITAL, TWO MILLION STERLING,
WITH LARGE RESERVE FUNDS.

ANNUAL INCOME, - - - - - - - - - £800,000 Stg.

FIRE BRANCH.

Very moderate rates of Premium. Prompt and liberal settlement of losses. Loss and damage by explosion of gas made good. No charge for policies or transfers.

LIFE BRANCH.

The following are amongst the important advantages offered by this Company:
Perfect security to assurers. Moderate rates of premium. Large participation of profits—the bonuses being amongst the largest hitherto declared by any office, and divided every five years. EXEMPTION OF ASSURED FROM LIABILITY OF PARTNERSHIP. Claims settled promptly on proof of death. Liberal allowance for surrendered policies. Forfeiture of policy cannot take place from unintentional misstatement. No charge for policies or assignments. Medical fees paid by the Company. Tables and forms of application, with all other information, can be obtained on application to

EDINBURGH LIFE ASSURANCE COMPANY.
FOUNDED 1823.

AMOUNT OF ACCUMULATED AND INVESTED FUNDS—OVER ONE MILLION STERLING.
HEAD OFFICE—EDINBURGH.

PRESIDENT—The Rt. Hon. the Earl of Haddington. MANAGER—D. Maclagan, Esq. SECRETARY—Alex. H. Whytt, Esq.
CANADIAN OFFICE ESTABLISHED 1857. WELLINGTON STREET, TORONTO.
CANADIAN BOARD—Hon. John Hillyard Cameron, M.P., Chairman. J. W. Gamble, Esq., L. Moffatt, Esq, Hon. J. B. Robinson, C. J. Campbell, Esq. David Higgins, Secretary.

THE Edinburgh Life Assurance Company offer to the public the advantages of a Canadian as well as a British Company. They have invested a large amount of money on securities in this country, and the Toronto Local Board have full power, by an Imperial Statute, to take risks, make investments, and settle claims in Canada, without reference to the Head Office, Edinburgh. Some of the old Policies in the Company, which became claims during the past year, were settled by payment of amounts double of those originally insured, in consequence of the large bonuses that accrued on the Policies.

Every information that intending assurers may require can be obtained at the Company's Office in Toronto, or at any of the Agencies which have been established in the principal towns in Canada.

J. HILLYARD CAMERON, CHAIRMAN. (36-1y) DAVID HIGGINS, SECRETARY.

IN THE MATTER OF THE COMPANIES' ACTS, 1862 AND 1867,

AND OF

The International Life Assurance Society.

THE creditors of the above named Society are required, on or before the 31st day of May, 1869, to send their names and addresses, and the particulars of their debts or claims, and the names and addresses of their Solicitors, if any, to Frederick Maynard and Edmund Sheppard Symes, the Official Liquidators of the said Society, at the office of the said Official Liquidators, situate at No. 265 Gresham House, Old Broad Street, in the City of London.

Dated the 11th day of March, 1869.

JOHN TUCKER,
28 St. Swithin's Lane, London,
Solicitor for the said Official Liquidators.

April 12, 1869. 35-4t.

NOTICE

IS hereby given that the Liquidators of the Western Insurance Company, Limited, will apply to the Minister of Finance for his warrant authorizing the withdrawal of the deposit made by said Company with the Minister of Finance, as required by statute of the late Province of Canada, chapter 83 of 22nd Victoria, the said Company having ceased to do business in Canada.

CARTER & HATTON,
35 Attorneys for Liquidators.

THE TORONTO AND NIPISSING RAILWAY COMPANY.

Total Length to Lake Nipissing, about 200 Miles.

FIRST SECTION FROM TORONTO TO COBOCONK, 85 MILES;

With a Branch of 18 miles from the Main Line to the Town of Lindsay.

Total Capital, $3,000,000.

Capital for the First Section (Main Line) **$1,275,000**

BONUSES already Voted by Municipalities for the First Section of the Main Line, $339,000.

AS FOLLOWS:—

City of Toronto, $150,000; Scarboro', $10,000; Markham, $30,000; Uxbridge, $50,000; Scott, $10,000; Brock, $50,000; Eldon, $44,000; Bexley, $15,000; Luxton, Digby and Longford, $25,000; Somerville, $15,000.

BONUSES yet to be obtained, including those for the Lindsay Branch, $155,000.

First issue of stock in $100 shares, $400,000.

Upon which will be Issued Bonds for $476,000.

Upon $126,000 of which a Guarantee from the Government of Ontario will be applied for, as equitable assistance for the construction of the Railway through and into Crown Lands on the route of the First Section.

PRESIDENT—John Crawford, Esq., M.P.

VICE-PRESIDENT—J. E. Smith, Esq., Collector of Customs.

DIRECTORS:

CONSULTING ENGINEERS—Sir Charles Fox & Sons.

BANKERS—Bank of Toronto.

BROKERS—Blaikie & Alexander, Pellatt & Osler.

SECRETARY—Charles Robertson, Esq.

OFFICES—46 FRONT STREET, TORONTO.

PROSPECTUS.

The Provisional Directors of the Toronto and Nipissing Railway Company, finding that the further progress in the building of Broad Gauge Railways in Canada, with English capital, was no longer financially practicable or expedient for lines of Railway projected for local traffic, and having become cognizant of the successful working for a number of years of Railways built on the three feet six gauge, in the Kingdoms of Norway and Sweden, in the colonies of Queensland and New Zealand, and also in India, and that these Railways were capable of accommodating a traffic of about a million or a million and a half of tons of goods per annum, and of carrying passengers at a speed of twenty-five to thirty miles an hour, and seeing that the average speed of passenger trains, including stoppages, in Canada does not exceed twenty miles an hour, and that the total traffic of the Northern Railway (which offers a fair illustration of the traffic to be obtained by the Toronto and Nipissing Railway) did not exceed 195,000 tons and 140,000 passengers, have therefore resolved to construct the Toronto and Nipissing Railway on the three feet six gauge, in the most economical and efficient manner consistent with a total cost of $15,000 per mile.

The Directors have also noted Capt. Tyler's report on the Festiniog Railway, two feet gauge, in Merionethshire, Wales, the freight and passenger traffic of which approximates closely to that of the Northern Railway, and, with the exception of the lumber traffic, largely exceeds that carried on the Lindsay and Port Hope, or on the London and Port Stanley Railway.

With a view to a just apportionment of the risks incidental to capital invested in Railway enterprise in Canada, it was resolved to ask the municipalities most to be benefitted by the construction of the Railway, for *one-third of the total cost of the Railway, viz., $5,000 per mile, by way of bonus* or gift. This proportion of the cost has *already been voted* for the main line, excepting less than $30,000, yet obtainable, in debentures bearing six per cent., payable in 20 years—securities which are unexceptionable, and will sell here at or near par.

Of the remaining two-thirds of the capital, it is proposed now to offer here $400,000 to be subscribed in stock. If that or a larger amount is not subscribed, bonds will be issued for the balance of about $6,000 per mile. Thus local capital to the extent of about two-thirds of the cost of the Railway, will be security to the holders of the bonds of this Company.

The interest-bearing capital will thus be $10,000 per mile.

The Directors do not propose to extend the line beyond Coboconk, towards Lake Nipissing, unless subsidized by the Government of this Province with land or money sufficient to guarantee the Company from the loss of any private capital to be invested in the sections of the line beyond Coboconk.

Nevertheless, the Company feel assured that the first section being successfully completed, the remaining sections will immediately receive aid from the Government to the extent necessary to secure the construction of the line to the ultimate terminus at Lake Nipissing—thus ensuring to the proprietors of the first section the practically unlimited timber traffic, as well as the general business of an immense new territory of twenty thousand square miles.

The terminus of the first section being located on the Gull River, with access to all its tributaries, and to the Burnt River, insures for this Railway a timber and lumber traffic certain to exceed in duration of supply and quantity the timber and lumber traffic of the Northern Railway, and which will undoubtedly equal or exceed that of the Lindsay and Port Hope Railway, which amounted to nearly one hundred millions of feet in the year 1868.

The sawn lumber traffic of the Northern Railway of Canada in 1868, amounted only to about fifty-five (55) million feet, and the square timber traffic to one million six hundred thousand cubic feet.

IN 1861.

The local traffic of the Northern Railway of Canada amounted to..	120,000 tons	
Through	25,000 "	
Passengers	100,618 "	
Local Receipts	$362,507	
Through	48,432	$410,939
Running Expenses		68 per cent.
Excess of earnings over running expenses on local traffic	115,982	
Do. on through traffic	15,498	
Local earnings equal to 8½ per cent on a cost of $15,000 per mile; or 12½ on $10,000 per mile.		

1864.

Local Traffic	180,700 tons	
Through Traffic	8,344 "	
Passengers	104,349	
Local Receipts	$452,332	
Through "	14,884	$467,263
Running Expenses		52 per cent.
Excess of earnings over running expenses on local traffic	217,143	
Do. on through traffic	7,144	
Local earnings equal to 16 2-5 per cent on a cost of $15,000 a mile; or 23 1-10 per cent on $10,000 per mile.		

1865.

Local and through traffic	194,553 tons	
Passengers	138,965 "	
Local Receipts	$537,380	
Through "	12,690	$550,070
Running expenses		61 per cent.
Excess of earnings over running expenses on local traffic	209,578	
Do. on through traffic	4,949	
Or equal to 14⅞ per cent on $15,000 a mile (local earnings); or 22½ per cent on $10,000 per mile.		

1861—Running expenses per cent, 68; local tonnage, 120,000 through tonnage, 25,000; total tons, 145,000; passengers, 106,618; local receipts, gross, $362,507; through receipts, gross, $48,432; total receipts, gross, $410,939; local receipts, nett, $115,982; through receipts, nett, $15,498; dividend on $15,000 a mile, local, 8 1-3; dividend on $15,000 a mile, through, 1 1-10.

1864—Running expenses per cent, 52; local tonnage, 180,700; through tonnage, 8,...6; total tons, 189,046; passengers, 104,349; local receipts, gross, $452,332; through receipts, gross, $14,884; total receipts, gross, $467,2... local receipts, nett, $217,143; through receipts, nett, $7,144; dividend on $15,000 a mile, local, 15 2-5; dividend on $15,000 a mile, through, 1-2.

1865—Running expenses per cent, 61; total tons, 1... 588; passengers, 138,965; local receipts, gross, $537,... through receipts, gross, $12,690; total receipts, gr... $550,070; local receipts, nett, $209,578; through recei... nett, $4,949; dividend on $15,000 a mile, local, 14 7-8; dividend on $15,000 a mile, through, 1-3.

Total tons, 528,629; passengers, 349,929; local receipts gross, $1,352,269; through receipts, gross, $76,006; t... receipts, gross, $1,428,275; local receipts, nett, $542,7... through receipts, nett, $27,591; dividend on $15,... mile, local, 12 5-6; dividend on $15,000 a mile, through,...

AVERAGE. Total tons, 176,209; passengers, 116,... local receipts, gross, $150,756; through receipts, gr... $25,535; total receipts, gross $476,691; local receipts, nett, $130,901; through receipts, nett, $9,197; dividend on $15,000 a mile, local, 12 5-6; dividend on $15,000 a mile, through, 2-3.

From the above data it will be seen that the North... Railway carried an average for those three years of 1... 209 tons of freight, and 116,643 passengers; the ave... gross receipts being $150,756, while the nett receipts f... local traffic were $130,901, equal to an annual dividend 12 5-6 per cent on a cost of $15,000 per mile; or 19 1-4 ... $10,000 per mile.

It is remarkable and of consequence to intending s... scribers for stock of the T. & N. R., that the nett recei... for through traffic for the same years only averaged $9... per annum, equal to a dividend of ⅔ of one per cent. o... cost of $15,000 per mile. This fact clearly proves the v... of local as against through traffic.

The Grain Traffic tributary to the Toronto and Nipiss... Railway undoubtedly will not fall below 900,000 bush... and probably will largely exceed that quantity. The P... senger Traffic is anticipated to average 100,000 per ... num.

The country through which the first section of the ... ronto and Nipissing Railway will pass, is more popul... wealthy and extensive than that tributary to the North... Railway—being one of the oldest and finest settled dist... in the Province of Ontario. Various unsuccessful eff... have previously been made to accommodate this dist... with railways.

The most moderate estimate of the gross receipts f... the traffic in timber, lumber, cereals, passengers, etc. ... be carried over the T. & N. R. place the amount at an a... age of $400,000 to $500,000 per annum, for the first eigh... ten years, when the traffic must necessarily increase t... much larger amount.

The traffic to create this revenue will be derived from ... following items, and in about the proportions set forth ...

Pine, or sawn lumber, for the first eight years, 80,000,000 ft. at $2 per 1,000 ft.	$160,0...
Square timber, 1,250,000	37,5...
Cereals, 900,000 bushels, at 5c per bush.	45,0...
General goods, 15,000 tons, at an average of $3 40 per ton	51,0...
Mails and Express	15,0...
Cordwood, 25,000 cords at $1 50 per cord	37,5...
Passengers, 100,000	100,0...
	$446,0...

Allowing 60 per cent. for running expenses, the ... earnings amount to $178,400—equal to a dividend of 14 ... cent. on a cost of $15,000 per mile: and on the actual ... to the Company of $10,000 per mile, the dividend f... such nett earnings would be 21 per cent.

The Provisional Directors invest their own means ... their faith in the correctness of these estimates.

The terminus at Coboconk, on the Gull River, will ... net the Railway with a vast stretch of Inland Naviga... upon which steamers now trade, and which, with comp... atively inexpensive improvements already partly und... taken by the government, will give these boats acce... the Railway, and will afford almost inexhaustible supp... of pine and hard wood.

By the Act of Incorporation, the Company is spec... bound to carry cordwood, and to afford every necess... facility for so doing at the specified rate of 3 cents ... cord per mile for dry wood, for all distances under 50 m... and 2½ cts. per cord per mile for all distances over 50 m... —a rate which has been found satisfactory, by the test... actual experience on the Government Railways in N... Brunswick.

This condition will enhance the cost of fuel to the C... pany; but the increased traffic and prosperity consequ... upon this trade it is fully believed will more than com... sate for the extra cost of fuel.

The numerous association of gentlemen who have ... noted and borne the preliminary expenses of this en... prise, and who desire to see it carried out in good faith ... sound commercial principles, *are resolved*, in so far ... their influence is equal to the task, to have this rail... controlled by the most respectable capitalists of this ... and the country on the route of the railway, who may t... stock in it: to convert their own securities and pay ... to contractors, and not to surrender control of the railw... to contractors or bondholders; to let the contracts ...

manner calculated to ensure the healthiest competition; n other words, to have value for the money from the urning of the first sod to the laying of the last rail.

The country on the route of the first section of the rail- vay is generally level, although in two townships it is roken or rolling, yet the soil being loamy in these excep- ions, and there being almost no bridges; the superficial examination had and the flexibility of the gauge ensures a minimum of cuttings and fillings—while timber for bridges nd ties, and lumber for buildings and fences, can be had t the least cost possible in Canada.

Every other consideration in the first instance will be ubordinated to the construction of a first-class permanent ay, the best of timber bridges; deep and good ballasting ails to weigh 40 lbs. to the yard, and to be selected of he best quality.

Arrangements are in progress which will secure to the Company free right of way, through the city, and egress, f desired, for a few miles out of the city, on the line of he Grand Trunk, by means of a third rail; and the dispo- ition of the proprietors and other circumstance along the ine are so favorable that the whole right of way will be btained for an amount not exceeding $20,000.

Station grounds and dockage will be had in this city ither free or for a nominal rental.

It is the desire of the Provisional Directors to have their hief Engineer appointed with the concurrence, and sub- ect to the approval of the Company's Consulting Engi- eers, Sir Charles Fox & Sons, who will be held responsible or the excellence of the works, economy of construction, nd the success here of the system of narrow gauge railways f which they have large experience elsewhere, and with he initiation of which in this country they are honorably dentified.

On these premises the Provisional Directors appeal for tock subscriptions to the citizens of Toronto, to the municipalities and to the business men and proprietors f land along the route of the railway, and to capitalists lsewhere, believing that the most cautious and prudent nvestors will find the stock of the Toronto and Nipissing ailway worthy of their attention.

The stock books will be opened at the Company's offices ront Street, on the 12th April, at 10 o'clock a.m.; mean- hile forms of application for shares can be had on appli- ation from the secretary and from the reeves and clerks f the several municipalities on the route of the railway, nd from Messrs. Blaikie & Alexander, Toronto, and ellatt & Osler.

CASEY S. WOOD, Esq., Lindsay.
JOSEPH GOULD, Esq., Uxbridge.
McDOUGALD & DAVIDSON, Montreal.
ALEXANDER FRASER, Esq., Quebec.

Secretary-Treasurer—A. McK. COCHRANE, 388 St. Paul Street, Montreal.

THIS COMPANY, with machinery now in working order and in course of construction, will be able to manufacture this year FROM TEN TO TWELVE THOUSAND TONS OF GOOD FUEL. Actual working shows—

I. That the fuel can be produced for $1.45 a ton, and with the improved machinery, at a much less cost.
II. That, for steam purposes, one ton of it is superior to one cord of wood, in the proportion of 31 to 27.
III. That, for domestic purposes, it is equal to wood or coal, and leaves very little ashes—about five per cent.

At the annual meeting of the Company in Montreal, it was decided to offer one thousand shares of Stock in Toronto. Mr. Isaac C. Gilmor has been appointed agent of the Company in Toronto, and is authorized to receive subscriptions for the Stock.

Prospectus, Map of the Property, and further information may be obtained by addressing

ISAAC C. GILMOR, 58 Colborne Street, Toronto.

JAMES GOODWIN, PRESIDENT,
ZEPHANIAH PRESTON, VICE PRESIDENT.
LUCIAN S. WILCOX, MEDICAL EXAMINER.

Organized in 1846. Charter Perpetual.

The Largest Mutual Life Insurance Company. Numbering Over 75,000 Members.

BEING A PURELY MUTUAL COMPANY ITS ASSETS BELONG EXCLUSIVELY TO ITS MEMBERS,

ASSETS, $21,000,000.—Acquired by prudent and economical management of twenty-two years, without the aid of a single dollar of original capital.

SURPLUS ASSETS, $6,361,967—All profits divided among the members. Each policy holder is a member. There are no stockholders.

ITS DIVIDENDS—Have averaged over 50 per cent. annually. Total amount of dividends paid the members since its organization, $4,397,142.

ITS SUCCESS UNPARALLELED—It has arrived at the extraordinary condition where the income from annual interest alone is more than sufficient to pay all the losses. Total amount of losses paid by the Company, $6,868,528.

ITS RESPONSIBILITY—For every $100 of liabilities it has $154 of assets.

LAST YEAR'S PROSPEROUS BUSINESS.

Amount insured fiscal year, 1867 .....$45,647,191 00 | Income received fiscal year, 1867.....$7,530,886 19

During its last fiscal year this Company paid to its living members, and to the families of deceased members, nearly $2,000,000, and at the same time added more than four millions to its accumulated capital.

The whole record of this Company has been one of prudent management and prosperous advancement. Among the older and leading Life Insurance Companies its average ratio of expenses to income has, through its entire history, been the lowest of any.

ITS LIBERALITY—It accommodates the insured by giving credit for part premium, and grants insurance to meet all the contingencies and wants to which Life Insurance is applicable.

It issues policies on a single life from $100 to $25,000.

MEDICAL REFEREES—J. WIDMER ROLPH, M.D.; H. H. WRIGHT, M.D.

Insurance.

INSURANCE MATTERS IN NEW YORK.

(From our own Correspondent.)

NEW YORK, April 26th, 1869.

The deliberations of the National Board of Fire Underwriters, held in this city on Wednesday, Thursday and Friday, of the past week, were distinguished not only for ability in debate, and a harmonious and urbane spirit, but for final and decisive action on several subjects that had long agitated the profession, and in regard to which, no practical action had been deemed possible. If, as thus far done, a large majority of the respectable companies shall continue to sustain the Board, its resolves will gradually assume the character and weight of decrees, and companies will be unwilling to incur the odium of defection from, or opposition to, the deliberations of a body that can never have any motive for action which shall not, in its deliberate judgment, be for the best good of the profession at large.

The real practical work of the session was in the discussion and final adoption of a series of resolutions, submitted by Mr. E. W. Crowell, Chairman of the Committee on Local Boards, Rates, and Commissions, and Resident Director here, of the Imperial of London. The debate on the vexed question of brokerage, rebate and commissions showed, that a large majority of the Board were of the opinion that the business pays too high a rate, not only as compared with other kinds of business, but that the rate is entirely out of proportion to the profits of insurance capital. After a protracted and animated discussion, the basis of calculating commissions was changed from gross to net, by the adoption of the following resolution:—

"*Whereas* The present mode of calculating commissions (whereby a stated percentage is allowed upon premiums received, regardless of agency expenses) is a serious error, and one demanding immediate reform, be it

Resolved, That from and after May 1, 1869, all companies connected with the National Board of Fire Underwriters hereby pledge themselves that the rate of commissions which they allow to agents shall be calculated only upon the net premiums due after deducting taxes, licenses, advertising, and all other agency expenses, except in cases where only ten per cent. commission is paid."

Henceforth, agents will be paid on the amount of benefit conferred on the companies. There are some six thousand agents representing American companies. They are not always conscientiously considerate of their companies' interests. They get their gross earnings in, and don't care for the year's results. In too many instances excessive commissions is a temptation for over-insurance, to which agents are parties. They allow States and cities to pile discriminating taxation upon the companies, when their united opposition would doubtless do much towards preventing it. With the *net* idea before them, they will doubtless be more careful and energetic. The remaining resolutions adopted, with amendments, were as follows:

"*Whereas*, There appears to be a misunderstanding among many companies as to their duties as members of the National Board of Fire Underwriters, and, as it is essential to the welfare of the organization that there should be plain and explicit rules applying to all; therefore, be it

"*Resolved*, That wherever local Boards exist, it is the duty of all companies, members of the National Board, to instruct their agents to join the same; and where no Board exists, it is their duty, when called upon, to instruct their agents to co-operate with other agents in effecting such organization; and where existing local Boards decline to admit representatives of outside companies, that such companies organize Boards for themselves, and establish correspondence with the National Board.

"*Resolved*, That it is the first essential to membership in this Board that tariff rates should be maintained, and no company is justified under any circumstances in taking a risk, or in allowing one to be taken by an agent, at less than tariff figures.

"*Resolved*, That from and after this date, the Chicago compact shall be a rule of this Board, and all companies members thereof shall be governed by its provisions and penalties.

"*Resolved*, that it is inconsistent with the interests of this Board that any company be recognized as a member thereof that declines to cancel or collect full rates on every policy written under the tariff figures; or that allows an agent to remain out of a local Board where one exists in his locality; or or that allows him to retain companies not belonging to this Board for which he violates the tariff.

"*Resolved*, That it is incumbent upon the Chairman of the Committee on Local Boards, Rates and Commissions to report, either to the Executive Committee or the National Board, the names of such companies, members of this Board, that decline to comply with the above rules and regulations, with the circumstances connected therewith, and upon due conviction the Executive Committee or the National Board, as the case may be, shall expel such company, and notice with the cause for such action shall be sent to every company belonging to this Board."

It will be seen from the tenor of these resolutions that the machinery of local Boards, accepting and enforcing the rates established by the National Board, through its Rating Committees, is deemed of vital importance.

Much of the Convention's time (part of the second and all of the third day) was consumed in the consideration of some plan to increase its power and inefficiency. Its means of action have been, as experience since its organization in July, 1866, shows, too much diffused. It meets annually, and its large Executive Committee quarterly. But the action of the Executive Committee is not deemed final, and not sufficiently respected by companies that, while finding it a matter of character to belong to the Board, yet act in bad faith towards it, by winking at the irregularities of their agents. Besides, the difficulties and complaints constantly springing up in every section of the country between agents and local Boards, with respect to rates, have not been treated summarily enough.

The radical idea of the Convention for a remedy was embodied in a report by the Committee on Local Boards and Rates: An Executive Manager,

with a sufficient salary to command the exclusive services of a competent person; a number of salaried assistants; and an Advisory Board, to whom such Manager should report monthly. Several other plans were suggested, looking to the division of the country into districts, the affairs of each district to be supervised by a section of a large committee to reside in that district. But the longer the debate was continued the more evident it became that the Convention would not reach a conclusion without extending its session. An informal vote had shown that the report of the Committee on Local Boards, as modified by Mr. Howard of Hartford (amendment accepted by Committee) was in greatest favor, viz.—that the Executive Committee appoint an Executive Manager, as aforesaid, and an Advisory Board, from its own members, and the requisite number of paid assistants. A resolution, that all the plans be referred to the Executive Committee, with powers to devise and put in action a suitable plan without necessary delay, was finally adopted. It is understood that the work will be consummated at an early day. This Manager and Advisory Committee will supercede the Committee on Local Boards, Rates and Commissions—a committee, by the way, which has done an enormous amount of hard and important service in organizing boards and rating hundreds of localities.

The Dominion, not being a part of His Majesty Uncle Sam's Empire, will not feel so lively an interest in the question of discriminating taxation as the people on this side. Congress taxes the companies 1½ per cent on *gross* premiums, and 5 per cent on dividends, and the States pile on from 2 to 5 per cent more. The total averages about 6 per cent of the whole expenses of managing the business. Besides, in many States, companies are compelled, as in Canada, to purchase local bonds, or make other form of deposit. It is the very decided conviction of several eminent jurists that when this question of inter-State taxation is reached in the United States Superior Court, the State practice of discriminating legislation will be declared unconstitutional and void.

The Committee on Taxation reported to the National Board that they had resolved to aid a test case, Paul vs. Commonwealth of Virginia, put on the U. S. Supreme Court Calendar, Dec., 1868, to the amount of $15,000 towards costs of suit. Virginia will not issue a license to any fire insurance company, not incorporated by its laws, unless the company shall first purchase Virginia bonds to an amount varying from $35,000 to $50,000, according to their capital. Your correspondent has examined the brief of the points upon which the suit of Paul was taken up, and he feels confident that the Supreme Court will finally break down all these state barriers. If states may erect barriers to internal commerce with impunity, how is the great inland commerce of the country to be carried on, when the Pacific Railroad is opened to the Golden Gate?

The reports of the several Special Committees, submitted to the Convention on the opening day, embody a vast array of statistics, and show how wide the field, varied the interests, and numerous the dangers, over which fire insurance operates. The revelations made by the committee on the storage, sale, &c., of petroleum, ought to lead to some remedial measures which shall secure a material reduction in the number of destructive accidents and fires, almost daily reported from this source. There is a general want of adequate municipal regulations for storage, and handling, and in the subjection of kerosene to a due test of its specific gravity. It is almost impossible to get a pure article of kerosene. In 715 tests made by our Boards of Health and Fire Commissioners, the average vaporizing test was only 80, and the average burning test, which should be 110° Fahrenheit, was only 92! In the manufacture of kerosene, the conscientious refiner runs all the dangerous oil into the benzine tank; but as this dangerous article must be sold at a lower price than burning oil, most of these refiners collect as little benzine, and as much kerosene as possible. Specific gravity is not a reliable test of inflammability, but the fire test is. Its general application, under ordinance, to all oils before sold, would remedy the evil. The committee recommended a set of precautionary rules for loading vessels, &c., at petroleum yards and depots, and submitted a form of ordinance for general adoption by cities and towns. If its general acceptance can be enforced through the influence of the National Board, a great boon will have been conferred upon the Union, and the Dominion as well.

A large amount of important labor was accomplished by the Executive Committee during the year ending with the Board's session. Some 75 local Boards were organized, making 475 in all, nearly all of which are working harmoniously. The rooms of this committee now contain 1,824 different tariffs, of which 390 were made during the past year. Hundreds of extra and special hazards have also been surveyed and rated: 37,095 printed documents have been distributed, and 7,000 letters answered, so that it will be seen that the sub-machinery of the National Board is quite extensive.

Doubtless the readers of the MONETARY TIMES, are as much interested in the growing evil of incendiarism as the folks on this side; Canada, like the mother country, and every other nation has its share of said experience, and grevious loss from this crime, and the enquiry how it can be checked, if not entirely suppressed, is of paramount importance, everywhere. The convictions of late, have been more numerous than heretofore, but the frequency of the crime is not preceptibly diminished. It has been satisfactorily determined by investigation among American companies, that 32 per ct. of their losses is attributable to this crime. The loss is not a loss to the insurance companies merely, but to the community at large, it is so much property value wiped out of existence. Moreover as the companies recognize incendiarism as occasioning one third of their losses, the premiums are by that amount greater than they would be, if the evil could be suppressed. The Executive Committee have resolved to *follow up* every case with persistent energetic aid to the authorities, and intimidation will ultimately to a large extent, follow *habitual* conviction. The form of an act was submitted to the National Board, and laid over until its next session (when it is believed public sentiment will be ready for it) to be urged upon the several states for adoption, providing that in a loss under a policy, the insured shall not in any case recover more than ¾ of the amount of the loss as proved. Such a law, with more stringent regulations and precautions, in regard to the chief cause of incendiarism, *over insurance*, would no doubt do much towards putting an end to this great evil, and disgrace to modern civilization.

M. A. C.

FIRE RECORD. — Bethany, Ont., April 17. — The store of W. M. Graham, Postmaster, was totally destroyed, with all its contents. The building was insured, but a quantity of newly arrived goods will add to the loss of Mr. Graham.

Stanley Township, Ont., April 17.—The barn and shed and contents of Wm. Curry, 6th con., were burned. The origin of the fire was the dropping of a live coal from the proprietor's own pipe.

Nissouri West Township, Ont., April 17.—The stable of John Switzer caught fire, it is supposed, from a spark from the chimney of the house, and, with contents, was burned to the ground. No insurance.

Ottawa, April 23.—A fire took place this morning on Rideau street, destroying two frame buildings and out-buildings — one occupied by Mr. Amos Rowe, auctioneer, and owned by Mr. Matthew Stephenson; the other owned by Whelan, grocer, and owned by Robinson & Beatty, Montreal. Insurance — Rowe, $1,000 each in the Home, Ætna, and Imperial; M. Stevenson, $1 in the Hartford; Whelan, $1,000 in the We of Canada, and $3,000 in the British Amer Robinson & Beatty in the Montreal. The i rances will more than cover the losses. stocks were all removed in a damaged condi

Murray Township, Ont., April 14.—The and sheds of John McColl, of the 8th con., fire, and burned to the ground with all their tents A span of horses, 3 hogs, 6 tons of 100 bushels of wheat, 80 bushels of oat bushels of peas, a lumber waggon, a buggy, a fanning mill were consumed. There w light insurance on the barn. The loss is mated at about $1,000. The fire is suppos be the work of an incendiary.

Whitby Township, April 16.—The barn stable of Henry Graham, lot 6, on the 7th with 5 fat hogs, 120 bushels wheat, 40 bu oats, a quantity of peas and barley, 7 tons of 2 bushels clover seed, 100 bushels turnips, quite an assortment of farming implements. loss must amount to something in the neighbor of $1,000, about $200 of which is covered b surance. Cause, smoking.

Blenheim, Ont., April 18.—Mr. Morris's office, store and contents were burned to ground. Nothing saved. It is thought the originated from the match-box. Quite a nu of letters and stamps were destroyed. The loss will amount to $6,000. Insured for $2 in the Niagara District Mutual.

Fullarton Township, Ont., April 19.—The of Jabez Parsons, on lot 1, concession 11, took and before any attempt could be made to e guish it, the building with its contents were to consumed. There were 6 horses 5 cows, a nu of sheep, a quantity of grain, &c., in the ba the time, but the only thing saved was one of horses, which was so severely burnt and ot wise injured that it was deemed advisable, act of merey to the poor brute to shoot it day. The loss is estimated at between $800 $1,000. No insurance. The origin of the fi not known, but the supposition is lightning.

Grand Narrows, C. B., April 4.—The Cape Br *News* says that the forge of Allan McNeil, G Narrows, with all its contents, including s new work, was destroyed by fire.

East Flamboro' Township, Ont., April 17. fire broke out in the kitchen of the house occu by John Brown, on the farm of Alexander Br near Aldershott, East Flamboro', which quickly consumed. The building, and a deal of the furniture, together with money, s eal instruments and photograph apparatus, destroyed. No insurance on the furniture.

London Township, Ont., April 18.—Duri severe thunder-storm, a barn belonging to Hobbs, on lot No. 3, 14th concession, Lon was struck by lightning, and burnt to the gro It contained a large quantity of straw and g implements, and two complete tool chests, be doors and sashes intended for his new house of which were consumed. Loss about $5, No insurance.

Bayfield, County Huron, Ont., April 16. storehouse owned by Mr. Rankin, was bu down. There was in the building $1,200 w of peas belonging to the Royal Canadian Bank which the insurance had run out, and 1 bushels of wheat belonging to Mr. Walke Windsor. The building was insured for $ As no fire had been used in the building, feared it was the act of an incendiary.

St. John, N. B., April 10.—A fire broke ou Messrs. Knox & Thompson's workshop, in re their warerooms on Germain Street. The eng were quickly on the ground, and the flames dued, but not before the principal portion of tools, patterns, and other valuable property us found in a cabinet maker's shop, were destro The place was insured. It is stated that t

d been no fire in the room from half-past five lock, and the impression is that the shop must ve been set on fire.

Seaforth, Ont., April.—Scoble's mill, in Stanley wnship, was burned to the ground ; the loss is ted at $1,000. No insurance.

Mitchell, Ont., April 13.—The *Advocate* gives e additional particulars respecting the recent ensive fire at this place :—"As yet it is a mys- y how the fire originated, but it started in the lding occupied by McQuade. The two build- s, used as stores, at the east end, were owned George Awty, insured for 1,000 ; George Ritz's k of furniture was insured for $400 ; the gro- y and liquors of George Barrett were insured $800. There were three shops in the next lding, which were owned by R. B. Stephens James Porter, and insured jointly in the sum 1,200 ; one was occupied by McQuade, whose k was insured for $400 ; the next was unoccu- l, C. Lynde having moved out of it a few days viously. The next was occupied as a dry goods grocery store by James Porter, the village k, on whose goods there was an insurance of 0. This gentlemen lost very heavily, some- g like $2,000 over and above his insurance. s. Ford, of Fullarton, owned the next building, ured for $700. It was occupied by O. Sinclair, hardware store, whose stock was insured for 00. The next was a brick building, owned by nezer Miller, of Hibbert, damaged about $300. insurance. Peterson & Hueston were the oc- nts as general merchants ; stock saved, but in dly damaged state. Insured for $2,000. In y's building were four families, all of whom d their furniture, but in a damaged condition. ddition to those losses, there were several buildings and a large quantity of fire-wood royed."

—The Ætna Live Stock Insurance Company, Hartford, which stopped some time since, offers ompromise with Canadian claimants at 50 per . off the amount of such claims—a very good tration of the wisdom of exacting a deposit foreign insurance companies.

Financial.

TORONTO STOCK MARKET.

(Reported by Pellatt & Osler, Brokers.)

siness has been very inactive for the past ; Government and County Bonds continue the favorite investment.

nk Stocks.—Sales of Montreal were made at and 145½ during the week, but closed in de- l at 146, and no sellers under 147. Buyers d give 105 for British America, with little ng. Small Sales of Ontario were made at little offering under 100½. Toronto is offer- 121, with no buyers over 120. Some sales yal Canadian were made at 79, sellers gene- asking 80. Commerce sold at 102 and 102½, s still offering at that rate. Transactions in are reported at 38½ and 39, closing heavy at ormer rate. Sales of Merchants' were made 7¾, and there is little demand. Quebec has ced to 102½, with little in market. Sales olson's were made at 108½ and 109. For du Peuple 108 would be paid ; little doing. ues Cartier is wanted at 109 ; none offering r 110. No Union in market ; 105 and 105½ l be paid. Transfer books of Nationale and anics' closed. City nominal.

entures.—No Canada of any kind offering. nion Stock is still in demand at 107. To- nominal ; none offering. First-class County fered at very high rates.

dricx.—Small sales of City Gas were made 7½, which rate is still offered. There were ctions in British America Assurance at 55½ 6. Sales of Canada Permanent Building So- were made at 125½ and 126 ; there are buy- ers at the former and sellers at the latter rate. Small lots of Western Canada B. S. are offering at 121 ; transactions unimportant. Large sales of Freehold B. S. were made at 112½, which rate would still be paid. Seventy-nine would be paid for Canada Landed Credit ; none on the market. Several mortgages have been placed during the week to pay from 8 to 10 per cent. Money continues scarce, and high rates are paid on first-class paper.

BANKING AND CURRENCY.—The Commons Committee on Banking is composed of the following :—Sir John A. Macdonald, Messrs. Rose, J. S. Macdonald, Wood, Mackenzie, Gibbs, Blake, Sir G. E. Cartier, Galt, Holton, Chauveau, Dunkin, Tilley, Smith, D. A. Macdonald and Campbell.

A STATEMENT *of the engagements which the Dominion has to meet at an early date.—Approximate.*

Amount of Loan due to the Province of Ontario		$ 500,000
Amount payable to do. on 29th Sept., on account of subsidy		300,000
Amount for redemption of 7 per cent. debentures, due 1st. September		887,000
Amount of loans per Bank of Montreal, due on 30th September	$1,000,000	
Amount do. 31st December	1,500,000	
		2,500,000
Amount payable on account of Nova Scotia and New Brunswick, on account of works		700,000
Amount balances due to financial agents in London		973,333

Instalments on account—	
Intercolonial Loan payable in October	2,500,000
Bank balance on account of silver	500,000
Total	$6,200,000

Finance Department, Ottawa,
August 27th, 1868.

BANK OF UPPER CANADA.—In the House of Commons, on Friday, the 23d,

Mr. Mackenzie moved for copies of all correspondence between the Government and the Trustees appointed, under Cap. 17, 31st Vic., on the Corporation of the Bank of Upper Canada, and copies of all Orders in Council or other documents connected therewith. He explained that when the Bill of last session passed the House there was a general demand that there should be an enquiry into the winding up of the affairs of the institution. He was satisfied that the trust reposed in the Trustees had not been exercised with the accuracy and despatch that should have been used. He did not desire to enter upon a discussion of the matter. He merely gave his reasons for asking for the documents to such an extent as the Government see fit to bring down. It was a matter which required considerable discussion ; but he would cheerfully hold to the decision of the Government.

Mr. Rose thought that he (Mr. Mackenzie) was right in asking for these papers, as the Bank of Upper Canada was an institution of public interest.

Mr. Street was sure the trustees were exercising their rights by all possible means to convert the property to the interest of the shareholders, and all interested in the winding up of the estate.

Mr. Mackenzie did not question the honesty of the trustees ; but he thought there was not the proper expedition used.

—A general meeting of the creditors of W. R. Brown & Co., was held on the 27th. Their liabilities are stated at $115,640, of which $25,000 was secured by mortgage ; $7,500 are immediately available. The assignee stated that the estate shows about five cents in the dollar. The Royal Canadian Bank has fyled a bill for the forclosure of a mortgage held by the Bank, but the assignee has fyled an answer to that bill. Efforts are being made to get hold of Brown's property in the States. A bill has also been fyled to set aside the settlement made on Mrs. Chewett.

Railway News.

GREAT WESTERN RAILWAY.—Traffic for week ending April 9, 1869.

Passengers	$31,074 03
Freight	57,283 86
Mails and Sundries	2,173 54
Total Receipts for week	$90,531 43
Coresponding week, 1868	88,042 17
Increase	$2,489 20

NORTHERN RAILWAY.—Traffic receipts for week ending April 17th, 1869.

Passengers	$2,711 05
Freight and live stock	8,423 78
Mails and sundries	260 20
	$11,395 03
Corresponding Week of '68.	11,303 60
Increase	$91 43

FARES BY THE PACIFIC RAILWAY.—First-class passage by rail from New York to Chicago, a distance of 960 miles, costs 2½ cents a mile. At the same rate a first class passage from New York to San Francisco would cost about $82.50 in greenbacks. The present charges on the Pacific Railroad are at the rate of 5 cents per mile on the Union, and 10 cents per mile, gold, on the Central. At these figures, and reducing the charges to gold rates, calculating 75 cents on the dollar, we get the following approximate estimates of the cost of a first class through ticket :

	Miles.	*Fare.*
New York to Chicago	900	$18.75
Chicago to Omaha	496	17.53
Omaha to Salt Lake	1,070	40.13
Salt Lake to San Francisco	775	77.50
Total	3,299	$153.91

In the statement of distances, six miles should be added for ferriage from Oakland to San Francisco, making a total of 3,305 miles. We have assumed that the Union and Central Pacific will meet at the head of Salt Lake, 775 miles east of the Bay of San Francisco. For this distance, not quite one-fourth of the entire distance to New York, the charge on the Central Pacific is a little over that for the remaining three-fourths of the journey. The company has given a promise, which its interests will require it to keep, materially to reduce its rates of fare in July next ; when, we may presume, they will not exceed the rate charged on the Union Pacific, and between Chicago and Omaha, and which we have placed at five cents in currency. This would reduce the charge on the Central to $38.75 gold, and the cost of a through trip to $115.16.

COAL MINES.—We regret to learn that the fire in the Foord Pit, Albion Mines, is likely to prove a more serious affair than was one time anticipated. On Wednesday evening last, several explosions occurred, since which time we have not learned any further particulars.—*Eastern Chronicle*, 3rd *April*.

THURSDAY, APRIL 29, 1869.

MR. KING AND THE NEW BANKING SCHEME.

As it is well known that Mr. King, the manager of the Bank of Montreal, is, if not the prime mover, at least the active and energetic promoter of the proposed new system of banking with which we are threatened, it may be instructive to endeavour to discover the motives which prompted his new line of action. His Provincial note venture fully equalled his expectations, as he took care to have the manipulation of the legal tenders himself, and the Bank of Montreal, of course, profited enormously by it. The country was robbed, the other banks were threatened and the Bank of Montreal reaped all the benefit. Mr. King is too able a manager either to suggest or support any change which would bring disadvantage to his institution, so we may take it for granted that no banking scheme would number him among its supporters, if it were likely to deprive the Bank of Montreal of its vantage ground or of its immense profits. Last year that bank added no less than $250,000 to its rest. At the Annual Meeting Mr. King said "the Committee of the Legislature *might* introduce a different banking system and I think it of very great consequence that our rest be increased so that we may be able to meet any phase of the question". This statement was made so long ago as June last. Mr. King must have had, therefore, a pretty fair idea of what was coming, and it is now generally understood, that he has had a hand in framing or revising the proposed Government measure.

The Bank of Montreal is a wealthy institution. It has to work with

Capital paid up.....	$6,000,000
Circulation.....	288,000
Deposits.....	14,015,000
Total.....	$20,302,000

Its money is thus invested,—

Coin, Provincial and other bank notes.....	$3,775,200
Government securities.....	92,400
In hands of foreign bankers.....	5,494,600
Bills discounted, real estate and other debts in Canada.....	13,235,800
Total.....	$22,598,000

This shows a surplus of $2,295,000, or over 38 per cent. above its whole capital.

All the other banks have the following amount to work with :—

Capital paid up.....	$24,788,300
Circulation.....	9,617,500
Deposits.....	22,961,200
Total.....	$57,367,000

Their money is thus invested,—

Coin, Provincial and other bank notes.....	$7,936,200
Government securities.....	3,025,800
In hands of foreign banks, bills discounted, real estate, and other debts in Canada.....	47,417,900
Total.....	$59,226,900

The proportion which these investments bear to the capital, and other funds placed in their hands, to work with, may be thus stated :

	B'k of Montreal.	Other B'ks.
Coin and notes, ...	18½ p. c.	14 p. c.
Government securities...	½ "	5⅓ "
Investments with foreign banks.....	27 "	1⅓ "
Investments in Canada..	65⅓ "	82¾ "

In giving these figures, we would again remind our readers of what has already been shewn in these columns, that they are no criterion of the relative strength of the Bank of Montreal and the other banks, because the Bank of Montreal, as financial agent of the Government, is at any moment liable to be called on to redeem a very large proportion of the Provincial notes in the hands of the other banks, and in circulation.

We presuppose that the proposed scheme of banking is, substantially, that the whole of the banks shall deposit the amount of t circulation with the Government, and, in sideration thereof, that the banks shal allowed six per cent. interest on that am by the Government, and that the Gov ment shall redeem the debentures at pr held by the banks, and guarantee the w circulation of the country; the banks, present, redeeming their circulation and sits, in specie, on demand. Under this sch if adopted, the banks would have to over to the Bank of Montreal, as fina agent of the Government, an amount to their circulation, or say $9,617,500. W is this sum to be obtained? According t best authorities the banks would still ha hold one-fifth of their deposits availab actual specie, unless they followed the e ple of the Bank of Montreal, and called own notes or "Provincial notes," speci that they could only spare out of their sent cash about $3,300,000. Then they the Government debentures, $3,025,800, the balances with foreign banks, $847 These three items make a total of $7,172 But between this sum, and the amou circulation as above stated, ($9,617,500) t is a difference of $2,444,700, which w have to be raised in some way, and the way would be by reducing discounts. So at the first start off the already contr discounts would have to be reduced, at by about two millions and a-half of do This is putting the matter in its most derate light. A bank could not leave without a considerable sum in its vault general use; so that the margin, so hel each bank, would, in the aggregate, amou a great deal which would necessarily r discounts still further. Then, if they de with Government, the full amount of maximum circulation, the evil would b creased immensely. What does our com cial community think of a prospect so sant? The point is simple and clear, the figures given show, in a slight degr portion of the immediate effects. The b will have to pay nine and a-half millions, having only seven millions to pay it must needs make up the balance by con ing discounts to the extent of the differ What say our merchants? What say al new railway companies, and those abo launch out into new enterprizes? The York *Financial Chronicle*, speaking of experience of the New York merchants u the National Bank system, says: "A sp cause of embarrassment to business has arisen from the abnormal condition of currency system, resulting in frequent sp in the money market, and rendering it im sible for merchants to get needful accom dation from the banks; this difficulty ha been but little less felt in the country

than in the city, where for several weeks s been impossible to get the best paper unted at less than 10 to 12 per cent."

e probable effect of the proposed scheme the Bank of Montreal would be some- like the following:—As financial agent e Government it would receive from the banks $9,617,500, less the amount of rnment debentures, $3,025,800, which l equal $6,591,700. This is the sum would be placed in its hands, on account e Government, and its working capital l be thereby increased from $20,303,000 6,894,700.

s true the Government might, and pro- would withdraw a portion of this amount the bank's hands, but that very with- l would be for payment of public works, as the Intercolonial Railway, &c., which l give the bank a circulation equal to nount so withdrawn. In other words, nk's working fund would not be de- d at all by such withdrawal, for as the rnment balance would decrease, the cir- on would increase, and Mr. King would it with himself, as financial agent, the nt of such increased circulation, and e six per cent. interest upon it. A very proportion of this $6,591,700 would to remain in the bank's hands for some at any rate, for various purposes, such leeming the present legal tenders, as s for a specie reserve, to be held against would be a new guarantee fund neces- o meet demands by banks when their ation became reduced. Mr. King, we ould have the use of it for a consider- me for good or evil.

he other banks would have to curtail discounts, to meet the demand for a nment deposit of such a large sum as illions and a half of dollars, the effect be felt in the increased stringency money market. Mr. King being the er of this two millions and a half, be enabled to extend his operations other banks contracted theirs. Who is to profit by this? the very cream of scount accounts would leave the other and, of course, the Bank of Montreal get them for the taking.

suspect that the Bank of Montreal's of money, in the hands of foreign does not include gold loans in New If our suspicion is correct, why does King hold five and a half millions in nd, at one and a half per cent. when he t as much per day in New York for it? r the purpose of reducing the Govern- alance here, to the minimum, by paying debentures, with Intercolonial railway , as explained by the Finance Minister y, and then coercing the Government he funds are all exhausted and money is required for the actual construction of that railway. Suppose the Government should find that no more funds could be got from an additional issue of legal tenders, or, at least, not enough to meet current demands, what new concession might not Mr. King ask. Suppose he bought up the legal tenders, and made a run upon himself, as the financial agent of the Government. The Government would have to suspend specie payments, or give Mr. King any rate he liked to ask for a loan or for exchange.

Who is Mr. King, and what is the Bank of Montreal that they should be allowed to take the Dominion of Canada by the throat? Note the position of the Bank of Montreal and that of the other banks, as regards the actual facilities they at present afford the mercantile community. The Bank of Montreal gives in the shape of advances, in Canada, about 65⅓ of its available funds, and sends 27 per cent. out of the country. The other banks give 82¾ of their available funds, in advances, in Canada, and keep a reserve of only 1½ per cent. abroad. Would Mr. King give the needful additional accommodation which the other banks would be compelled to withdraw? He might take that course. Much would depend on the state of affairs in Canada; very much would depend on the state of the gold market in New York. With six and a half millions to invest, he might place it in foreign banks, and he might place it in discounts in Canada. The power would be in Mr. King's own hands, and his movements up to the present lead to the belief that he would not hesitate to exhibit it.

TORONTO, GREY AND BRUCE RAILWAY.

After the experience that the people of this country have had in the expenditure of money on railway projects, and with the knowledge of what is thought abroad of Canadian railway investments, it appears, at the first sight, little short of temerity on the part of the promoters of these two new undertakings—the Toronto, Grey and Bruce, and Toronto and Nipissing Railways—to ask from the citizens of Toronto and the inhabitants of the surrounding country no less a sum than two or three millions of dollars, for railway purposes. The subscribers to the stock of the Grand Trunk have not yet received a farthing of dividend on their investment. The original stockholders of the Northern Railway have not realized any return for their money; and so with other roads. Under these circumstances, it is surprising that such a remarkable degree of confidence should be shewn in the success of these narrow guage railways, as is apparent from the readiness with which leading business men subscribe for the stock. After a careful examination of the facts and statements presented, we give it as our firm belief, that the shares of the Toronto, Grey and Bruce Railway *will prove a paying investment;* and this belief is much strengthened by the circumstance that the control of the whole enterprise will be vested in a Board of the most respectable of our city merchants, the value of whose property and business depends largely on the success of the enterprise.

The Grand Trunk Railway and its subsidiary lines cost $74,683 per mile; the Great Western cost $70,340 per mile; the Northern cost $56,411 per mile; the London and Port Stanley cost $43,035 per mile; the Ottawa and Prescott cost $37,204 per mile; the Port Hope and Lindsay cost $35,285 per mile; the Welland $64,914 per mile, and the Brockville and Ottawa $30,601 per mile.

The directors of the Toronto, Grey and Bruce,—basing their statement on the report of their engineers, who examined the most difficult section on the route,—assure us that their road can be constructed on the three-feet-six-inch gauge for $15,000 per mile. This is one-half the sum expended on the cheapest railway in the above list, or about one-fifth the cost per mile of the Grand Trunk.

But will a road so cheaply constructed accommodate the local traffic? Will it serve the district and the stockholders as well, or nearly as well, as a road of greater cost and greater capacity? The directors meet this point by citing the case of a Welsh two-feet railway which accommodates a freight and passenger traffic closely approximating to that of the Northern. It is scarcely possible to doubt that three-foot-six railways have, in other countries, carried more freight and passengers than are likely to fall into the way of the Toronto, Grey and Bruce Railway for a quarter of a century to come.

The capacity of this road for carrying the requisite traffic being conceded, it is worth worth while to enquire, Will that traffic be forthcoming? The directors very properly appeal to the experience of the Northern Railway to prove that it will. The country through which this road will pass is not less fertile nor less productive of traffic, in the aggregate, than that traversed by the Northern. True, there will not be the heavy export movement of lumber and timber, but this, it is believed, will be more than compensated for by a greater supply of cereals, cattle, and general farm produce. The gross receipts are, therefore, estimated at $490,000, or nearly $48,000 less than the local receipts of the Northern last year. The working expenses are put at 60 per cent, leaving $196,-

000 as the net earnings available for the payment of interest, dividends, &c.

Let us now see how the account stands. There are already bonuses pledged to the amount of $425,000. The directors say that there are $77,000 yet to come by way of bonus. But let us suppose that they get half that amount, or in round numbers, $40,000, then we have

Capital required for first section		$1,050,000
Less bonuses obtained	$425,000	
" " expected	40,000	
		$465 000
Leaving to be raised		$585,000

or, say $600,000. One-half of this sum, $300,000, it is proposed to raise by subscription, and the rest by a mortgage bearing interest at, say, eight per cent. It is clear that the owners of the $300,000 of stock would be the proprietors of the entire undertaking, and after paying the interest on 300,000 per annum, or $24,000 (interest at 8 per cent), would be entitled to divide the remainder of the net earnings as a dividend among themselves. Taking the estimate of the directors, these net earnings would be $196,000, or after paying interest, $172,000, which would give something handsome in the way of a dividend. But supposing the cost of construction is underrated and the traffic overrated, there would still be an *ample margin* of profit. The work is in good hands, and is not likely to be saddled with fat contracts or burdened with expensive appointments. It will be supervised by the men who have put their money into it, and who have the deepest interest in its success. If the company's engineers can give us a road of the quality of construction and adequacy of equipment promised, and at the cost stated, the conclusion follows irresistibly that the stock of this road must prove one of the most profitable investments ever offered to the public of this country.

Pamphlet on Banking and Currency.—Mr. Jack, Cashier of the Peoples Bank, of Halifax, has published, in pamphlet form, his very able letters to the local press on the subject of Banking and Currency. After disposing of Senator Wilmott's wild proposition to substitute a government irredeemable currency, for the bank note circulation, he shows how the present banking system has assisted the development of the Provinces, and whatever loss has been occasioned by one or two bank failures has been amply compensated for in the general benefit resulting from the operations of the banks. In Nova Scotia there never has been a bank failure. With reference to the notes issued by the government of Nova Scotia he says, "it has often been difficult to obtain specie for them, as they are not at all redeemable in specie, and holders have sometimes found trouble in paying their debts with them." On the subject of loss, he asserts "that there have been fewer losses to the holders of bank notes in these colonies than in any other country which possesses a similar bank note circulation, or one based on government securities." His advice to the government is to let the present system alone. The pamphlet thoughout is full of information, and the argument is well sustained.

Intercolonial Railway. There were 82 tenders for section No. 5, varying from $361,574 or $13,907 per mile to $1,014,000 or $39,000 per mile. The successful tenderer is Edward Haycock, of Ottawa, at the first named amount. For section 6 there were 85, ranging from $241,500 or $11,500 per mile to $674,550 or $27,359. The contract was awarded to Jacques Jobin, of Levis. For section 7 there were 82 tenders, from $358,248 or $14,927 to $1,008,000 or $42,000 per mile. The contract was awarded to H. J. Sutton & & Co., at $413,995 or $17,248 per mile.

Mining.

MADOC GOLD DISTRICT.

(From Our Own Correspondent.)

Belleville, April 26th, 1869.

As spring is now advancing, some of your readers are no doubt desirous of hearing what is being done, or likely to be done, in this district. Very little is being done just now, and the prospect of what is going to be done is rather gloomy at present. Of all the quartz-mills which have been put up in the Madoc region, eight in number, not one is running at this time; and it is likely that some of them will not resume working at their present location.

The Richardson Company have stopped working, chiefly on account of the inefficient manner in which their shaft, &c., was originally laid out, rendering it impossible to get out the ore from the mine without incurring a much greater cost than the produce will repay. It is not likely that work will be resumed before the Sheriff's sale comes off, when the future ownership of the property will be determined.

The Severn mill is undergoing repairs, some of the gearing, &c., being badly damaged. The mill at the Barry Mine, in Elziver, is laid in; the announcement of the settlement of disputes among the shareholders being premature, as a law-suit is pending among them. The Merchant's Union Company have not yet determined what course to adopt as to the contemplated alterations in their mill, and are consequently doing nothing either in mining or milling. Mr. Berry's operations in Addington County are also suspended, although the construction of his apparatus is said to be excellent, and its operation quite satisfactory. He has evidently been misled as to the quantity of free or amalgamable gold contained in the rock of his mineral veins. The Anglo-Saxon mill is in the same state as when last reported on. The Eldorado mill has been removed to Marmora township, and will shortly be employed in crushing ore from some of the veins discovered in that township last fall. The mill at Bannockburn, belonging to the Toronto and Whitby Mining Company, after running a few days, and having some of the shoes of the muller broken, has been stopped. The damaged parts have been sent into Belleville for repair. The Company at Mallorytown, county of Leeds, have got their machinery completed, and I expect to hear of their shortly going into operation.

The reduction works of Messrs. Jones & Robbins, lot 23 in the 12th concession of Hungerford, have been idle all winter. It will be recollected that some of the "matt" from these wo (which were built for operating with the Steph flux) was sent by the proprietors to Swan Wales, for reduction; but the report received ing unfavorable, it is uncertain whether they resume operations or not. It turns out, as I ticipated, that their ore is too poor to be profit reduced by smelting with this or any other flu its native or unconcentrated state. This in seems to be the case with most of the ores of region. Free gold—that is, gold in its met state, uncombined with sulphuretted matter—c not exist in our rocks in sufficient quantity give returns by mill-amalgamation, except i few localities; though both fire-assay and hu analysis prove that the sulphides of some of veins contain gold, either pure or alloyed v silver and other metals, in paying quantities, occasionally are very rich. These precious met however, are so combined with the pyrites they cannot be taken up by quicksilver; and proportion of the sulphides to the bulk of rock as it comes from the mine is so small a preclude profitable smelting or roasting; so the only prospect of remunerative mining is submitting the ores to the process of dry crush and concentration, before desulphurization final reduction.

But to attain this end (remuneration) in highest degree, the miner must avail himself the improvements lately introduced into th several branches of his pursuit. Crushers revolving discs; concentrators on the prin iple the one described and figured in the *Amer Journal of Mining* of Feb. 20th, 1869. Roas furnaces in which the concentrated ore is desul urized by dropping through flame, and is recei into water. All these pieces of apparatus do th work cheaply, rapidly and effectually; and one, after being submitted to their action may treated for the collection of the gold, &c., ei by amalgamation, by smelting, or by chlorinat which last process is being introduced with g success into the mining operations of the Pa States.

Communications.

LONDON CORRESPONDENCE.

To the Editor of the Monetary Times.

London, April 8, 186

The agitation for a reform of life assurance c panies increases daily. All the leading newspa contain articles or letters from correspondents on subject. Both the critiques and the complaints very bitter. In one case the ludicrous is blen with imposture. This is the company to wh I referred a few weeks ago without mention names. Since then the Secretary has had to pear and give evidence in a court of Justice. revelations then made took many persons ab They are not, however, by any means startlin those whose knowledge of what goes on beh the scenes is in excess of that of the general pub This company is named the "National and Pro cial Union Assurance and Loan Society." It formed on the 23rd of last month, with a cap of £10,000, in shares of £1 each. The direc were men living in the most expensive and a trocratic quarter of the metropolis. On inve gation, it was found that although these direc did live at the addresses given, yet they li there as servants, and not as householders. deed, they were butlers in respectable and weal families. The company's articles of associat are couched in high-flown terms. It is th said that th operations of the company are to be confi ed to London, and that "it is inte ed to establish in many of the large towns of Empire local boards of directors, who will ad the resources of the Society by developing business of the institution, and giving confide to a large circle of policyholders. By this me

Society's influence will develop an amount of siness which a purely London board could ver accomplish." While we laugh at this at- pt of the butlers to mystify the public, let it t be forgotten that their masters have set them example. Even companies managed by those whom confidence is reposed, do not escape ad- se criticism, and probably deserve it. As an mple of this, let me cite the statement made a correspondent in the *Daily News* of this rning. Referring to the Prudential Assurance, says that the difficulty is to ascertain when a pany is justified in boasting, as that one does, the great success it has achieved, adding that, ording to the report for last year, "its total urance fund is £241,301 12s. 4d., and that its t year's premium income was £220,978 0s. 10d. is office has been in existence twenty years, and assurance fund is only £20,323 11s. 6d. in ex- ess of its last year's premium income; yet it sts of great success. Will its actuary say that life assurance company of twenty years' stand- should only have in hand a little more than year's premium?" Meantime, Mr. Cave's bill s read a second time last night in the House of mmons. There is a probability of its being ended in committee so as to become a useful l practical measure.

Before quitting this subject, let me furnish a figures which have recently been compiled h regard to the companies designed to extend advantages of life assurance to the poorer sses. The expenses of management in these npanies is enormous. In one case, where the ss receipts were £94,000, the outlay for man- ement was £36,000. In another it was dis- ered that £6,000 more were paid away in cer- n years than the receipts! This is the more be censured if it be true, as has been stated, t some of the oldest and best companies in ndon do not expend more than from four to per cent. in management. Unfortunately, wever, the poor are the easy victims of swin- rs, for they believe the promises made, and the risk without counting the cost. Yet the h or well-to-do cannot be absolved from a reck- sness as gross as that of the working man who ures his life in an insolvent company. Ac- ding to a statement published in the *Pall Mall zette* last night, the income of the gaming les of Germany amount to about half a million ding, while the total staked in the course of a r is seventeen millions! If to this could be led the sums risked in betting at horse-racing, "speculative" tendencies of the age would eive an illustration which would startle the lievers in progress.

The only recognized gambling here in England he Stock Exchange. At present there is little siness doing there. That section of the pub- which delights in speculation still keeps aloof m the scene of its losses. The demand for d at the Bank of England still continues, not- hstanding the advance last week of the rate of count from 3 to 4 per cent. It is believed that last of the American eagles have been with- wn from the cellars of the Bank. At one time was said that there was a larger stock of Ame- an gold coin in the Bullion Office of the Bank England than in the United States. Patriotic ericans will now rejoice at the thought that ir gold has returned home. It is to be hoped t it will remain there, and become before long currency of the country. However, the trade d currency of England being established on a nd basis, the flow of gold to America does not der the accumulation of as much bullion in cellars of the Bank as can be desired. Aus- lia and the Continent furnish supplies which n fill up the temporary gap. Against the ,000 worth taken away for exportation must set £150,000 which have arrived during the k.

An application has just been made to the in- ting public on behalf of three companies form- for the purposes of gold mining and quartz crushing. Two of these companies will conduct their operations in Australia; the third will develop the gold fields of New Zealand. The capital of the two Australian companies exceeds half a million sterling. It is noteworthy that the gold mining companies are seldom formed here with a view to conduct operations in Australia. There is capital enough there for the purpose. Besides, the Australians are too shrewd to allow a good thing to slip through their fingers. Out of the many companies projected here when gold was first discovered in Australia, but one survives. This is the "Port Philip and Colonial Gold Mining Company." It has proved a success. The shares are at nearly 100 per cent. premium. Yet the success of companies formed on the spot has been far greater. Hence there is a reluctance to embark capital in schemes which are not supported in the Colony. It was the same, I should think, in Nova Scotia. The mines which yield returns there are in the hands of persons well acquainted with the locality. A company which was formed here for the purpose of working a Nova Scotian gold mine became popular for a time; its shares were quoted at a large premium, but its shareholders are not to be envied. The company is now wound up, I suppose; at all events, its name has disappeared from the share list. The most successful gold mining companies, having their headquarters in London, are those which carry on operations in Brazil. Some of them have proved most remunerative. In the case of one not many years old, the shares on which 14s. are paid cannot be purchased under £5. The shareholdres receive yearly a sum equivalent to their capital in the shape of dividends. It is hardly necessary to add that this company is an exception.

PROVINCIAL INSURANCE COMPANY.

To the Editor of the Monetary Times.

TORONTO, April 28, 1869.

SIR,—Accept the thanks of a large insurer for the plain and masterly manner you have exposed the standing of the Provincial Insurance Company. I trust you will do the same with every suspicious corporation that the public depend upon for security. It cannot be too strongly urged on the attention of the assurer that security is the first disideratum in all insurance transactions, and that his object is not attained unless the event or contingency against which he wishes to guard is provided for from the moment he has paid his premium, under all possible circumstances. It is, therefore, manifest that the capital of an insurance company should be sufficiently large to meet all possible demands, with a proportionate reserve fund, and that its amount should be distinctly stated, or shown how invested, in order that its entire sufficiency to meet all claims may plainly appear. By the Provincial Company's own showing, they are far from being in the desired position as security to the insurance public.

Yours truly,

A CONSTANT READER AND A LARGE INSURER.

—Notices of application from the Erie and Niagara Extension Railway Company and Erie and Niagara Railway Company to the next Dominion Parliament for powers authorizing both or either of these railway companies to construct and operate for a railway or other purposes a bridge over or a tunnel under Niagara River, or near Fort Erie, in the County of Welland, to co-operate in construction and management with any similar corporate powers existing within the State of New York, or to be created by the Congress of the United States; said bridge to have 250 feet span, to rise above high-water mark 20 feet, to be of stone or iron piers, or wrought iron or steel superstructure, and to have a draw of 270 feet for vessels.

THE NEW ENGLISH BANKRUPTCY BILL.

Another attempt is about being made to establish such an equilibrium of opinion as will be equally acceptable to the creditor, the debtor and the public. The task will tax all the energies of the many legislators upon whose shoulders and by whose strength it will be supported. The proposal is to make a clean sweep in the beginning, by turning adrift the highest officials to the lowest and poorest hangers-on, superanuating some, and leaving the touting many to burrow as they can into the new warren. The basis of the new plan proposed is ostensibly for the benefit of the creditors, to whom great concessions are to be made, in the way of prevention rather than of cure; a rather doubtful case, which calls upon the creditors, after losing their money, to lose their time also. The first thing proposed is, when a man is made a bankrupt by his creditors, or when he suffers judgment to go by default, he should be adjudged bankrupt, and then his creditors would be called together to determine upon the right of different creditors to vote; this is to be done under the supervision of the Court, there being then three courses open to them. They might accept a composition and there end the affair, the bankruptcy terminating; they may agree to a deed of arrangement, proceed to elect a trustee from among themselves or other acceptable person, deciding upon his remuneration, whose duties would be to receive proof of debts and determine on them, subject to an appeal to the Court, realise assets, declare dividends, and have power to wind up the estates. As an additional security, an inspector (so termed) may be appointed to watch over the trustee, the accounts to be audited by the accountant in bankruptcy, the whole under the supervision of the Judge, who will also have the power to appoint a receiver, on the application of the creditors, having also the power to supersede the bankruptcy. The third course is, under justifiable circumstances, to bring the debtor into a criminal court. The object of the bankruptcy being for the benefit of the creditors, not for the bankrupt, the latter will not be permitted to make a bankrupt of himself, which provision was accorded to him when imprisonment for debt was exacted. It is also proposed to hold the bankrupt in after-acquired property for six-years, unless he has before that time paid a certain amount of dividend, say 10s. in the pound; the property only to be liable on the order of the Court. As a matter of course the creditors can release him from these responsibilities. Acts coming under the denomination of fraud, fraudulent concealment, obtaining goods while in a state of hopeless insolvency, &c., to be tried before the judges of the land, the laws on these heads being made more stringent. It is also proposed that all post-nuptial settlements made by a bankrupt, if between two years of the bankruptcy, unless he can prove that he was solvent at the time, shall be absolutely void.

The commencement of the programme reads well, so far as concerns the real interests of the creditors themselves, it being left to them to take the wisest course, and compromise, or get what they can from the estates and effects of the bankrupts; and in ordinary cases it is all that the creditor can reasonably require: but, in failures to a large amount, the creditors have before them nearly all the machinery, and all the evils and inconveniences, of the present system—fees, receivers appointed by the court to assist, accountants who know so well how to take the cream from the milk; fees of court, and the chance of being called upon to appear as prosecutor or witness at the Old Bailey, or any other criminal court. It is true, Commissioners of Bankruptcy vanish, but a well-paid Judge is to supply their place. Another onerous thing is, that when a man, being called upon to pay a debt, does not come into court, he should be made a bankrupt. This negatives at once the decaration that no man shall make himself a bankrupt, a friend being substituted for himself, a friend not difficult

to find on such occasions. Again, fraudulent motives shown are to be taken as proofs of guilt, not adduced by the creditor in accordance with the laws of the land, but to be disproved by the the debtor arraigned as a criminal. Again, he is called upon to furnish proof of his solvency when he made a post-nuptial settlement. The most honorable man, failing under circumstances over which he had no control, might be subjected to this ordeal, being called upon at short notice, and the means taken from him to furnish proofs involving expenses far beyond his means. In this free country, no man has a right to be called upon to indirectly criminate himself by failing to prove a negative.

The Scotch system of bankruptcy is acknowledged on all hands to work well. While securthe relics of the property of the defaulter from waste, or being legally frittered away, it effectually guards against the many open and barefaced frauds so much and so justly complained of as taking place in the Bankruptcy Court of Eng-England; and also against the rapacity of the *attachés* and parasites that find a living in the wreck, leaving little or nothing for the creditors. The bill may, with an immensity of tinkering, be made a good one, but moulded as it will be under a multitude of clauses, it will never be acceptable to the mercantile and trading classes if a loophole is left for the great defaulter to escape, while the trumpery scape-goat is sacrificed at the altar of public opinion. It is of no use saving the cheese-paring while the mice are actively devouring the interior. It is no satisfaction to the creditor to be called upon all trifling occasions to confront a petty larceny rogue at the bar of a criminal court. Devise means to prevent a crime, rather than frame modes for punishing it. Simplify the law, but do not encourage those who imagine they can speculate in giving credit on the strength of its stringent powers. It would be better to cling to imprisonment for debt than subject the innocent of intention with the guilty to the crucial test of an Old Bailey prosecution on questionable or debatable ground. Make the strictest inquisition into their affairs and the cause of default, but do it free from passion or prejudice; and avoid law whenever it may be avoided. As so much is said in praise of the Scotch system, why not give it a fair trial, with such additional clauses only as are imperatively required for this country.—*Investors' Guardian.*

DOMINION TELEGRAPH COMPANY.

(From the Northern Gazette.)

The readers of the *Gazette* have had their attention drawn to the above Company at various times, and certain features presented which appear anything but complimentary to the management. Extensive criticism on the part of the press and individuals has only served to reveal more glaringly the inception and consummation of immense jobs, the culminating one being in the letting of a contract for building two thousand miles of line at a price just double the full value of the work.

That the Dominion Telegraph Company was a speculation of outside adventurers we well know; but that a body of Canadian merchants could be found to wink at gross irregularities, we hesitated to believe, until recent investigations proved the fact. It is certainly a new order of things in our unassuming country, to find the Dominion directors knowingly sanctioning the absorption of $250,000 of the capital stock of the Company, despising the slow process of earning profits before using them, and avoiding, altogether, the commercial risks incidental to a new enterprise. Yet, such is indubitably the case, and the lucky individual who is the medium of all this magnanimity is an unobtrusive young man, by the name of Seela Reeve, whose daily round of duties involves nothing more onerous than a regular appearance at the well-stocked tables of the Rossin House, and a certain stately presence occasionally in the parlors of that famous hostelry. It is a fact for the confiding shareholders to take note of, that $250,000 of the capital stock is yet to be efilled from their pockets and absolutely mortgaged to above happy-go-lucky Seela, without a return to the value of a cent being asked for or required. Really, in this age of magnificent charities, we have heard of nothing equal to it, so completely does it stagger our limited comprehension.

Now, as to particulars. Some time since the stockholders at London held a meeting, and resolved to pay no further calls on their stock until more satisfactory information was vouchsafed. Hamilton, Owen Sound and Quebec have followed suit; as yet we have heard nothing to mitigate the case against the Directory. It is admitted a contract, *binding on the Company*, to pay Mr. Reeve, the promoter, contractor, and principal stockholder, the sum of $250 a mile, for two thousand miles of double wire. It is well known that such a line can be built for $150 per mile, which nets a profit of $250,000 on the contract! It is further well understood that the contract with Reeve was originally $400 per mile, and which was modified only by the storm created by the press against the concern and its backers. The directors were a party to both contracts, and the conclusion is almost resistible that Reeve was not the sole participator in the grand spoils.

Such is the present status of the great Dominion Telegraph Company, the Directors of which have already enjoyed one or two public feasts, and given out to the public charming accounts of the progress made. We cannot fancy the stockholders can be further gulled.

Dominion Telegraph Company.—The Quebec shareholders of this company held a meeting last week, and after hearing the report of Mr. Owen Murphy, who was deputed to Toronto to get a statement of the company's affairs, resolved that, "The gentlemen who have lent their names as Directors to the Dominion Telegraph Company are highly censurable for not attaching more moral importance to the obligation incurred by them as Directors." And further, "That the information furnished by Mr. Murphy, proves it to be unsound in its inception and in all its management, and that the meeting by this resolution binds itself to resist the payment of any calls made upon such stockholders, the expense of the defence to be borne *pro rata* to their stock." This was amended by adding the words "until such time as a satisfactory account is given." Resolutions of thanks to Mr. E. Wiman and the Montreal *Trade Review* for exposing the affairs of the company and to Mr. Murphy for the valuable services rendered the shareholders by his visit to Toronto.

The above are strong resolutions. Coming, as they do, from a number of gentlemen, members of the Company, who could have no hostility to the project; and this, too, after hearing the circumstances of its organization and management fully explained by one who penetrated to the bottom of it; they must have great weight with the public.

Commercial.

Mr. E. Wiman, of the firm of Dun, Wiman & Co., proprietors of the Mercantile Agency, has supplied a daily city contemporary with some facts and suggestions respecting the present unsatisfactory condition of trade. He says, "a general feeling of apprehension and perceptible want of confidence prevails. Failures are frequent, and disastrous losses loom up at every turn; and, what is worse than all, a very low grade of mercantile morality is painfully prevalent." The primary cause of this we consider to be increased importations of goods. In illustration of this point he gives the following from the Trade Returns of Canada.

Imports into Canada (East and West) of kinds of goods from the year 1852 to 1867, clusive:

	Imports of Dry Goods.	Total Imports.
1852	8,240,640	20,286,49
1853	13,203,076	31,981,43
1854	14,660,684	40,529,32
1855	9,509,773	36,086,16
1856	13,173,288	43,584,38
1857	12,123,511	30,430,59
1858	7,398,904	29,077,85
1859	10,825,564	33,535,91
1860	12,451,125	34,412,43
1861	13,156,397	39,750,16
1862	11,163,239	45,980,93
1863	11,481,107	41,312,20
1864 half year	7,987,919	21,406,71
1864-65	13,546,997	39,851,99
1865-66	19,874,852	48,607,03
1866-67	21,486,754	52,633,67

By a glance at these figures will be seen a v remarkable increase from 1852 to 1856, resulti doubtless, in largely augmenting the crisis of year following. But the increase from 1861 1867 is also very great, especially in dry good from thirteen to twenty-one millions. The e mous rate, however, of increase will be best s in estimating the per centage as compared with growth of the population.

	1861	1867	Per centage Increa
Population	2,507,675	3,091,000	23¼
Imports of Dry Goods	$13,156,397	$21,486,564	63¼
Total Imports	$39,750,161	$52,633,670	32½

The population in 1867 is estimated at annual rate of increase as actually took place ten years previous to the last census, and can be far out of the way.

In addition to the dry goods imported there now four-and-a-half or five millions of dollars manufactured at home, against about one million 1861; so that adding the home manufactured the imported we have twenty-five millions of lars of dry goods thrown on the market in 186 against fourteen millions in 1861—an increase eleven millions of dollars.

This is an increase of at the rate of 78⅜ per ce as against an increase in population of certai not exceeding 25 per cent. In other words, h the quantity of goods thrown upon the mar kept pace only with the increase in population, should have only seventeen and-a-half milli instead of twenty-five millions. In round figu we have been putting dry goods into the coun at the rate of $8, in 1867, for each man, wom and child; whereas in 1861 the quantity for ea inhabitant was only $5.60. [There are one or t considerations that have an important bearing the question here raised which Mr. Wiman not stated. The normal demand for dry go from consumers has increased much faster than t increase of population. This arises from the crease of wealth, and hence of purchasing pow giving rise to a desire for more expensive and st lish goods; so that Canadian factory made, a imported cloths, yarns, blankets, &c., have be largely substituted for the coarse woolly ho made articles of which every well-to-do farmer f merly produced, at least, enough for his own requirements. Besides, no account is taken of large quantity of goods annually exported—a gre portion smuggled—since the United States ha raised their import duties to the present hi point. In Secretary Well's last report, he stat if our memory be not at fault, that some fourte millions were annually lost to the revenue this way. So that, in our opinion, Mr. Wima figures put the case a little too strong.—Ed. M. T.]

A table is then given showing the relative imports at the principal ports of Ontario, compiled by Mr. Andrew Robertson, which has already appeared in those columns.

Mr. Wiman, very properly, censures the present low standard of credit, and the disposition among farmers' sons, and others, to rush into mercantile life, for which they are wholly unfit. In consequence of over-importations, excessive stocks, and a pressure to sell, merchants encourage these classes, run accounts with them, foster and nurse and carry these accounts on. If the market were only fairly supplied with goods, accounts of this character would never have been undertaken. In Ontario, at the present moment, there are three stores where there ought to be only two. In illustration of this Mr. Wiman starts with Chatham. There there are fifty-two stores. He says it is alleged that there are more stores in Chatham in which assorted stocks of dry goods are to be found than in the whole city of Detroit. Take Godench as another instance, where may be found thirty-seven dry-goods and grocery stores ; Stratford 24; St. Mary's 20; Seaforth, a place without an existance eight years ago, 20; Brantford, 53; Ingersoll, 25; Woodstock, 37; St. Catharines, 52. Coming east of Toronto, we find in Port Hope, 29 stores, all of more or less importance ; Belleville, 37; and as far east as Renfrew, a town which long ago reached its growth, there are now 14 stores. But it is needless to mention further instances, except perhaps such towns as Paisley, in which there are 12 stores; Lucknow, 9; Owen Sound, 14,—in order to show that in towns, new and old, on the railways and off them, the same state of things exists.

The Insolvent Law, Mr. Wiman thinks, is not the cause of the present state of things, but only has the effect of aggravating the complaint. To show to what extent the Insolvent Law has been availed of, the following statement is given :

From 1st Sept. to Dec. 31st, 1864	437
For year 1865	481
" 1866	792
" 1867	772
" 1868	650
From 1st Jan. to March 31st., 1869	200
Total number of insolvents	3,332

As this includes traders and non-traders, and many who, in the earlier years of the law, availed themselves of its provisions to get rid of old embarrassments, it is difficult to form an idea from this of the number of merchants that have failed.

Mr. Wiman then refers to the ease with which compromises are made, as the most alarming feature of the whole case. If one-third of the retail trade are to get off without paying one-half their debts, nothing will prevent the other two-thirds from doing the same. With the trade overcrowded, as at present, it is impossible that all could make an honest living out of a trade that could be better done by half the number. Some one must suffer from the ruinous competition, the cutting in prices, the profitless exchange of goods for less money or poor outstandings. Who is to be the sufferer ? It is clear that he who gets rid of his debts at 10s. in the pound has much the best of the bargain. While the wholesale merchant suffers a direct loss, the honest, capable and sound retailer is equally a loser. Take a small town in which there are six stores. Two of them fail, settle at five to ten shillings—in other words, at their stock and assets at less than half price, and how completely can they defy competition from their solvent and very probably more honest neighbours. Is it possible that the four remaining retailers can live and pay twenty shillings in the pound ? The thing is impossible ; and thus like children playing with a row of bricks on end—start one, and the whole lot will fall.

Mr. Wiman then goes on to elaborate this idea, and concludes by making some suggestions in accordance with the foregoing, which are well worthy the attention of every one in trade. Importations of dry goods should, in the first place, be cut down fifty per cent. ; the present system of granting compositions should be stopped, at once; the Bankrupt Law should be so amended as to aid the wholesale merchant in reforming the present iniquitous practices; the term of credit should be shortened, and the system of renewals be done away with. There are already signs of a better state of things in the reduced importations of dry goods within the past year, and in a strong feeling among merchants in favor of the much needed changes pointed out.

Toronto Market.

Merchants are acting with great caution in every branch of the importing trade. They are not opening new accounts, and are generally very careful about extending old ones. The spring fleet is now daily arriving at Quebec with the usual stock of groceries, heavy hardware, crockery, &c. ; these goods will be to hand shortly.

Flour.—Receipts, 2,014 barrels, and 3,350 barrels last week. The market for Superfine is dull ; the offerings are in excess of the demand ; sales of one or two 100-barrel lots at $4.05 f. o. b. Spring Extra has met with some demand ; a lot of 100 barrels sold at $4.15 on cars. Fancy, nominal at quotations. Extra held at $4.40 to $4 50 ; no sales. No Superfine in market.

Grain.—*Wheat*—Receipts, 1,000 bush., and 3,540 last week. Owing chiefly to the depressed state of the English market, there is almost no demand for Wheat, and only a small business was done. Spring is dull, and offering at 95c to 96c, with some small sales at 93c to 94c. Two cars sold at 94c on Northern cars, and 5,000 bush. at Whitby on p.t. Fall is held at $1.00 to $1.05, but it is impossible to say what figures could be realized for a round lot, as there are no buyers. *Barley*—Receipts very small ; market inactive and nominal at $1.00 to $1.05 ; no demand and few sales. Sale 200 bush. choice White at $1.04 in store here. *Peas*—Receipts trifling ; market steady and unchanged from last week ; holders ask 80c, and there is some demand for car loads at our quotations. *Oats*—Receipts, 500 bush, and 1,800 bush. last week. The market has ruled firm, but closed with an easier feeling at 52½c ; sales 500 bush at 52½c delivered in the city, and two or three cars at 53c on track. *Rye*—Nominal at 60c on the street. *Seeds*—Timothy is firm, and has advanced, buyers offering $2.40 to $2.55, and sellers asking $2.75. The season is now about over, and it is doubtful if our quotations will be maintained more than two or three days. Clover is lower, and difficult to place ; round lots could be had at $5.25 to $5.60. Flax $2.00 to $2.25.

Shipments. —The following vessels cleared from this port with Barley since the opening of navigation : Schr. Paragon, with 11,100 bush. ; the Oddfellow, with 3,000 bush. ; the Wanderer, with 4,804 bush., all for Oswego—total, 18,904 bush. The Sea Gull cleared with 8,000 bush. Malt for Chicago. The following vessels cleared for Oswego with Wheat : The D. M. Foster, with 16,373 bush. ; the Eureka, with 8,757 bush. ; the Sea Gull, with 12,600 bush. ; the New Dominion, with 1,000 bush. ; and the Tranchemontagne, with 8,613 bush.—total, 57,343 bush.

Hides and Leather.—*Hides.*—The market is very dull, and weak, at quotations, and a decline to 5½c. is looked for. *Leather*—is quiet at unchanged quotations.

Petroleum.—The Combination has ceased, and in consequence prices are unsettled. Our quotations are nominal ; some decline in prices is expected.

Freights.—The following are the Grand Trunk Railway Company's summer rates from Toronto to the undermentioned stations, which came into force on the 10th inst. :—Flour to all stations from Bellville to Lynn, inclusive, 25c ; grain per 100 lbs. 13c ; flour to Brockville and Cornwall, inclusive, 30c ; grain 15c ; flour to Montreal, 35c ; grain 18c ; flour to all stations between Island Pond and Portland, inclusive, 75c ; grain 38c ; flour to Bostou, 80c gold ; grain 40c ; flour to Halifax, 90c ; flour to St. John, 85c.

Halifax Market.

Breadstuffs.—April 20—We have to report a continued demand for Supers during the past week. The enquiry for No. 2's has fallen off, and is likely to be restricted while Supers are low. White Wheat Flours continue dull (nominal). Oatmeal is offered freely, with small sales, with considerable local receipts. Cornmeal, in sympathy with U. S. market, has declined, and is dull and nominal. We quote : White Wheat Extra (Fall), $6.25 to $6.50 ; Fancy, $5.90 to $6.00; Supers, $5.50 to $5.60 ; No. 2, $4.75 to $5.00 ; Middlings, $4.50 to $4.75. Cornmeal, K. D., $4.00 to $4 05 ; F. G. $3.80. Oatmeal, $6.50 to $7.00. White Beans, $2.50 to $3.00.

West India Produce.—Sugar and Molasses continue without quotable change, and few transactions. Rum unchanged ; Coffee active at quotations. We quote : Sugar, V.P., 10¼c to 11c ; Porto Rico, 9½c to 9¾c ; Barbadoes, 9c to 9½c (nominal). Molasses, Cienfuegos, 41c. to 42c ; Trinidad, 40c to 41c. Rum, 58c to 60c for Demerara, in bond. Coffee, Jamaica, 12c, nominal.

Exchange—Bank Drafts, London, at 60 days, at 13 per cent ; Montreal sight at 4 per cent ; New York Gold, 4 per cent ; Currency, 21 per cent discount ; St. John, N.B., 3 per cent pramium.

Trade of Guelph.

The report of the Guelph Board of Trade gives the following :—Goods entered at Guelph, for the twelve months, ending 31st March, $250,015; duty, $269,12; value of exports entered, $279,813. The flour and grain exported, amounted to 130,000 barrels, and 240,000 bushels. Cattle shipped by the G. T. R. R. and G. W. R. R. 8,553, valued at $427,650; Sheep do. 4,000, valued at $16,000; Sheep Skins bought 17,000lbs, $289,000 ; Wool, 133,000 lbs., $37,240; Hogs bought, 17,000, $289,000; Packed Hogs 6,500; Butter, 7,000lbs. The average quantities of grain grown in the County of Wellington were:—Fall Wheat 20 bushels to the acre; Spring 15; Peas 10; Oats 15; Barley 30.

Cotton.

The following is a statement showing the stocks of cotton in Liverpool and London, including the supplies of American and Indian produce ascertained to be afloat to those ports :

	1868.	1869.
Stock in Liverpool.....Bales	356,550	318,960
" London.....	54,809	77,850
American cotton afloat.....	227,000	152,000
Indian "	204,121	302,854
Total.....	842.480	851,664

Tea.

A telegram from Hong-Kong, dated Feby. 8th, gives the total exports from China and Japan since the commencement of the soason at 135,000,000 lbs.

NOTICE

IS hereby given that the Liquidators of the Western Insurance Company, Limited, will apply to the Minister of Finance for his warrant authorizing the withdrawal of the deposit made by said Company with the Minister of Finance, as required by statute of the late Province of Canada, chapter 83 of 22nd Victoria, the said Company having ceased to do business in Canada.

THE TORONTO, GREY AND BRUCE RAILWAY COMPANY.

TOTAL LENGTH, ABOUT 200 MILES. INCLUDING BRANCHES TO KINCARDINE AND OWEN SOUND.

Length of First Section, from Toronto to the Garafraxa Road, about 70 Miles.

TOTAL CAPITAL, $3,000,000.

CAPITAL REQUIRED FOR THE FIRST SECTION, $1,050,000.

Bonuses already Voted by Municipalities for the First Section of the Main Line, $425,000.

As follows:—City of Toronto, $250,000; Albion, $40,000; Caledon, $45,000; Mono, $45,000; Orangeville, $15,000; Amaranth, $30,000.

Bonuses yet to be obtained for the first section, $77,000.
Bonuses required and obtainable to extend First Section, from Arthur to Mount Forest, $138,000.
First issue of Stock in $100 shares, $325,000.
Upon which bonds will be issued for $300,000.
The arrangements for the extension to Mount Forest, now in progress, when completed, will involve the further issue of Stock and Bonds to the extent of $125,000.

President—John Gordon, Esq.
Vice-President—A. R. McMaster, Esq.

DIRECTORS:

Hon. M. C. Cameron, Provincial Secretary; Hon. John McMurrich, M.P.P.; S.B. Harman, Esq., Mayor of Toronto; Noah Barnhart, Esq.; H. S. Howland, Esq., Vice-Pres. Bank of Commerce; James Michie, Esq. (Fulton, Michie & Co); John Crawford, Esq., M. P; William Elliot, Esq. (of Messrs. Lyman, Elliot & Co.); Thos. Swinarton, Esq., M.P.P.; R. A. Harrison, Esq., Barrister, M.P.; J. E. Smith, Esq., Collector of Customs, Toronto; D Sinclair, Esq. M.P.P., North Bruce; John Turner, Esq (of Messrs. Sessions, Turner & Co.) George Laidlaw, Esq; Thos. Scott, Esq., M.P.P.; Robert Paterson, Esq.; Thos. Lailey, Esq.; T. C. Chisholm, Esq.; Frank Smith, Esq.; C. J. Campbell, Esq.; Adam Crooks, Esq., Q.C.; John Worthington, Esq.

Bankers—Bank of Toronto, Bank of Commerce.
Brokers—Campbell & Cassels, Blaikie & Alexander.
Secretary—W. Sutherland Taylor.

TEMPORARY OFFICES,—46 FRONT STREET, TORONTO.

PROSPECTUS.

The Provisional Directors of the Toronto, Grey and Bruce Railway Company, finding that further progress in the building of Broad Gauge Railways in Canada, with English Capital, was no longer financially practicable or expedient for lines of Railway projected for local traffic, and having become cognizant of the successful working for a number of years of Railways built on the three feet six gauge in the Kingdoms of Norway and Sweden, in the Colonies of Queensland, in India, and elsewhere, and that these Railways were capable of accommodating a traffic of about a million, or a million and a half of tons of goods per annum, and of carrying passengers at a speed of twenty-five to thirty miles an hour, and that the total traffic of the Northern Railway of Canada has not exceeded 195,000 tons, and 140,000 passengers per annum, have therefore resolved to construct the Toronto, Grey and Bruce Railway on the three feet six inch gauge, in the most economical and efficient manner, at a total cost of $15,000 per mile.

The Directors have also noted Capt Tayler's (now Vice-President Grand Trunk Railway) report on the Festiniog Railway, two feet gauge, in Merionethshire, Wales, the freight and passenger traffic of which approximates closely to that of the Northern Railway of Canada, and, with the exception of the lumber traffic, largely exceeds that carried on the Lindsay and Port Hope, or on the London and Port Stanley Railways.

With a view to the just apportionment of the risks incidental to capital invested in railway enterprise in Canada, it was also resolved to ask the municipalities most to be benefitted by the construction of the Railways, for one-third of the total cost by way of bonus or gift. The proportion of the cost has already been voted for the first section (excepting small sums yet obtainable), in debentures bearing six per cent interest, payable in 20 years—securities which are unexceptionable, and will sell at or near par.

Of the remaining capital, it is proposed now to offer $325,000 to be subscribed in stock. If that or a large amount is not so subscribed, bonds will be issued for the balance of about $300,000.

Local capital to the extent of *more than* two-thirds of the cost of the railway will be security to holders of the bonds of this Company.

The interest and dividend bearing capital will not exceed $9,000 per mile.

The Directors, although anxious, and having authority under their charter to make the village of Mount Forest the terminus of the first section, are unwillingly constrained to select an eligible point, nearer, on the Garafraxa Road, in the Township of Arthur.

This decision may be altered, and Mount Forest made the terminus of the first section, by the Municipalities concerned voting the amounts of bonuses, as required by the Company.

In either case the capital derivable from bonusses will be about the same per mile.

Arrangements to complete the remaining sections of the Railway through the counties of Bruce and Grey, will be prosecuted with unremitting vigour, as soon as the first section is fairly under construction.

The Garafraxa Road, the great highway from Owen Sound, through the counties of Grey and Wellington to Guelph; and the other great highway, the Elora and Saugeen Road, from Southampton, through the counties of Bruce and Wellington, ultimately uniting with the Garafraxa Road, *passes within from 5 to 8 miles of the proposed terminus of the first section* of the Railway, to connect with which a gravel road will be built; while the Toronto and Sydenham gravelled road, from Chatsworth, intersecting the Durham and Collingwood road, reaches to within twelve or fifteen miles of the Orangeville station, and when completed, together with the others, assures to the Toronto, Grey and Bruce Railway the traffic of the whole heart of the North-western peninsula.

The bulk of the products of the great counties of Bruce and West Grey is shipped by water, on account of the distance from the Grand Trunk Railway, only a part being moved in the autumn, the principal portion being marketed and stored, during winter, at the ports on the shore of Lake Huron and the Georgian Bay. At four of these points there are now stored a quarter of a million bushels, while the aggregate at all the points amounts to about 500,000 bushels.

The loss of interest on the capital thus invested, together with the proportionately lower prices paid for produce during winter in these remote districts, are serious drawbacks to their prosperity.

The distance deprives producers of the facilities afforded by the *Grand Trunk Railway, and the Montreal Steamship line* for moving, in winter, produce to markets, as well as of the very great advantage of Railway communication to the flourishing city of Toronto, (the best distributing point either in winter or summer,) and now the capital of Ontario.

The total area between the Grand Trunk and the Northern Railway of Canada is 6,800 square miles, of the richest and most fertile land in Canada. The Toronto, Grey and Bruce Railway will intersect this district, about mid-way between the two other Railways, and when completed will confer immense benefits on the people in that district, while it is quite evident that the general business *which will be brought to the city of Toronto* (exclusive of through traffic) will equal that brought to it by all the other Railways.

The Toronto, Grey and Bruce Railway will obtain a much larger passenger, grain, cattle, and first-class goods traffic than the Northern Railway; while the sawn pine, which *must be imported* to supply the absence of that building material, and the export of square hardwood timber, saw oak, elm, cherry, &c., staves, bark, fencing, and cordwood (fuel), will afford a very large and remunerative business to the Toronto, Grey and Bruce Railway.

The Freestone and other stone used for building materials in Toronto are now imported from Cleveland or Kingston. On the route of the T. G. & B. R. there are, near Orangeville, extensive quarries of the very best soft and hard brown and white freestone, which will be in great request for export and general city building purposes. The advantages to the Railway and this city, of these quarries are not yet generally appreciated.

The subjoined tables of the traffic of the Northern Rail

way will serve to illustrate the local business of a railway 5 miles long, through an average country in Canada.

IN 1861.

The Local Traffic of the Northern Railway of Canada amounted to		120,000 tons.
Through		25,000 "
Passengers		100,618 "
Local Receipts	$362,507	
Through	48,432	$410,939
Running expenses		68 per cent.
Excess of earnings over running expenses on local traffic	$115,982	
Do. on Through Traffic	15,498	
Local earnings equal to 8¾ per cent. on a cost of $15,000 per mile. Or 12½ on $10,000 per mile.		

1864.

Local Traffic		180,000 tons.
Through Traffic		8,344 "
Passengers		104,346 "
Local Receipts	$452,382	
Through "	14,884	$467,266
Running expenses		52 per cent.
Excess of earnings over running expenses on Local Traffic	217,143	
Do. on Through Traffic	7,144	
Local earnings equal to 15 2-5 per cent. on a cost of $15,000 a mile. Or 28 1-10 per cent. on $10,000 per mile.		

1863.

Local and Through Traffic		194,583 tons.
Passengers		138,965 "
Local Receipts	$537,380	
Through "	12,690	Total $550,070
Running expenses		61 per cent.
Excess of earnings over running expenses on Local Traffic	$209,578	
Do. on Through Traffic	4,949	
Or equal to 14⅞ per cent. on $15,000 a mile (local earnings). Or 22⅓ per cent. on $10,000 per mile.		

1861—Running expenses per cent. 68; local tonnage, 120,-00; through tonnage, 25,000; total tons, 145,000; passen-ers, 106,618; Local receipts, gross, $362,507; through re-eipts, gross, $48,432; total receipts, gross, $410,939: local eceipts, nett, $115,982; through receipts, nett, $15,498; ividend on $15,000 a mile, local, 8 1-3; dividend on $15,-00 a mile, through, 1 1-10.

1864—Running expenses per cent. 52; local tonnage, 30,700; through tonnage, 8,346; total tons, 189,046; pas-engers, 104,346; local receipts, gross, $452,382; through eceipts, gross, $14,884; total receipts, gross, $467,266; cal receipts, nett, $217,143; through receipts, nett, $7,-14; dividend on $15,000 a mile, Local, 15 2-5; dividend on 15,000 a mile, through ½.

1863—Running expenses per cent. 61; total tons, 194,-83; passengers 138,965; local receipts, gross, $537,380; hrough receipts, gross, $12,690; total receipts, gross, 550,070; local receipts, nett, $209,578; through receipts, ett, $4,949; dividend on $15,000 a mile, local, 14⅞; divi-end on $15,000 a mile, through ⅓.

Total tons, 528,629; passengers, 349,929; local receipts, oss, $1,352,269; through receipts, gross, $76,006; total ceipts, gross, $1,428,275; local receipts, nett, $542,703; hrough receipts, nett, $27,591; dividend on $15,000 a mile, cal, 12 5-6; dividend on $15,000 a mile, through, ⅔.

AVERAGE—Total tons, 176,209; passengers, 116,643; local ceipts, gross, $450,756; through receipts, gross, $25,335; tal receipts, gross, $476,091: local receipts, nett, 180,901; hrough receipts, nett $9,197; dividend on $15,000 a mile, cal, 12 5-6, dividend on $15,000 a mile, through ⅔.

From the above data it will be seen that the Northern ailway carried an average for those three years of 176,209 ns of freight; and 116,643 passengers; the average gross ceipts being $450,756, while the nett receipts from local affic were $186,901, equal to an annual dividend of 12 5-6 r cent. on a cost of $15,000 per mile.

It is remarkable and of consequence to intending sub-ribers for stock of the T. G & B. R., that the net re-ipts for through traffic for the same years only averaged ,197 per annum, equal to a dividend of ⅔ of one per cent a cost of $15,000 per mile. This fact clearly proves the lue of local as against through traffic.

The grain, cattle, pork, goods and passenger traffic tri-tary to the first section of the Toronto, Grey and Bruce ilway will equal, if not exceed, for the same length of e, the local traffic of any other railway in Canada.

The following estimate of traffic from the first section the Toronto, Grey and Bruce Railway, is based upon lculations on the returns made by the Municipalities, d an intimate acquaintance with their trade and re-urces:

Passengers, 140,000	$145,000
Cereals, 2,000,000 bushels	100,000
Flour, 50,000 barrels	15,000
General goods, 50,000 tons	150,000
Square timber, 1,000,000 cubic feet	30,000
Staves, lumber, bark, posts, &c	10,000
Cordwood, 20,000 cords	25,000
Mails and express	20,000
Total	$490,000

Allowing 60 per cent for running expenses, the net earn-gs would amount to $196,000—equal to a dividend of 18 r cent on a cost of $15,000 per mile.

Allowing reasonable margin for increased cost or less ffic (the moderate estimate of which will be undisputed,) ere remain the *strongest reasons* for anticipating a divi-nd of 10 per cent per anuum.

By the Act of Incorporation, the Company is specially bound to carry cordwood, and to afford every necessary facility for so doing at the specified rate of 3 cents per cord per mile for dry wood, for all distances under 50 miles, and 2½ cents per cord per mile for all distances over 50 miles—a rate which has been found satisfactory, by test of actual experience, on the Government Railways of New Brunswick.

This condition will enhance the cost of fuel to the Company, but the increased traffic and prosperity consequent upon this trade, it is fully believed, will more than compensate for the extra cost of fuel.

The gentlemen who have promoted and borne the preliminary expenses of this enterprise, and who desire to see it carried out in good faith on sound commercial principles, *are resolved*, in so far as their influence is equal to the task, to have this railway controlled by the most respectable capitalists of this city and the country on the route of the railway, who may take stock in it; to convert their own securities, and pay cash to contractors, and not to surrender control of the railway to contractors or bondholders; to let the contracts in a manner to ensure the healthiest competition. In other words, *to have value for the money from the turning of the first sod to the laying of the last rail.*

The country on the route of the first section, with the exception of a short distance in Caledon, is one of the easiest for railway construction in Canada, especially the 22 or 25 miles from Orangeville to the Garafraxa Road.

In the Township of Caledon—the country is hilly and rolling. This portion of the route was carefully and completely surveyed and cross-sectioned under the auspices and by the direction of Mr. J. E. Boyd, M.I.C.E., and Engineer for the Government of New Brunswick, before the Company obtained their charter, and, as anticipated, no real difficulties were encountered; the highest grade, with moderate cuttings, being 65 feet to the mile. Mr. Charles Donglas Fox examined, for the Company, the figures and the profile, and, together with Mr. Boyd, gave their written opinion that the cost of this portion, per mile for earth-works, would not exceed $15,000. There are no rock cuttings.

Ballast, ties, timber for bridges, and lumber for fences, are convenient and available at the lowest cost in Canada, along the whole route of the first section.

Every other consideration, in the first instance, will be subordinated to the construction of a first-class permanent way; the best of timber bridges; deep and good ballasting. Rails to weigh 40 lbs. to the yard, and to be selected of the best quality.

Arrangements are in progress which will secure to the Company free right of way through the city, and egress, if desired, for a few miles out of the city, on the line of the Grand Trunk, by means of a third rail; and the disposition of the proprietors, and other circumstances along the line are so favorable, that the whole right of way will be obtained for an amount not exceeding $22,000.

Station grounds and dockage will be had in this city, either free, or for a nominal rental.

It is the desire of the Provisional Directors to have their Chief Engineer appointed, with the concurrence, and subject to the approval of the Company's Consulting Engineers, Sir Charles Fox & Sons, who will be held responsible for the excellence of the works, economy of construction, and the success here of the system of narrow gnage railways, of which they have had large experience elsewhere, and with the initiation of which in this country they are honorably identified.

On these premises the Provisional Directors appeal for stock subscriptions to the citizens of Toronto, to the municipalities, and to the business men and proprietors of land along the route of the railway, and to capitalists elsewhere, believing that the most cautious and prudent investors will find the stock of the Toronto, Grey and Bruce Railway worthy of their attention.

The stock books will be opened at the Company's offices, Front street, on the 21st April, at 10 o'clock, a.m. Forms of application for shares can be had on application to the secretary, and from the reeves and clerks of the several municipalities on the route of the railway, and from Messrs. Campbell & Cassels, and from Messrs. Blakie & Alexander, Toronto, and from McDougall & Davidson, Montreal.

In conjunction with the Toronto and Nipissing Railway Company, it is agreed that a member of the firm of Sir Charles Fox & Sons, Consulting Engineers, will be invited here immediately by telegraph, when active operations will be commenced.

EDINBURGH LIFE ASSURANCE COMPANY.

FOUNDED 1823.

AMOUNT OF ACCUMULATED AND INVESTED FUNDS—OVER ONE MILLION STERLING.

HEAD OFFICE—EDINBURGH.

PRESIDENT—The Rt. Hon. the Earl of Haddington. MANAGER—D. Maclagan, Esq. SECRETARY—Alex. H. Whytt, Esq.

CANADIAN OFFICE ESTABLISHED 1857. WELLINGTON STREET, TORONTO.

CANADIAN BOARD—Hon. John Hillyard Cameron, M.P., Chairman. J. W. Gamble, Esq., L. Moffatt, Esq., Hon. J. B. Robinson, C. J. Campbell, Esq. David Higgins, Secretary.

THE Edinburgh Life Assurance Company offer to the public the advantages of a Canadian as well as a British Company. They have invested a large amount of money on securities in this country, and the Toronto Local Board have full power, by an Imperial Statute, to take risks, make investments, and settle claims in Canada, without reference to the Head Office, Edinburgh. Some of the old Policies in the Company, which became claims during the past year, were settled by payment of amounts double of those originally insured, in consequence of the large bonuses that accrued on the Policies.

Every information that intending assurers may require can be obtained at the Company's Office in Toronto, or at any of the Agencies which have been established in the principal towns in Canada.

J. HILLYARD CAMERON, CHAIRMAN. (36-1y) DAVID HIGGINS, SECRETARY.

Royal Fire & Life Insurance Company

OF LIVERPOOL AND LONDON.

CAPITAL, TWO MILLION STERLING,

WITH LARGE RESERVE FUNDS.

ANNUAL INCOME, - - - - - - - - - £800,000 STG.

FIRE BRANCH.

Very moderate rates of Premium. Prompt and liberal settlement of losses. Loss and damage by explosion of gas made good. No charge for policies or transfers.

LIFE BRANCH.

The following are amongst the important advantages offered by this Company:

Perfect security to assurers. Moderate rates of premium. Large participation of profits—the bonuses being amongst the largest hitherto declared by any office, and divided every five years. EXEMPTION OF ASSURED FROM LIABILITY OF PARTNERSHIP. Claims settled promptly on proof of death. Liberal allowance for surrendered policies. Forfeiture of policy cannot take place from unintentional misstatement. No charge for policies or assignments. Medical fees paid by the Company. Tables and forms of application, with all other information, can be obtained on application to

FRANCIS H. HEWARD,

IN 8,000 SHARES—$25 EACH.

President—WM. EDGAR, Esq., Hamilton. Vice-President—ROBERT REFORD, Esq. (Messrs. Reford & Dillon), Montrea

Secretary-Treasurer—A. McK. COCHRANE, 388 St. Paul Street, Montreal.

THIS COMPANY, with machinery now in working order and in course of construction, will be able to manufacture this year FROM TEN TO TWELVE THOUSAND TON OF GOOD FUEL. Actual working shows—

I. That the fuel can be produced for $1.45 a ton, and with the improved imachinery, at a much less cost.
II. That, for steam purposes, one ton of it is superior to one cord of wood, in the proportion of 31 to 27.
III. That, for domestic purposes, it is equal to wood or coal, and leaves very little ashes—about five per cent.

At the annual meeting of the Company in Montreal, it was decided to offer one thousand shares of Stock in Toronto. Mr. Isaac C. Gilmor has been appointed agent of t Company in Toronto, and is authorized to receive subscriptions for the Stock.

Prospectus, Map of the Property, and further information may be obtained by addressing

ISAAC C. GILMOR, 58 Colborne Street, Toronto.

LIFE INSURANCE COMPANY,
HARTFORD, CONNECTICUT.

WOODBRIDGE S. OLMSTEAD, SECRETARY, | JAMES GOODWIN, PRESIDENT,
EDWIN W. BRYANT, ACTUARY, | ZEPHANIAH PRESTON, VICE PRESIDENT.
LUCIAN S. WILCOX, MEDICAL EXAMINER.

Organized in 1846. Charter Perpetual.

The Largest Mutual Life Insurance Company. Numbering Over 75,000 Members.

BEING A PURELY MUTUAL COMPANY ITS ASSETS BELONG EXCLUSIVELY TO ITS MEMBERS,

ASSETS, $21,000,000.—Acquired by prudent and economical management of twenty-two years, without the aid of a single dollar of original capital.

SURPLUS ASSETS, $6,361,967—All profits divided among the members. Each policy holder is a member. There are no stockholders.

ITS DIVIDENDS—Have averaged over 50 per cent. annually. Total amount of dividends paid the members since its organization, $4,397,142.

ITS SUCCESS UNPARALLELED—It has arrived at the extraordinary condition where the income from annual interest alone is more than sufficient to pay all the losses. Total amount of losses paid by the Company, $6,868,528.

ITS RESPONSIBILITY—For every $100 of liabilities it has $154 of assets.

LAST YEAR'S PROSPEROUS BUSINESS.

Amount insured fiscal year, 1867 .....$45,647,191 00 | Income received fiscal year, 1867.....$7,530,886 19

During its last fiscal year this Company paid to its living members, and to the families of deceased members, nearly $2,000,000, and at the same time added more than four millions to its accumulated capital.

The whole record of this Company has been one of prudent management and prosperous advancement. Among the older and leading Life Insurance Companies its average ratio of expenses to income has, through its entire history, been the lowest of any.

ITS LIBERALITY—It accommodates the insured by giving credit for part premium, and grants insurance to meet all the contingencies and wants to which Life Insurance is applicable.

It issues policies on a single life from $100 to $25,000.

MEDICAL REFEREES—J. WIDMER ROLPH, M.D.; H. H. WRIGHT, M.D.

LIFE ASSOCIATION OF SCOTLAND.

Invested Funds Upwards of £1,000,000 Sterling.

THIS Institution differs from other Life Offices, in that the BONUSES FROM PROFITS are applied on a special system for the Policy-holder's personal benefit and enjoyment during his own lifetime, with the option of large bonus additions to the sum insured. The Policy-holder thus obtains a large reduction of present outlay, or a provision for old age of a most important amount in one cash payment, or a life annuity, without any expense or outlay whatever beyond the ordinary Assurance Premium for the Sum Assured, which remains intact for Policy-holders' heirs, or other purposes.

Capital and Invested Funds.....£750,000 *Sterling.*

ANNUAL INCOME, £220,000 STG. :

Yearly increasing at the rate of £25,000 Sterling.

THE important and peculiar feature originally introduced by this Company, in applying the periodical Bonuses, so as to make Policies payable during life, without any higher rate of premiums being charged, has caused the success of the BRITON MEDICAL AND GENERAL to be almost unparalleled in the history of Life Assurance. *Life Policies on the Profit Scale become payable during the lifetime of the Assured, thus rendering a Policy of Assurance a means of subsistence in old age, as well as a protection for a family*, and a more valuable security to creditors in the event of early death; and effectually meeting the often urged objection, that persons do not themselves reap the benefit of their own prudence and forethought.

No extra charge made to members of Volunteer Corps for services within the British Provinces.

INSURANCE CONVENTION.

In accordance with a circular issued some time ago, a convention of the representatives of Mutual Insurance Companies was held in Hamilton, on 28th April. The companies represented, and their representatives, were as follows :—Beaver Mutual, Toronto, S. Thompson and C. E. Chadwick ; Toronto Mutual, Toronto, S. Thompson and C. E. Chadwick ; Ontario Farmers' Mutual, Whitby, L. Fairbanks and J. B. Bickell ; Agricultural Association, London, Wm. Niles, W. R. Viniug, and D. C. McDonald ; Niagara Mutual, St. Catharines, Thos. H. Graydon ; Wellington Mutual, Guelph, Charles Davidson ; Waterloo Mutual, Waterloo, Moses Springer and C. M. Taylor ; Ontario Mutual, London, James Johnston ; Canada Farmers' Mutual, Hamilton, R. P. Street and Thos. Stock ; Hamilton Mutual, Hamilton, N. Hammond and W. G. Crawford ; Gore District Mutual, Galt, Thomas M. Simons and Robert McLean.

Mr. C. E. Chadwick, of Ingersoll, was called to the chair, and Mr. Robert McLean, of Galt, was appointed Secretary. The circular calling the convention having been read, a discussion arose as to the best mode of proceeding, when the following resolution was carried :

Moved by Mr. Thompson, seconded by Mr. Simons, That Messrs. Charles Davidson, Moses Springer, D.C. McDonald, R. P. Street, Thos. H. Graydon, the mover and seconder, be a committee to draft an amended bill for submission to the Legislature, to consolidate the laws having reference to mutual insurance, and to report to an adjourned meeting, at which all the Mutual Fire Insurance Companies in the Province of Ontario shall have the opportunity of being represented.

Moved by J. B. Bickell, seconded by C. M. Taylor, That the foregoing Committee be requested to send a copy of the proposed act, as adopted by them, to each Mutual Insurance Company in the Province of Ontario, at least six weeks before the next meeting of the representatives of the different insurance companies, to enable the Board of Directors of each company to pass their judgment thereon.

Moved by C. M. Taylor, seconded by Mr. Bickell, That Messrs. R. P. Street, W. R. Vining, C. E. Chadwick, the mover and seconder, be a committee to report on the propriety of adopting a uniform tariff of rates in connection with the question of re-assurance for purely farm Mutuals.

Moved by Mr. Simons, seconded by Mr. Graydon, That Messrs. Moses Springer, S. Thompson, Chas. Davidson, the mover and seconder, be a committee to consider the question of re-insurance, in connection with a uniform tariff of rates in mixed companies.

The Convention adjourned till 3 o'clock, p.m., to enable the foregoing committees to report.

The Convention met as per adjournment, when the committee appointed to report in regard to purely Farmer's Mutuals, presented the following report, which, on the motion of Mr. Street, seconded by Mr. Graydon, was received :

The committee appointed to consider a uniform tariff of rates with a view to the question of re-insurance, beg leave to report : Your Committee recommend that the Mutual Farm Insurance Companies should agree to adopt the following scale of rates :—Premium note system, 1st class isolated dwellings, 1 ; 2nd class isolated dwellings, 1¼ ; 3rd barns, outbuildings and stables, 1½ ; with a uniform cash payment of one-sixth of the premium note.

And on the cash system :—A payment of six tenths of what the premium note would amount to.

And in scale of distances :—That 80 feet shall be considered isolation ; that under 80 feet and over 60, the rates shall be, on 1st, 2nd and 3rd class—1¼, 1½, and 1¾, respectively ; under 60 and over 40 feet, 1½, 1¾, and 2. That your Committee recommend the adoption of the above rates as a basis upon which to effect re-insurance with other companies. All of which is respectfully submitted. RICHARD P. STREET, Chairman.

On motion being made, the representatives of mixed Companies were added to the above Committee, and a resolution passed appointing the next meeting of the Convention to be held in Hamilton. Resolutions were passed expressing the opinion that the insurance of more than two-thirds of the actual cash value of either buildings or contents is opposed to the interests of Mutual Insurance Companies ; that unity of action in the matter of offering a liberal reward by Mutual Insurance Companies, for the conviction of incendaries, is highly desirable, and that this subject be specially referred to at the next meeting of the Convention. That a multiple of four of the tariff of the Associated Proprietary Companies, form the basis of the Premium Note System for a three-years' insurance of Mutual Companies doing business. This rule to apply to all risks except isolated private dwellings and farm properties ; that one-fifth of the premium note rate be the cash premium for re-insurance for one year.

That a multiple of four of the lowest rates of Proprietary Companies be the premium note rate on isolated private dwellings, and that isolation for first-class buildings be 66 feet; second-class 80 feet ; and third-class 120 feet; and further, that one-fourth of the premium note rate be the cash premium for one year's insurance. That each Mutual Fire Insurance Company do supply each other with copies of policies, applications, and instructions to agents, when so requested, with a view to the assimilation of the conditions of insurance. The Convention meet again at the call of the chairman.—Condensed from *Hamilton Times.*

FIRE RECORD.—Bowmanville, April 30.—A fire broke out this morning in the brick block occupied by the Royal Canadian Bank, McCullough & Co., dry goods, and Joseph Jeffery, tailor. By the exertions of the fire company and citizens, the fire was confined to the part of the building where it was first discovered. The principal sufferer is Mr Jeffery, who has lost all the furniture in the third story. The building is badly injured. McCullough & Co's goods were slightly injured by removal.

Brantford, April 30.—Mr. Ott's tannery was destroyed by fire last night. The Loss amounts to about $2,000 ; insured for $1,500. Cause of fire unknown.

Blenheim, Ont., April 18.—Mr. Morris' pe-

mises, and Mr. Osborne's Cabinet Shop, and principle contents were destroyed by fire, loss $600, insured for $300. Joseph McMichael lived above Osborne's Shop, and lost a considerable quantity of furniture.

Halifax, April 16.—Fire broke out in a building on Salter Street, south end of Granville Street, belonging to the Esson estate, and occupied by Dennis Carroll, as a forage barn. The building, with a large quantity hay, was almost wholly destroyed.

Southold, County Elgin, Ont., April 16.—A fire in the premises of John McLay, destroyed the dwelling house and the greater part of its contents; but a trifling portion of the furniture being saved owing to the rapid progress of the flames, and the absence of almost any assistance, The house and barns were insured, but the principal weight of the insurance was on the the barns.

Thorold, April 25.—Birbeck's House sustained some injury and the furniture was destroyed though the fire was soon extinguished; covered by insurance.

Aylmer, Ont., April, 24.—The *Times* says, that a fire at the village of Hull destroyed the Wright homestead, no insurance; cause unknown.

Georgetown, Ont., April 25.—House of one Johnston, entirely consumed; furniture saved, the fire is attributed to a defective stove-pipe.

Toronto, April 25.—The "Gloucester House," on Yonge Street, was gutted; most of the furniture was saved; insured in the Western for $2000 Beckett's stables also on Yonge Street, were consumed with four horses and a quantity of hay.

Chatham, Ont., April 30,—Great Western Railway freight house, with several car loads of produce. Robert Lowe and George Stringer are the principal losers. The loss is stated by Mr. Swinyard, manager of the Railway, at $9,000 and fully insured. The fire is thought to be the work of an incendiary and one arrest was made.

Rothesay, Ont., April.—Store and dwelling of of Mr. Stull. There was an insurance of $400 in the Waterloo Mutual. The stock was estimated at $2,500, on which there was an insurance of $1,500 in the Provincial.

A Correspondent in Halifax sends us the following list of fires in Nova Scotia:—

Halifax, N. S., April 16th.—Barn, owned by estate late John Esson, Salter Street, Halifax; total loss; insured with the Acadia (local) Company, for $400.

Cornwallis, N. S., April 17th.—Dwelling house at Cornwallis, King's County, owned by Henry Lovett, and occupied by him. Partial loss of $400; Insured for $1,200 with the "Ætna" of Hartford.

Riversdale, N. S., April 20th.—Spool Factory, at Riversdale, Pictou County; in operation for two months only. Building and machinery total loss; Insured for $10,000 with the "Liverpool and London, and Globe." which, however, will not cover the loss estimated by the proprietors.

Halifax, N. S., April 24th.—Union Engine Company's Hall, Grand Parade, Halifax; partial loss of $400. Insured with the Liverpool and London and Globe Insurance Company.

Greenwood, May 3.—House of Ira B. Carpenter, on lot 3, 3rd concession, Pickering; the house, and nearly all the furniture were burned.

Greenwood, May 4.—The steam planing mill and sash factory at Whitevale, was totally destroyed by fire. The building was owned by T. P. White, reeve of Pickering, and occupied by Gilchrist & Co., who lost all their new and valuable machinery. The fire is supposed to have originated by a spark from the engine. Loss estimated to be $5,000; no insurance.

St. Catherines May 3.—The barns and stables of the "Pickwick House" with three horses and a cow were burnt; one, a valuable animal, the property of Mr. John McCurrie. Several carriages, sleighs, and harness were also destroyed. This fire is supposed to be the work of an incendiary.

Kincardine, May 4.—The barn of Mrs. McPherson, tavernkeeper, at Amberly, containing six tons of hay, a quantity of oats and wheat, two cows, a number of farming implements, and about a hundred dollars worth of fruit trees, was totally destroyed by fire yesterday evening; loss about five hundred dollars; no insurance; supposed to have taken fire from the pipe of an intoxicated man, who had been smoking on the premises.

Toronto Fire Limits.—The limits within which rough-casted frame shanties may be erected with shingles laid in mortar, are as follows:—Commencing at the junction of Yonge and Queen streets, and running in a line 120 feet north of the north side of the latter street (so as to include outbuildings) to East William street; thence south to Adelaide street, and so on, including those intervening blocks, back to Yonge street. The limits are also extended up Terauley street to Edward street, and thence to Yonge street, including those blocks also.

—Mr. William Henderson has been appointed Inspector of the Provincial Insurance Company, *vice* Turnbull, resigned.

—Mr. Daniel L. Sills has been dismissed from the Ontario agency of the Connecticut Mutual Life of Hartford.

ARSON AS A RESULT OF FIRE INSURANCE MISMANAGEMENT.

Fire-Marshal Brackett the other day expressed in a public Court an opinion which all familiar with the methods of acquiring fire insurance business will indorse. Referring to a case of alleged arson, he complained—the reporters tell us—"about the careless manner in which policies are granted at the instance of insurance agents," contending that "their general manner of transacting business is simply paying a premium on arson, and multiplying this heinous crime more rapidly then justice can overtake it."

The statement, strong as it is, does not admit of doubt. The excessive competition in fire insurance has developed a recklessness which at once demoralizes the community and imperlis the solvency of the companies concerned. The rule seems to be to get business at any cost—to get it, in fact, with little regard for the conditions that are essential not only to its profitableness, but to its safety. Risks are taken which no prudent company should assume, and in a manner which seems designed to encourage fraud. There is little scrutiny into the value of the property to be insured, and still less into the character of its professed owners. No systematic supervision is exercised after insurance, to hold in check the plans of schemers, and exact compliance with the conditions on which the policies are based. The consequence is that knaves are enabled to obtain insurances for amounts greatly exceeding the worth of the property, and thus to render arson more profitable than trade.

The almost absolute impunity with which the crime is perpetrated doubtless contributes much to its spread. The first duty of a company upon which a claim is made is to investigate the circumstances in which it originates—to ascertain that the precautionary requirements of the policy have been fulfilled, that the property alleged to have been destroyed was actually there to the amount claimed, and that the cause of the fire was beyond the control of the claimant. If careful inquiry reveal the fact of falsehood or fraud in any of these respects, the company is equally bound to withhold payment, and, where willful destruction is apparent or even probable, to prosecute the supposed offender. A firm regard for these twin "duties" is incumbent upon companies, as well with a view to the protection of their own interests as from a proper regard for the welfare of the community.

Competition pushed to an extreme has, however, produced quite a different method of dealing with claims. Instead of being carefully investigated, they are promptly paid. The companies are eager only for business, and to acquire if they boast that they never dispute the claims of the insured. This doctrine of indisputability, proper in its place, is made the pretext for virtual connivance with incendiarism and fraud. There is no scrutiny, because *that* involves delay, and delay in settling alleged losses injures the chance of a company in the race for business. The reputation aimed at is that of a company which pays at once the amount of its policies, whether the fire be willful or accidental in its nature. Arson, therefore, has become a safe crime, so far as the companies are concerned; the latter prefering to submit to robbery rather than incur the name of being strict and suspicious in the adjustment of their affairs.

The laxity is as fatal to the prosperity of the companies as it is criminal in its relations to the public. But there will be little hope of reform until bad management culminate in a collapse. Nothing less than that seems likely to arouse Boards of Directors to the folly and wrong of a system which sacrifices all considerations of prudence and duty to the desire for an increase of business.—*New York Times.*

Mining.

NOVA SCOTIA GOLD FIELDS.

(Advance Notes from the N. S. Mining Gazette.)

Halifax, N. S., April 27, 1869.

The past fortnight was so wet and unsettled that little progress has been made in surface explorations. The snow in the woods is still several feet deep, and is later disappearing than in previous years. There is an absence of all excitement, and most claims now taken up have been acquired in bona fide working. With the exception of Uniacke, reports are meagre, but decidedly encouraging.

Wine Harbor.—The prospects of the Gold Company continue good. Work on the Napier mine is progressing satisfactorily. A new gold streak has been discovered on the Provincial Company's property. The best crushing from the Eureka mine produced a little over one ounce to the ton, the yield being 18 ozs. 18 dwts. 11 grs. Report from the Eldorado Co. not received.

Sherbrooke.—The Dominion Co's. mill is now working night and day. The shaft has been emptied of water, and no further stoppages are anticipated. The Wellington will send up about 300 ozs. as this month's product. Other companies not heard from.

Tangier.—The Strawberry Hill mine has sent 127 ozs. to town; the result of March crushing. The Nova Scotia, a mine favorably noticed by Professor Silliman some years ago, after lying fallow since 1864, is to be worked again under Canadian auspices. The return from the district augur well for the success of further enterprize.

Oldham.—The reports from this district are very encouraging. Several old shafts are being baled with a view of resuming work, and the mill returns still shew a steady high yield.

Ophir.—Several prospectors have begun work. The Ophir Co. are still fortunate and intend to keep up the reputation of the district.

Uniacke.—Some very good crushing reported from this field. The Central Co. obtain over two ounces per ton from last parcel of quartz. Five tons from the Union Co's. shaft, gave twenty ounces, hard amalgam, which had not been reported when our informant left, but was estimated to yield, at least, twelve ounces of gold. The Uniacke Co. expect 120 ozs., to their months product. The Montreal Co. have been exploring, and discovered a belt of quartz and slate sixteen feet wide, which can be mined for less than a dollar. Any returns over three dollars will be profit. The Queen Co., discouraged at the falling off of returns let a shaft on tribute, and on Saturday, the 24th

just before leaving off for the day, a last shot brought out a piece of quartz weighing twenty-six ounces, twelve ounces of which were pure gold, this was at seven feet from the suffice. Tenders are out for sinking on the Toronto Co's. shaft.

MUSQUODOBOIT.—Mr. Hyde has now one hundred men at work, including all who are at the mine and engaged on the tramway, which he is having built. The results from his mill have not transpired. Mr. Burkner brought up about 50 ounces as the first yield from his mill, and the lode which he is working has widened out to five and a half feet, and still shows much shotty gold on the face. The average yield from last crushing of two and a half feet of vein stuff was fifteen penny-weights per ton.

COAL MINES.—We regret to learn that the fire in the Foord Pit, Albion Mines, is likely to prove a more serious affair than was one time anticipated. On Wednesday evening last, several explosions occurred, since which time we have not learned any further particulars.—*Eastern Chronicle*, 3rd *April*.

—The fibrous mineral, asbestos, has often been spoken of as a substitute for rags, but as the supply of asbestos was uncertain, no practical use has been made of the knowledge. The Montreal *Herald* believes there are several deposits of asbestos in Canada, particularly in the eastern townships, and these will, no doubt receive attention as the demond for their mineral increases. A mine of asbestos, which has a long fibre, and quite eqaal to the Italian, exists on the property of the Slate Company at Melbourne, and is being worked by parties in New York.

Financial.

TORONTO STOCK MARKET.

(Reported by Pellatt & Osler, Brokers.)

With the exception of Bank of Montreal, which has advaneed 6 per cent., stocks generally close weaker, and in some cases show a considerable decline.

Bank Stock.—Montreal has advanced, owing to the declaration of a 6 per cent. dividend, and there are now buyers at 152, and no sellers. No sales of British. Ontario firm at 101½. Toronto has declined since our last report, the latest sales being at 118½. Royal Canadian.—In consequence of certain circulars issued in reference to this Bank the stock rapidly declined, but there are now buyers at over 60. Commeree is rather heavy at 102½, with buyers at 102. Gore has again declined, sales having taken place at 36½. Transactions in Merchants' occurred at 107 and 107½, closing heavy at the latter rate. Quebec continues in firm demand at 102 to 102½. Sales of Molson's are reported at 109, which rate is still procureable. Sales of City were made at 101 to 102, but the stock declined to 101½, with no buyers over par. Du Peuple is in fair demand at 108; little offering. The latest sales of Jacques Cartier were at 109; little offering. Mechanics—Very little offering; buyers and sellers a part. Other banks nominal.

Debentures.—No Canada five or six per cents. in the market. Dominion stock has been sold at 107½; holders now demanding 108½ to 109. Toronto bonds having ten years to run offering at rates to pay a little over 6¾ per cent. No County offering; they would command high rates.

Sundries.—There are limited sales of City Gas at 107 to 107½. There are buyers of British American Assurance at 56. Small sales of Canada Permanent Building Society were made at 125½, at which rate there are buyers. Western Canada B. S. is offered at 121, with buyers to a limited extent at 120½. Freehold B. S. sold at 112½, at which rate there are buyers. Holders ask 134 for Montreal Telegraph, with no buyers over 133. Mortgages have been freely placed to pay 8 to 10 per cent. Money tight; commercial paper commands high rates.

THE ROYAL CANADIAN BANK.

Some correspondence has taken place with reference to the affairs of this bank. Hon. Donald McDonald, in a circular issued by him from Ottawa, alleges that the advances by the Bank to Brown and Chewett were characterized by recklessness; that he was ignorant of the transactions, though a member of the Board; that the original agreement with Brown was entered into by A. M. Smith, on his own responsibility, without consulting the Board, and even without reporting it, and that the final loan of money to be used in gold speculation was, in the same manner, granted by Mr. Smith, on his individual authority; that the Board has been kept uninformed of all important business despite Mr. McDonald's repeated protests, and the President has assumed absolute authority; that the system has worked badly, as shown by the losses at Agencies; that the influence of Mr. Smith caused the Cobourg agent, Mr. Wallace, [whose appointment he, Mr. McDonald remonstrated against] to be reinstated, after suspension by the Cashier, and thereby caused the total loss of the amounts the Agent had improvidently advanced; that when the accounts of the Seaforth Agency, under Mr. Russell, (whose dismissal he, Mr. McDonald, proposed) became unsatisfactory, Mr. Smith interfered to give time to Mr. Russell to close his accounts, which extension enabled him to go on with the irregularities which led to his absconding; that the losses of the Kingston Agency occurred on credits of which the Board had not been informed; that Agents were allowed, on their own responsibility, to make advances to persons of doubtful credit, and to engage in transactions which proper supervision would have rendered impossible; that the Bank itself has made advances, without exacting adequate security, the President alone being the judge; that the monthly returns to Government, which are prepared under the direction of the President, have been so manipulated as to conceal losses and debts known to be bad have been included among available assets. He concludes that although the position of the Bank is such as to enable it to meet all obligations, to keep the public safe, to provide amply for all claims, yet the Shareholders have need to act promptly to protect their interests.

Mr. A. M. Smith, in reply, asserts that Mr. McDonald was advised and knew of Browne's transactions and arrangements with the Bank, as well as of other transactions of which he claims to be ignorant, and this can be attested on oath by an officer of the Bank; that the books showing the daily discounts, and past due bills, were at all times open to inspection of the Board, and lay on the table at the weekly meetings; that Mr. McDonald never remonstrated, as he alleges, against the appointment of Mr. Wallace; that Mr. W's. suspension was at Mr. Smith's instance, and his dismissal would have followed had it not been for the fear of jeapordizing large amounts; that the general management and correspondence with the Agencies was conducted by the Cashier, and seldom came under Mr. Smith's notice; that the statements and insinuations respecting Mr. Smith's connection with the Seaforth Agency, and his action at the Board with reference thereto are pure fabrications; that Mr. Smith had no more connection with the affairs of the Kingston Agency than Mr. McDonald had; that, as is well known, Mr. McDonald is anxious to occupy the position of President, and the first cause of his discontent was that he was not elected last July, on which occasion he received his own vote only. Mr. Smith says:

"It is no doubt known to many of the stockholders, but perhaps not to all, that Mr. McDonald is at times engaged in speculations not only hazardous, but which require manipulating in a rather questionable way, as the following fact will show: he applied on the 29th January last, to the President and Cashier for a loan of one hundred thousand dollars (*say nearly one-tenth*) of the paid up capital of the Bank, saying, however, that he wished it kept from the knowledge of Mr. Smith; and actually proposed to another member of the Board to assist him in holding a meeting with the President, to be called specially for the purpose of granting the loan of the above sum with the cognizance of the other members of the Board. When they refused, he made a formal application in writing for that amount, which came before the Board at it next sitting, at which there were present the President, Mr. McDonald, and another besides himself, four in all; he there pressed the loan, and I was forced to have recourse to a clause in the by-laws, which prohibits the discount of a note, if objected to by one member of the Board present; he, Mr McD. insisting all the time that the clause in the by-laws, refering to the discount of a note, did not apply to a foreign credit, which was what he wanted. When this *ruse* failed him, a special meeting of the Board, called for the purpose, finally disposed of the matter by unanimously refusing the credit, which he wanted for the purpose of investing in one of the most dangerous enterprises in the United States which has already ruined some four or five contractors. Let Mr. McDonald contradict the above if he dare—let him show the stockholders that he could have met the loss had his contract failed, and then convince them that I would have been justified in permitting the investment of the funds of the Bank in such a mad speculation in a foreign country. Since then it has come to my knowledge that this Mr. McDonald has been endeavouring to intimidate the President, Cashier and other members of the Board, by threats of sending a circular to the stockholders, unless they would comply with an improper demand, which he said in presence of the Board, that unless he got what he wanted, he would issue the circular when he went to Ottawa, as he could then save the postage by franking them."

As regards the Brown affair, Mr. Smith says: "It is true that during the absence of the Cashier from the city, I authorized a credit not to exceed $25,000 to Mr. Brown, after satisfying myself by an examination of his books, and a special report obtained from the Commercial Agency, of his standing and responsibility for that amount; which arrangement continued for more than a year with satisfaction and profit to the Bank. Finding then that Mr. Brown was endeavoring to overstep his understood limits, I suspended the arrangement until he gave Mr. Chewett's note for $25,000, which fully covered his indebtedness at the time; and he having thus placed the account in a position which was considered safe and satisfactory, I never again interfered with it while President. By a reference to a report of Mr. Chewett's examination in bankruptcy, you will see that the gold transactions referred to by by Mr. McDonald, which resulted so disastrously to that firm, were not engaged in till after I had ceased to be President."

The following Directors, Messrs. Metcalfe, Barber, Harman, Manning, Crombie and Smith, have also replied jointly to Mr. McDonald. They allege that a short time since he made a proposal to the Board, which they felt bound unanimously to decline, and from that time a change was observed in Mr. McDonald's conduct; that he next endeavored, "under threat of issuing a circular of some kind, such as he has issued, to gain a personal advantage, coupled with a promise that if his offer was accepted his lips would be sealed;" that the endeavor was not successful, and hence the circular; that the appointment of Mr. Wallace was not made against Mr. McDonald's remonstrance, as he was not present at the meeting at which Mr. Wallace was appointed, nor at any of the ten preceding meetings, and he did not enter his protest against the appointment; that Mr. McDonald did not propose the dismissal of Mr. Russell, and what was done was done by the unanimous vote of the Board; that the Cashier was the first to direct attention to the irregularities at the Kingston agency; that the Board was not divided, with a majority against the measures

of the late President, and there was no such division; that it is not correct that the returns to Government have been so manipulated as to conceal losses; that these returns have been prepared by the proper officers of the Bank, and are correct; that full inquiry is courted by the Directors into all matters connected with the management of the Bank.

STATEMENT of the Dominion Notes in circulation, Wednesday, the 7th day of April, 1869, and of the Specie held against them at Montreal, Toronto and Halifax, according to the returns of the Commissioners under the Dominion Note Act:—

Dominion Notes in circulation—	
Payable at Montreal	$2,597,037
Payable at Toronto*	947,963
Payable at Halifax †	340,000
	$3,885,000
Specie held—	
At Montreal	450,000
At Toronto	400,000
At Halifax	68,000
	$918,000
Debentures held by the Receiver General under the Dominion Note Act	$3,000,000

* Including $190,000, marked St. John.

† The Nova Scotia dollar not being equal in value to that of the other Provinces, the notes issued at Halifax are worth their face value in Nova Scotia only. They are stamped "Payable at Halifax," and are numbered in black ink. None but $5 notes are yet in circulation.

BANKER'S ALMANAC.—The second edition of "The Merchants' and Bankers' Almanac," for 1868, has been issued, containing the history of 850 insurance companies and their officers; also a list of 1,650 National Banks; 300 State Banks; 1,400 Private Bankers in the United States; Banks and Bankers in Canada; 1,200 Bankers and Brokers in New York City, including names of members of the New York Stock Exchange, the Open Board of Brokers, the Gold Board and the Mining Board, Annual Repsrts of 1868 on Banks, Coinage, and Ninety Staple Articles; Capital, Circulation and Profits of each Bank in New York City. List of Banks and Bankers in England, Scotland, Ireland, Europe, &c.; Deposits in each. Summary view of the Annual Production of Gold and Silver throughout the world. The monthly prices for forty years at New York of the following sixteen articles: Bar Iron, Steel Iron, Pig Iron, Pig Copper, Anthracite Coal, Coffee, Cotton, Wool, Wheat, Rye, Corn, Oats, Hops, Molasses, Sugar, Pork. The Grain products (quantity, acreage and value) of every State in the Union—Corn, Wheat, Rye, Oats, Barley, Buckwheat, Potatoes, Hay and Tobacco—Years 1856, 1866. Also the monthly prices of Ninety Staple Articles at New York—1868. The daily price of Gold at New York, 1862 to 1868. Alphabetical List of 2,000 Cashiers; and Engravings of New Bank Buildings.

STOCK SALE AT HALIFAX.—At W. Myers Gray's stock sale, April 23, the following prices were realized: Five shares in the Bank of British North America, £70; 8 do. £70 2s. 6d; twenty-five shares in the People's Bank, $27.75; 1 share in the Halifax library, $11; 20 shares Bank of Nova Scotia, £66 15s.; 1 share Salt Company, 39 cents; 2 shares Union Marine Insurance Company, £21.

—Counterfeit $5 notes of the Bank of New Brunswick are in circulation.

—A St. John paper says: The Merchants' Bank is about to establish a branch in Chatham, and Mr. King, Manager of the Bank of Montreal, is pretty sure to establish a branch of his bank at Newcastle.

ST. JOHN BUILDING SOCIETY.—A balance sheet of liabilities and assets of the Society are as follows:

Dr. December 31, 1868.	
To depositors	$53,990 11
To stock, cash	60,369 97
To accumulating interest	71,027 91
Sundries	575 52
	$185,963 51
Cr.	
By advances to members, secured by 204 mortgages	$179,087 03
By contingent account	6,026 20
By sundries	850 28
	$185,963 51

The operations of the Society are based on 1,303¾ shares, viz: 591 monthly investing, and 165¼ paid up shares, and 547¼ advanced shares, the whole representing a subscribed capital of $260,750. The amount now held on deposit is $53,990, against $41,726 on 1st January last year.

—A special meeting of the stockholders of La Banque Jacques Cartier is called for the 14th June, to take into consideration a proposition to dismiss the President, the Hon. J. L. Beandry, on account of neglect to fulfil his duties, having neglected to attend the meetings of the bank since the 19th Dec., 1868.

Railway News.

GREAT WESTERN RAILWAY.—Traffic for week ending April 16, 1869.

Law Report.

IN CHANCERY.—*In re. Etna Insurance Co. of Dublin.*—Mr. T. H. Spencer presented a petition on behalf of the creditors of the company, praying that the Government may be ordered to pay into Court the moneys shown to have been deposited with them by the company under the statute 24 Vic., chap. 33, and that said moneys be distributed among the creditors of the company. S. H. Strong Q. C., and J. Bain for the Minister of Justice, showed that the money has been forfeited to the Government under the statute, and contend that the creditors are not entitled to the benefit of the deposit. They also contend that the Court has no jurisdiction to make such an order. Stands for petitioner to show more clearly the existence of such a fund, and the condition in which it now stands. V. C. Sprague expressing a doubt whether he could under any circumstance make the order sought for as against the Government.

MARKLE *vs.* NIAGARA DISTRICT MUTUAL INSURANCE CO.—This action, which was tried at the Lincoln Assizes, was brought by Mr. W. Markle, of Listowel, to recover $800 dollars, the amount of an insurance policy on his tavern in Listowel, which was destroyed by fire in October, 1867. The claim was resisted on the plea that when the insurance was effected there was a mortgage on the property of $500, which the plaintiff failed t notify the Company of. Verdict for plaintiff $800, and $56 interest.

RUSS VS. CLINTON MUTUAL INSURANCE COMPANY.—This was an action at the present Toront Assizes, on a policy of insurance effected with th Mutual Fire Insurance Company, at Clinton, an brought to recover the sum of $900, being th amount of the plaintiff's claim for loss in conse quence of the premises insured being destroyed b fire on the 20th of March 1868. Defendants firs plea denied the making of the policy; Second fraud; Third, that at the time of effecting the in surance, the premises were mortgaged to one W W. Ketchen; Fourth, that after effecting th insurance, plaintiff mortgaged the property; Fifth a plea in bar denying the plaintiff's interest in th property insured. Defendants abandoned the first and second pleas, and went to the jury o the others. Verdict for the plaintiff, $940 50.

—At the St. Catharines Assizes the case of th Niagara Falls Suspension Bridge Company vs Gardener, came up on the 5th inst. This was a action brought to test the question whether th Suspension Bridge at Clifton is real estate or pe sonal property, and whether it can be assessed a ordinary property in the corporate limits. Judg Price, of Welland, has already given two decisio on the subject; but it is contended that his de cisions are not final. No jury was called in thi case, and Mr. J. H. Cameron said it was hi opinion that the new law would lead to difficult yet. For instance, when his Lordship was Judg and and jury, he should like to know the remed if the jury was misdirected. A verdict of $10 wa entered for the plaintiff, with leave to defendan to enter a non-suit, or a verdict for defendant

THURSDAY, MAY 6, 1869.

THE ROYAL CANADIAN BANK.

The evil of placing a mere speculator on a Board of Bank Directors was never more fully illustrated than in the case of the Hon. Donald McDonald, whose "private and confidential" circulars to the stockholders of the Royal Canadian Bank have provoked rejoinders equally "private and confidential" from Mr. A. M. Smith, the late President, and from the Directors themselves. By some means these "private and confidential" circulars have found their way into the newspapers, and the public have been regaled with their perusal. Mr. McDonald is a Senator, and availing himself of his privileges as such, has put the country to the expense of circulating his circularized grievances. We deem this stage-saving operation of Mr. McDonald's worthy of notice, in connection with his attempt to win the sympathy and assistance of his fellow shareholders in the Royal Canadian, by his seemingly patriotic effort to render them a service. The record of a public benefactor should be stainless, if he wish to command attention and gratitude: so this simple evasion of postage is sufficient to throw doubt on Mr. McDonald's sincerity. But when we find that his alleged facts sink into airy nothings before contradiction and disproof, we begin to doubt his honesty. When we find still further, that this would-be reformer of abuses threatened his fellow directors with dreadful revelations, in case they refused to grant him what the directors call "a personal advantage," and promised that "his lips would be sealed" if his proposals were acquiesced in, we cannot help concluding that this Senator is the compeer of the sender of threatening letters, and that his words are wholly unworthy of credence. A step further brings us face to face with a piece of impudence so brazen and cool, that we are lost in amazement at the audacity of the man who could have perpetrated it. According to Mr. A. M. Smith, a gentleman whose veracity none would dare to question, the Hon. Donald McDonald applied to the President and Cashier of the Royal Canadian Bank, on 29th January last, for a loan of nearly one-tenth of the paid up capital of the bank. Verily, Senator McDonald is a nice man to have on a bank Board! If Mr. Smith's statement is true, it is high time that an extraordinary meeting of shareholders were held, and such proceedings taken as would ensure Mr. McDonald's expulsion from the Board. Even supposing that Mr. McDonald were not a director, not a speculator, and were good for any amount, we all know that large loans have been the ruin of such of our banks as have failed, and that the managers of our banks must and should avoid them. Mr. McDonald quarrels with the bank management, but he would have had the directors do what every bank manager, aye, every bank clerk here, knows to be the worst possible thing for a bank with limited means. He condemns Mr. Smith for assisting Mr. Brown in his gold speculations in New York, yet he would have forced the bank to lend himself a large amount, to enable him to engage in dangerous enterprises in the States!

The shareholders of the Royal Canadian have, of course, by this time been placed in possession of the charges and the replies. If there is one lesson more important than another to be learned from their perusal, it is that the election of a man such as Mr. McDonald would appear, from the evidence, to be,—one whose speculations are incessant, leading to a constant demand for large sums of money—one who is always tempted to make use of his position to his own advantage pecuniarily—one whose associations are with either the needy or the speculator—is fraught with the greatest danger to their interests. If they believe that the statements of Mr. Smith and the directors are correct, it is a duty they owe to themselves, to the other banks, and to the public, to free the Board of his presence. Such an one must shake confidence in the management, for if one director could obtain by way of loan, one-tenth of the bank's capital, what reason would there be against assuming that the other directors could not secure the remaining nine-tenths. A Board of Bank Directors should be individually and collectively above suspicion, and when one is found recreant to his trust, a public example should be made of him. Now or never. If what Mr. Smith and the Directors say is true, Mr. McDonald is not fit to be trusted on the Board; on the other hand, if Mr. McDonald's assertions are true, the whole management should be changed. It has come to this that a choice must be made or public confidence will be lost to the institution. We are glad, for the sake of the Royal Canadian, that the worst is now known, and it will be for the Shareholders, by prompt action, to convince the public that a Director cannot remain as their trustee and act the part which Mr. Senator McDonald has been so directly charged with.

THE CANADIAN CANALS.

I.

We see by the journals, that proceedings have been taken in Parliament, with regard to the Ottawa navigation scheme. It may briefly be stated that those who are interested in this project, or we may say who advocate its necessity, have petitioned the Dominion Government for aid. An issue is therefore raised, and we are very glad of it. It is in every way desirable that such should be the case; and there can now be no means of evading the decision, whether the St. Lawrence is to be the line of communication or not; and whether the St. Lawrence route shall be developed to its full capacity.

No one could blame us if we assumed the standing point of arguing from local considerations. We could say—look to the results of Confederation. In Eastern Canada a line of railway is placed under contract, to cost a very large sum of money,—we will not be precise, but some millions of dollars—the creation of which is not demanded by a solitary commercial necessity. Even the political uses are not self-apparent; for, from all we can learn, in summer, the travel incident to parliament will, in Nova Scotia, turn to Halifax, and pass by boat to Portland or Boston, and thence follow the nearest railway route to Ottawa. While, in New Brunswick, the movement will turn to St. John, or by the Maine railway connections with the Grand

Trunk. In winter, it is somewhat hard to say what will be the fate of the northern portion of the line. If it be subjected to such management, and to such results as marked the Grand Trunk last winter, the inference is that it will experience the fate of the Riviere du Loup and the Three Rivers branch. After a couple of months of winter, it will become impassable, and the snow will rest upon it in peace. While this extraordinary expenditure is the great feature to the east of the Dominion, we have the Ottawa route, hanging over central and north-western Canada. Ontario might well enquire, what counterbalancing benefit was to be extended to her population. We might here diverge from the main question, and inquire from what population the Dominion revenue is principally raised, and leave the sister Province of Quebec to tell us what sum the inhabitants of that part of the Dominion contribute. We would then be in a position to claim some equivalent, some equipoise, some sectional expenditure, by which the interests of Western Canada should be advanced. We say that with justice and with propriety this line of argument could be taken. It is not, however, our intention to follow it. We will examine the scheme of this Ottawa Canal, purely on its merits, and on the results promised, we were nearly writing threatened, because once upon a time, there was much vigor shewn in its advocacy.

The Ottawa has an ill name for experiments and blunders. One of the great arguments for placing the seat of government there, used to be, the admirable fortifications which could be placed on Citadel Hill, the site of the present parliament buildings, to defend the city from—the river, a stream unapproachable, except through the Rideau Canal, and through the narrow canals to the east. It is here that that gigantic blunder, the Rideau Canal, was perpetrated. An expense incurred by the Imperial Government, it is true, but which never gained the most shadowy result, except dissatisfaction. It is supposed to have cost five millions of dollars. But even its narrow limit was made unavailable by the extraordinary proceeding of building three locks on the Grenville Canal, 106 ft. x 19 ft.—while the remaining locks would a lmit a boat passing through 127 ft. by 32 ft., drawing 5 feet of water. It is here that the Ottawa members sold their support for the commencement of the memorable Chats Canal, given out as a political job, at prices wholly below the value, and which still stands a monument of executive folly, unfinished and useless. Indeed, that it is unfinished is a mark of wisdom, for it would have been valueless; that it is useless, is proved by this Ottawa scheme, which is again claiming the privilege to swallow up about twenty-five million of dollars.

We do not wish to write flippantly on this subject, for its importance cannot be overrated. It has always been the case with Canada, that the country has been without a canal policy. Our system, such as it is, is an adaptation of isolated efforts of men who saw a good operation, and so advocated a certain improvement. Thus the necessity of the Lachine Canal was seen a few years after the Conquest, and the design was fostered by the Imperial Government, which, with the persistent kindness which has marked the course of the Mother Country to this Province contributed to its construction. The Cornwall Canal may be considered a more legitimate operation ; for it was the work of the Upper Canada Legislature, under commissioners who performed their work in a careful manner. It is true the engineering work of this canal is as bad as it can be, but that was not the fault of the non-professional men. It was not possible to force Lower Canada to construct the Beauharnois Canal ; and it was not until the Union that that indispensable link in the navigation was made. In the extreme west, the Welland Canal was seized by a knot of men, and the result of their mismanagement, and their desire to enrich themselves, has cost the country a serious sum. Even off the main route, we have the several projects dictated by private ends, more than by public advantage. There is what is known as the Trent Navigation ; and we have at our own door the Georgian Bay Canal. The proprietors of this scheme are also applicants for aid. Possibly they may urge that it would be a just counterpoise to subsidise that scheme, and the Ottawa route together ; and that then, justice would be observed, and the various populations equally benefitted.

For our part we do not approach the subject in any local spirit. We wish simply to examine the results which are claimed for the route, and we set entirely out of sight everything else. We will even cease to inquire if anything better can be done. We will take the project as we find it, and we will accept the arguments offered by its advocates. What there is to be gained by spending twenty millions or so by improving the Ottawa navigation? We presume that we need not consider the question of settlement west of Pembroke. It must, indeed, be an enthusiast, who at such a cost wishes to place a few settlers around Lake Nipissing, or send some northern stragglers to Lake Temiscomingue. Some few statistics of the progress of settlement on the eastern shores of Georgian Bay, by the county of Simcoe, will furnish data of what we may expect. We have then but one ground of advocacy—commercia necessity ; a quicker transit for produc between Chicago and Montreal. Nothin seems easier than to establish this argument The map is opened, and the course shown " Look" exclaims the advocate, "See instea "of going south by Lake Huron and passin "through the unpleasant navigation of Lak "St. Clair, and so by Lake Erie and the Wel "land Canal to Lake Ontario and the St " Lawrence, we at once come to the south " the Manitoulin Islands, enter the Frenc "River to Lake Nipissing, and taking th "Mattawan we go directly by the Ottaw " to the Lake Saint Louis, at the foot of th " Beauharnois Canal. We positively sav "368 miles." "Wonderful !" says the li tener. At least one or two generals have sai so ; men, too, who have the reputation of bein good soldiers, and not without sense. Bu what are these 368 miles really worth in time and in controlling the course of trade? It argued that the trip between Chicago an Montreal can be made in 44 hours le time than by the St. Lawrence, and th freights will be reduced in value 37 cents ton. Here is the result, the cost of whiel says Mr. Walter Shanly, who examined th route, will be twenty-five millions of dollar an expense which takes us only to the city Ottawa. That is totally independent of a improvement of the Ottawa, itself and th Grenville and Carillon Canals to Lake Sai Louis. How does the matter now stand ? is conceded that the route by the St. Lawren to Montreal—the most inland Canadian ha bor for sea-going vessels—in comparison wi that by the Erie Canal to New York, is every way pre-eminent ; that the cheapc and slowest by the St. Lawrence is in eve way superior to that by the Erie Canal a the Hudson. The difficulty is not in gettir to Montreal. The difficulty is at Montre For when you bring produce thither you ha no vessels to carry it away to Europe or els where. That is, the vessels are regulated l the imports. So long as these are light, the will be a scarcity of vessels to carry aw large cargoes. Therefore, however much y reduce the cost of river navigation, the qu tion is untouched—we will not say unrem died, for literally nothing is done to be upon it. The comparison may be rough made that between any given point at th West, and Montreal and New York, there a difference in time of ten days in favor of th former, at half the cost. What need then there for any Ottawa Canal, even on th data which those who battle for it pretend advance in its favor? But are we sure th this very advantage is gained ? Does th saving of 368 miles of distance represent saving of time. The Ottawa route is fro Georgian Bay ; a canal route in which y

ock up 83 feet above Lake Huron, and descend 376 feet to the basin at Ottawa city, rom whence the descent to Lake St. Louis is rom 110 to 120 feet. In the St. Lawrence t is open water; and, with the exception of he Welland Canal, and possibly the Lachine anal, the river is kept. It is a route traelled daily, and the distance is passed a known time. On the other hand the eriod required to pass the proposed parallel avigation is a matter of estimate; all that claimed for it is 44 hours. It is quite posible it may not be 4 hours; and yet for this e are asked to spend twenty-five millions of ollars.

AKE SUPERIOR AND RED RIVER RAILWAY AND NAVIGATION COMPANY.

A meeting of influential merchants and hers took place on Saturday last, in oronto, to receive the report of the Comittee appointed to prepare a prospectus for ie Company. The Committee recommended ie construction of a railway from Fort Wilam to Rainy Lake, a distance of about 156 iles, at a cost of $4,000,000, a canal with vo lecks at Fort Francis, at a cost of $2,00-)0, and the purchase of two steamers for ainy Lake and the Lake of the Woods, at 50,000. From the Lake of the Woods to ort Garry, about 95 miles of railway, costing)out $2,000,000, would be the second sec-)n. The capital required would be, there-re, about $6,500,000, and if Government)uld grant 8,000,000 acres of land in alter-ate sections and guarantee the bonds of the)mpany to the extent of $2,500,000, the oject would be a success, and Fort Garry)uld be placed within 40 hours travel of ort William on Lake Superior.

Judging by the names of those who have tered upon the work, we have every conlence that strong pressure could be brought bear upon the Government for the reired assistance, and if there is the slightest sire on the part of the authorities to assist securing for Canada the trade of the vast d River Territory, such assistance could t be refused. Unless something be done, d that immediately too, we shall have ent in vain the $1,500,000 which the Hudn's Bay Company are to get for their supsed rights. The States, with their Pacific ilway, have got the start of us, and we ve now to make up for lost time. Our instment may be made to pay at once, and e sooner our statesmen take the matter in nd the better for us all. If the Dominion overnment will not recognize the obligation promote the interests of the West, it will the duty of the Province of Ontario to ne forward single-handed, and apply its surplus to an undertaking, which will pay this Province, at least, far better than an investment in Dominion stock.

Meeting of Bankers.—On the 1st inst., a meeting of the representatives of various banks took place at Ottawa. Mr. Jack, of Halifax, represented the banks of Nova Scotia, and Mr. Lewin, of St. John, those of New Brunswick. The other representatives were as follows: Mr. Hague, Bank of Toronto; Mr. Stephenson, Quebec; Mr. Dunn, Union; Mr. Sache, Molson's; Mr. McMaster, Bank of Toronto; Messrs. Metcalfe and Woodside, Royal Canadian; Mr. Benson, Niagara District; Mr. Simpson, Ontario. Communications were received from the City and Merchants' Banks, endorsing proposed action by the meeting. Messrs. Lewin, Hague, Stevenson, Gibbs and Simpson were appointed a committee to wait on the Finance Minister in reference to his banking policy.

—We understand that Mr. Heatherington, of Halifax, has decided to resume the publication of his *Mining Gazette*. His connection with this journal as correspondent has, therefore, ceased. It is scarcely necessary to assure our readers that we will still continue to supply them with reliable mining intelligence from the different points of interest. Meantime, we hope that the people of Nova Scotia will show their appreciation of so useful a paper as the *Gazette* in a more substantial manner than they seem to have done hitherto.

The New York Times.—To Canadians, who desire a New York journal of the first rank, we can recommend the *Times*, for its ability and its impartiality. Weekly Times, $2 per annum.; Daily, $12. Address, H. J. Raymond & Co., New York.

Quebec Legislature—The following are some of the acts which passed at the late session of the Legislature of the Province of Quebec;—To incorporate the St. Maurice lumber and land company; the Sherbrooke, Eastern Townships and Kennebec railway company; the St. Francis Valley and Kennebec railway company; to reduce the capital stock of the St. Francis mining and smelting company of the township of Cleveland, Province of Quebec; to incorporate the Montreal Northern colonization railway company; the Maganaeippi River Improvement company; respecting the St. Lawrence Warehouse, Dock, and Wharfage company; to incorporate the Missisquoi Junction Railway Company; to amend the act incorporating the South Eastern countries Junction Railway company; to incorporate the Richelieu, Drummond and Arthabaska counties railway company; to incorporate the St. Francis and Yamaska Rivers Improvement and deepening company; to amend the act to incorporate the Chambly and Hydraulic and manufacturing company; to amend the act 29th Victoria, chapter 17, relating to life assurance; further to amend the acts relating to the Stanstead, Shefford and Chambly railroad company; to repeal the act to incorporate the Canada Marine Insurance Company; to amend act 31 Vic., chapter 32, respecting the Fire Marshals for the cities of Montreal and Quebec, and to change their name of office to that of Fire Commissioner; to incorporate the Levis and Kennebec Railway company; to amend the Joint Stock companies general clauses act; to amend the Joint Stock companies incorporation act; to incorporate the Quebec and Gosford Railway company.

Commercial.

Toronto Market.

The spring trade is now pretty well advanced, or should be, but the amount of business done falls short of what was expected.

Groceries.—The only change, worthy of notice, is in sugars, which are down ½ a cent. They have been gradually falling in New York, and the tendency is still downwards. We give the following particulars respecting the current crop in the Greek Islands: Total crop 1868, 57,500 tons; total crop, 1867, 65,000 tons.

Liquors.—The usual trade has been doing at our quotations. The following is from the London *Wine Trade Review*:—

"The political disturbances in Spain have interfered considerably with the even tenor of the Sherry trade, tending greatly to retard the proper execution of business. At Xerez the state of affairs has been most alarming. The rioters came into collision with the soldiery, resulting in the defeat of the former with considerable loss. Considering the lamentable state of affairs, business has been satisfactorily forwarded, and it is now hoped that a better position will supervene. The consumption in Great Britain has been well maintained, and as a great portion of the last vintage is hardly fit for shipment, prices will probably continue firm. Notwithstanding the supposed downfall of Port, advices from Oporto state that a very satisfactory business is being transacted, especially in the 1867's, which are expected to develope well, and consequently command a considerable amount of attention. A tolerable quantity of 1868 have changed hands; the fine wines of this vintage are expected to develope extraordinary quality, and in the lower descriptions there will probably be selected a fair average of good serviceable wines.

Petroleum.—The Hamilton Carbon Oil Co. are refining about 1,000 brls. per week, by the new process, and about that quantity is being shipped each week to Boston and New York where it brings the price of the best American. The Company are, at present, refining in London, but they expect their works at Hamilton to be in operation in a few days. We hear of a sale of about 21,000 brls. crude, in tank at Petrolia, at the rate of $1.55 per barrel. This was a nice little cash transaction of $32,000. Messrs. Parsons, Bros. are the sellers.

Grain.—*Wheat*—Receipts 1.445 bush. and 1,000 bush last week. Spring has met with a fair demand at 94 to 95c. and sales of lots amounting to about 24,000 bushs. in all were made at these quotations; the market closed steady. Fall is dull and nominal with holders asking $1.00 to $1.05; no demand and no sales reported. *Barley.*—Receipts trifling; the market is nominal at quotations; sale of 800 bushs., at $1.05, bagged: the only business doing is in small lots for seed. *Oats*—Receipts 2,400 bushs. and 500 bushs. last week; The market is firm and higher, with sales of car loads at 54 to 55c. *Peas*—Receipts very light; market quiet; no lots selling; quotations unchanged. *Rye*—nominal, as quoted. *Corn*—is worth about 60c.; sales, 1 car at 60c. on track; 4 cars at 60c. f.o.c. *Seeds*—Timothy closes firm and higher, at $2.50 to $2.75; Clover, $5.50 to $5.75. *Stocks*—The stock of grain in store in Toronto on the 3rd May were; Fall wheat 57,952 bushs., do April 12th, 66,400 bushs.; Spring wheat, May 3rd, 75,033, do April 12th, 97,512 bushs.; Oats, May 3rd, 10,603 bushs., do 12th April, 18,400; Barley, May 3rd, 4,200 bushs., do April 12th, 11,415 bushs; Peas, May 3rd, 24,603 bushs., do April 12th, 30,600 bushs.

Flour.—Receipts 1,777 bbls. and 2,014 bbls. last week. No. 1 Superfine has met with a fair demand and sales of 1,000 bbls. are reported, at $4.05, holders asking $4.10 and higher; about 1,000 bbls., in all, of spring wheat extra, sold during the week at $4.15. Fancy is also in fair demand; 300 bbls. sold at $4.25 free of storage. Extra is nominal at $4.50, no sales during the

week. Superior Extra, none offering. Stock of flour in store on 3rd May, 22,056., and the 12th April 26,012 bbls. The first cargo of flour for the season has cleared for Halifax. *Oatmeal*—is in a good deal better demand; small lots selling at $5.75 to $6. *Cornmeal*—is also in good demand, and is selling in small lots at $3.75 to $4.

PROVISIONS.—Stocks of provisions in this market are very light, being only sufficient for the requirements of local consumption. *Butter*—is a drug, no demand except in retail. *Eggs*—have been received more freely and are worth 12c. Other articles nominal as quoted.

FREIGHTS.—The following are the Grand Trunk Railway Company's summer rates from Toronto to the undermentioned stations, which came into force on the 19th inst.:—Flour to all stations from Belleville to Lynn, inclusive 25c.; grain per 100 lbs. 13c.; flour to Brockville and Cornwall, inclusive, 30c.; grain, 15c.; flour to Montreal, 35c.; grain, 18c.; flour to all stations between Island Pond and Portland, inclusive, 75c. grain 38c.; flour to Boston, 80c. gold; grain 40c.; flour to Halifax, 90c.; flour to St. John, 85c. Freights by the Great Western Railway, to all points, unchanged.

Demerara Sugar Market.

The following is from Sandbach, Parker & Co's. market report, dated, Georgetown, Demerara, 23rd March, 1869:

SUGARS.—We have had a very active market, and prices have advanced fully twenty per cent. Immediately after the arrival of last mail, buyers entered into keen competition, and sales were made as high as $7 90 for Vacuum Pan, the next ten days prices reduced a little, and, $7 60 to $7 70, was the ruling quotation; since the arrival of the present mail, there is not so much disposition to operate, and the views of buyers are not in accordance with those of sellers: the transactions at public sale yesterday and to-day have been limited, our quotations are however, framed on the mean between the two parties, and are rates which we expect to see obtained during the week; the demand for Muscovadoes was quite as good as for Vacuum Pan, the quantity offering was however small.

MOLASSES.—For really good samples, there has been an active demand, and the extreme prices of 38⅛ for Vacuum Pan and 32¼ for Muscovado have been realized; for the lower grades the enquiry has been dull, and we have the same remark to make regarding the present state of this market as of Sugar.

RUM.—Very little doing, holders prefer shipping to accepting the rates offered here; we have not heard of a single transaction of consequence

SUGARS (package included) sold by 100 lbs. Dutch, 10 per cent. tare.

Muscovadoes, equal to	No. 8 Dutch Standard $4.50 ₱ 100 lbs.	In hhds. of about 1800 lbs. each.
	No. 10 do. $5.00 "	
	" 12 do. $5.50 "	
Vacuum Pan	No. 12 do. $6.00	
"	" 14 do. 6.50	
"	" 16 do. 6.75	
"	" 17 do. 7.00	
"	" 18 do. 7.50	

MOLASSES (package included, sold by Imperial gallon.)—

Muscovado, from 26 @ 30 cents, as to color and density	In puns of 100 gals.
Vacuum Pan from 27 @ 35 cents, as to color and density	
RUM (colored, package included, sold by Imperial gal. from 35 per cent, @ 38 overproof 40 cents.	Ditto.
From 38 per cent. @ 40 overproof, 45 cents.	

Halifax Market.

BREADSTUFFS.—Our markets for supers. continue active at quotations. The demand for No. 2 is reviving. Rye flour continues unsought for. White fall wheats dull at nominal price, with large stocks. Cornmeal active at quotations. Oatmeal dull and lower, with large stocks.

WEST INDIA PRODUCE.—Sugar continues active at full rates, with light receipts. Molasses dull and nominal, holders and buyers continue apart, and transactions are small. Rum inactive at former quotations. Coffee inactive and nominal.

Sugar V. P. 10½c to 11c.; Porto Rico 9½ to 9⅞c; Cienfuegos ——; Barbadoes 9c. to 9½c. (nominal); Molasses (P. R.) ——; Cienfuegos 41c. to 42c.: Trinidad 40c. to 41c.; Rum 58c. to 60c. for Demerara (in bond); Coffee—Jamaica 12c. (nominal).

EXCHANGE. Bank drafts London at 60 days at 13 per cent.; Montreal sight ¼ per cent.: New York gold ¼ per cent.; currency 21 per cent. discount; St. John, N.B. 3½ per cent premium.

Petroleum Regulations.

The Commissioner of Inland Revenue has issued a departmental notice, based on an order in Council dated 23rd April, allowing petroleum in process of manufacture to be removed under removal bonds. To reduce the fire test from 115° to 100° Faht. for petroleum intended solely for exportation. To dispense in part, or in whole, with the payment of the fee for testing petroleum. To dispense with the branding or marking the same, if deemed necessary.

His Excellency in Council has also been pleased to authorise the following regulations respecting the removal and exportation of petroleum:—1st—Petroleum may be removed, in bond, from the place where it has been distilled to any other licensed refinery for the purpose of deodorizing it, or otherwise completing its manufacture in bond, without payment of duty. 2nd—When petroleum in process of manufacture is removed in bulk—that is to say, in tank cars, or other vessels containing large quantities—and when the removal is made under removal bonds, the inspection fee of twenty cents per package is only to be collected on each tank or other package. 3rd—Petroleum, refined for exportation, may be inspected and branded; or it may be exported without inspection or branding, at the option of the exporter, and if exported without inspection or branding the inspection fee is not to be collected, but the refiner shall nevertheless, make a full return of his operations, and give a true account of the quantities refined by him in the same manner as if the products of his refinery were going into consumption. An allowance for waste occasioned by the process of deodorization, not exceeding 7 per cent., may be deducted from the quantity specified in the removal bonds, provided that such waste is proven to the satisfaction of the Collector of the Inland Revenue, and provided also that no part of the residuum composing the waste occasioned shall go into consumption for any purpose whatever.

SUGAR RAISING.—Within a few years past several European countries have directed considerable attention to the manufacture of sugar from beet roots. Last year 220,000 tons were made in France; 165,000 in Germany; 97,500 in Russia; 92,500 in Austria; 82,500 in Belgium; 15,000 in Poland and Sweeden, and 7,500 tons in Holland. Some English capitalists are making extensive arrangements for the manufacture of beet root sugar, while the French government is doing all in its power to stimulate it. Many assert that beet sugar is clearer than cane sugar, and because of this and other reasons, is preferable to the latter.

—The following notice appears in the Canada *Gazette*:—Notice is hereby given that application will be made to the Parliament of Canada, at its next Session, for an Act to incorporate Freeman Tupper, Thomas R. Pattillo, James F. Forbes, John H. Mulhall, John G. Morton, John D. McClearn, Lewis Sponagle, Stephen C. Tupper, James S. Sponagle, J. N. Freeman, Thomas Day, Joseph Inness, all of Liverpool, Queen's County, Nova Scotia, and others, under the name of "The Bank of Liverpool."

—The Anglo-American Peat Company launched a double-decked scow, called the *Nellie C.* at Edgarville, Welland County, the other day. She is to be employed in the service of the Company, and will have a peat machine on board.

—Notices of application from the Erie and Niagara Extension Railway Company and Erie and Niagara Railway Company to the next Dominion Parliament for powers authorizing both or either of these railway companies to construct and operate for a railway or other purposes a bridge over or a tunnel under Niagara River, or near Fort Erie, in the County of Welland, to construct, operate in construction and management with any similar corporate powers existing within the State of New York, or to be created by the Congress of the United States; said bridge to have a 250 feet span, to rise above high-water mark feet, to be of stone or iron piers, or wrought iron or steel superstructure, and to have a draw of feet for vessels.

PROSPECTUS.

The Provisional Directors of the Toronto and Nipissing ilway Company, finding that the further progress in the ilding of Broad Gauge Railways in Canada, with English pital, was no longer financially practicable or expedient lines of Railway projected for local traffic, and having come cognizant of the successful working for a number years of Railways built on the three feet six gauge, in the Kingdoms of Norway and Sweden, in the colonies of Queensland and New Zealand, and also in India, and that these Railways were capable of accommodating a traffic of about a million or a million and a half of tons of goods per annum, and of carrying passengers at a speed of twenty-five to thirty miles an hour, and seeing that the average speed of passenger trains, including stoppages, in Canada does not exceed twenty miles an hour, and that the total traffic of the Northern Railway (which offers a fair illustration of the traffic to be obtained by the Toronto and Nipissing Railway) did not exceed 195,000 tons and 140,000 passengers, have therefore resolved to construct the Toronto and Nipissing Railway on the three feet six gauge, in the most economical and efficient manner consistent with a total cost of $15,000 per mile.

The Directors have also noted Capt. Tyler's report on the Festiniog Railway, two feet gauge, in Merioncthshire, Wales, the freight and passenger traffic of which approximates closely to that of the Northern Railway, and, with the exception of the lumber traffic, largely exceeds that carried on the Lindsay and Port Hope, or on the London and Port Stanley Railway.

With a view to a just apportionment of the risks incidental to capital invested in Railway enterprise in Canada, it was resolved to ask the municipalities most to be benefitted by the construction of the Railway, for *one-third of the total cost of the Railway, viz., $5,000 per mile, by way of bonus* or gift. This proportion of the cost has *already been voted* for the main line, excepting less than $50,000, yet obtainable, in debentures bearing six per cent., payable in 20 years—securities which are unexceptionable, and will sell here at or near par.

Of the remaining two-thirds of the capital, it is proposed now to offer here $400,000 to be subscribed in stock. If that or a larger amount is not subscribed, bonds will be issued for the balance of about $6,000 per mile. Thus local capital to the extent of about two-thirds of the cost of the Railway, will be security to the holders of the bonds of this Company.

The interest-bearing capital will thus be $10,000 per mile.

The Directors do not propose to extend the line beyond Coboconk, towards Lake Nipissing, unless subsidized by the Government of this Province with land or money sufficient to guarantee the Company from the loss of any private capital to be invested in the sections of the line beyond Coboconk.

Nevertheless, the Company feel assured that the first section being successfully completed, the remaining sections will immediately receive aid from the Government to the extent necessary to secure the construction of the line to the ultimate terminus at Lake Nipissing—thus ensuring to the proprietors of the first section the practically unlimited timber traffic, as well as the general business of an immense new territory of twenty thousand square miles.

The terminus of the first section being located on the Gull River, with access to all its tributaries, and to the Burnt River, insures for this Railway a timber and lumber traffic certain to exceed in duration of supply and quantity the timber and lumber traffic of the Northern Railway, and which will undoubtedly equal or exceed that of the Lindsay and Port Hope Railway, which amounted to nearly one hundred millions of feet in the year 1868.

The sawn lumber traffic of the Northern Railway of Canada in 1868, amounted only to about fifty-five (55) million feet, and the square timber traffic to one million six hundred thousand cubic feet.

IN 1861.

The local traffic of the Northern Railway of Canada amounted to..		120,000 tons
Through		25,000 "
Passengers		100,618 "
Local Receipts	$362,507	
Through	48,432	$410,939
Running Expenses		68 per cent.
Excess of earnings over running expenses on local traffic	115,982	
Do. on through traffic	15,498	

Local earnings equal to 8½ per cent on a cost of $15,000 per mile; or 12½ on $10,000 per mile.

1864.

Local Traffic		180,700 tons
Through Traffic		8,344 "

Excess of earnings over running expenses ou local traffic	217,143	
Do. on through traffic	7,144	

Local earnings equal to 16 2-5 per cent on a cost of $15,000 a mile; or 23 1-10 per cent on $10,000 per mile.

1868.

Local and through traffic		194,583 tons
Passengers		138,965 "
Local Receipts	$537,380	
Through "	12,690	$550,070
Running expenses		61 per cent.
Excess of earnings over running expenses on local traffic	209,578	
Do. on through traffic	4,949	

Or equal to 14⅞ per cent on $15,000 a mile (local earnings); or 22½ per cent on $10,000 per mile.

1861—Running expenses per cent, 68; local tonnage, 120,000 through tonnage, 25,000; total tons, 145,000; passengers, 106,618; local receipts, gross, $362,507; through receipts, gross, $48,432; total receipts, gross, $410,939; local receipts, nett, $115,982; through receipts, nett, $15,498; dividend on $15,000 a mile, local, 8 1-3; dividend on $15,000 a mile, through, 1 1-10.

1864—Running expenses per cent, 52; local tonnage, 180,700; through tonnage, 8,346; total tons, 189,046; passengers, 104,346; local receipts, gross, $452,382; through receipts, gross, $14, 884; total receipts, gross, $467,266; local receipts, nett, $217,143; through receipts, nett, $7,144; dividend on $15,000 a mile, local, 15 2-5; dividend on $15,000 a mile, through, 1-2.

1868—Running expenses per cent, 61; total tons, 194,588; passengers, 138,965; local receipts, gross, $537,380; through receipts, gross, $12,690; total receipts, gross, $550,070; local receipts, nett, $209,578; through receipts, nett, $4,949; dividend on $15,000 a mile, local, 14 7-8; dividend on $15,000 a mile, through, 1-3.

Total tons, 528,629; passengers, 349,929; local receipts, gross, $1,352,269; through receipts, gross, $76,006; total receipts, gross, $1,428,275; local receipts, nett, $542,703; through receipts, nett, $27,591; dividend on $15,000 a mile, local, 12 5-6; dividend on $15,000 a mile, through, 2-3.

AVERAGE.—Total tons, 176,209; passengers, 116,643; local receipts, gross, $450,756; through receipts, gross, $25,335; total receipts, gross $476,091; local receipts, nett, $180,901; through receipts, nett, $9,197; dividend on $15,000 a mile, local, 12 5-6; dividend on $15,000 a mile, through, 2-3.

From the above data it will be seen that the Northern Railway carried an average for those three years of 176,209 tons of freight, and 116,643 passengers; the average gross receipts being $450,756, while the nett receipts from local traffic were $180,901, equal to an annual dividend of 12 5-6 per cent on a cost of $15,000 per mile; or 19 1-4 on $10,000 per mile.

It is remarkable and of consequence to intending subscribers for stock of the T. & N. R., that the nett receipts for through traffic for the same years only averaged $9,197 per annum, equal to a dividend of ⅔ of one per cent. on a cost of $15,000 per mile. This fact clearly proves the value of local as against through traffic.

The Grain Traffic tributary to the Toronto and Nipissing Railway undoubtedly will not fall below 900,000 bushels, and probably will largely exceed that quantity. The Passenger Traffic is anticipated to average 100,000 per annum.

The country through which the first section of the Toronto and Nipissing Railway will pass, is more populous, wealthy and extensive than that tributary to the Northern Railway—being one of the oldest and finest settled districts in the Province of Ontario. Various unsuccessful efforts have previously been made to accommodate this district with railways.

The most moderate estimate of the gross receipts from the traffic in timber, lumber, cereals, passengers, etc., to be carried over the T. & N. R. place the amount at an average of $400,000 to $500,000 per annum, for the first eight or ten years, when the traffic must necessarily increase to a much larger amount.

The traffic to create this revenue will be derived from the following items, and in about the proportions set forth:

Pine, or sawn lumber, for the first eight years, 80,000,000 ft. at $2 per 1,000 ft.	$160,000
Square timber, 1,250,000	37,500
Cereals, 900,000 bushels, at 5c. per bush	45,000
General goods, 15,000 tons, at an average of $3 40 per ton	51,000
Mails and Express	15,000
Cordwood, 25,000 cords at $1 50 per cord	37,500
Passengers, 100,000	100,000
	$446,000

Allowing 60 per cent. for running expenses, the nett earnings amount to $178,400—equal to a dividend of 14 per cent. on a cost of $15,000 per mile: and on the actual cost to the Company of $10,000 per mile, the dividend from such nett earnings would be 21 per cent,

The Provisional Directors invest their own means on their faith in the correctness of these estimates.

The terminus at Coboconk, on the Gull River, will connect the Railway with a vast stretch of Inland Navigation upon which steamers now trade, and which, with comparatively inexpensive improvements already partly undertaken by the government, will give these boats access to the Railway, and will afford almost inexhaustible supplies of pine and hard wood.

By the Act of Incorporation, the Company is specially bound to carry cordwood, and to afford every necessary facility for so doing at the specified rate of 3 cents per cord per mile for dry wood, for all distances under 50 miles, and 2½ cts. per cord per mile for all distances over 50 miles—a rate which has been found satisfactory, by the test of actual experience on the Government Railways in New Brunswick.

This condition will enhance the cost of fuel to the Company; but the increased traffic and prosperity consequent upon this trade it is fully believed will more than compensate for the extra cost of fuel.

The numerous association of gentlemen who have promoted and borne the preliminary expenses of this enterprise, and who desire to see it carried out in good faith on sound commercial principles, *are resolved*, in so far as their influence is equal to the task, to have this railway controlled by the most respectable capitalists of this city and the country on the route of the railway, who may take stock in it; to convert their own securities and pay cash to contractors, and not to surrender control of the railway to contractors or bondholders; to let the contracts in a

manner calculated to ensure the healthiest competition; in other words, to have value for the money from the turning of the first sod to the laying of the last rail.

The country on the route of the first section of the railway is generally level, although in two townships it is broken or rolling, yet the soil being loamy in these exceptions, and there being almost no bridges; the superficial examination had and the flexibility of the gauge ensures a minimum of cuttings and fillings---while timber for bridges and ties, and lumber for buildings and fences, can be had at the least cost possible in Canada.

Every other consideration in the first instance will be subordinated to the construction of a first-class permanent way, the best of timber bridges; deep and good ballasting Rails to weigh 40 lbs. to the yard, and to be selected of the best quality.

Arrangements are in progress which will secure to the Company free right of way, through the city, and egress, if desired, for a few miles out of the city, on the line of the Grand Trunk, by means of a third rail; and the disposition of the proprietors and other circumstance along the line are so favorable that the whole right of way will be obtained for an amount not exceeding $20,000.

Station grounds and dockage will be had in this city either free or for a nominal rental.

It is the desire of the Provisional Directors to have their Chief Engineer appointed with the concurrence, and subject to the approval of the Company's Consulting Engineers, Sir Charles Fox & Sons, who will be held responsible for the excellence of the works, economy of construction, and the success here of the system of narrow gauge railways of which they have large experience elsewhere, and with the initiation of which in this country they are honorably identified.

On these premises the Provisional Directors appeal for stock subscriptions to the citizens of Toronto, to the municipalities and to the business men and proprietors of land along the route of the railway, and to capitalists elsewhere, believing that the most cautious and prudent investors will find the stock of the Toronto and Nipissing Railway worthy of their attention.

The stock books will be opened at the Company's offices Front Street, on the 12th April, at 10 o'clock a.m.; meanwhile forms of application for shares can be had on application from the secretary and from the reeves and clerks of the several municipalities on the route of the railway, and from Messrs. Blaikie & Alexander, Toronto, and Pellatt & Osler.

CASEY S. WOOD, Esq., Lindsay.
JOSEPH GOULD, Esq., Uxbridge.
McDOUGALD & DAVIDSON, Montreal.
ALEXANDER FRASER, Esq., Quebec.

A member of the firm of Charles Fox & Son will be here shortly, and immediately on his arrival operations will be commenced.

THE TORONTO, GREY AND BRUCE RAILWAY COMPANY.

TOTAL LENGTH, ABOUT 200 MILES. INCLUDING BRANCHES TO KINCARDINE AND OWEN SOUND.

Length of First Section, from Toronto to the Garafraxa Road, about 70 Miles.

TOTAL CAPITAL, $3,000,000.

CAPITAL REQUIRED FOR THE FIRST SECTION, $1,050,000.

Bonuses already Voted by Municipalities for the First Section of the Main Line, $425,000.

As follows:—City of Toronto, $250,000; Albion, $40,000; Caledon, $45,000; Mono, $45,000; Orangeville, $15,000; Amaranth, $30,000.

Bonuses yet to be obtained for the first section, $77,000.
Bonuses required and obtainable to extend First Section, from Arthur to Mount Forest, $138,000.
First issue of Stock in $100 shares, $325,000.
Upon which bonds will be issued for $300,000.
The arrangements for the extension to Mount Forest, now in progress, when completed, will involve the further issue of Stock and Bonds to the extent of $125,000.

TEMPORARY OFFICES,—46 FRONT STREET, TORONTO.

PROSPECTUS.

The Provisional Directors of the Toronto, Grey and Bruce Railway Company, finding that further progress in the building of Broad Gauge Railways in Canada, with English Capital, was no longer financially practicable or expedient for lines of Railway projected for local traffic, and having become cognizant of the successful working for a number of years of Railways built on the three feet six gauge in the Kingdoms of Norway and Sweden, in the Colonies of Queensland, in India, and elsewhere, and that these Railways were capable of accommodating a traffic of about a million, or a million and a half of tons of goo per annum, and of carrying passengers at a speed twenty-five to thirty miles an hour, and that the to traffic of the Northern Railway of Canada has not exce ed 195,000 tons, and 140,000 passengers per annum, h therefore resolved to construct the Toronto, Grey Bruce Railway on the three feet six inch gauge, in most economical and efficient manner, at a total cost $15,000 per mile.

The Directors have also noted Capt Tayler's (now V President Grand Trunk Railway) report on the Festin Railway, two feet gauge, in Merionethshire, Wales, freight and passenger traffic of which approximates clos to that of the Northern Railway of Canada, and, with exception of the lumber traffic, largely exceeds that ca on the Lindsay and Port Hope, or on the London Port Stanley Railways.

With a view to the just apportionment of the risks cidental to capital invested in railway enterprise in nada, it was also resolved to ask the municipalities n to be benefitted by the construction of the Railways, one-third of the total cost by way of bonus or gift. proportion of the cost has already been voted for the f section (excepting small sums yet obtainable), in deb tures bearing six per cent interest, payable in 20 yea securities which are unexceptionable, and will sell a near par.

Of the remaining capital, it is proposed now to $325,000 to be subscribed in stock. If that or a la amount is not so subscribed, bonds will be issued for balance of about $300,000.

Local capital to the extent of *more than* two-thirds of cost of the railway will be security to holders of the bo of this Company.

The interest and dividend bearing capital will not ceed $9,000 per mile.

The Directors, although anxious, and having autho under their charter to make the village of Mount Fo the terminus of the first section, are unwillingly constr ed to select an eligible point, nearer, on the Garaf Road, in the Township of Arthur.

This decision may be altered, and Mount Forest m the terminus of the first section, by the Municipali concerned voting the amounts of bonuses, as required the Company.

In either case the capital derivable from bonusses be about the same per mile.

Arrangements to complete the remaining sections of Railway through the counties of Bruce and Grey, wil prosecuted with unremitting vigour, as soon as the f section is fairly under construction.

The Garafraxa Road, the great highway from O Sound, through the counties of Grey and Wellingto Guelph; and the other great highway, the Elora and S geen Road, from Southampton, through the counties Bruce and Wellington, ultimately uniting with the G fraxa Road, *passes within from 5 to 8 miles of the prop terminus of the first section* of the Railway, to connect which a gravel road will be built; while the Toronto Sydenham gravelled road, from Chatsworth, intersec the Durham and Collingwood road, reaches to within tw or fifteen miles of the Orangeville station, and when c pleted, together with the others, assures to the Toro Grey and Bruce Railway the traffic of the whole hear the North-western peninsula.

The bulk of the products of the great counties of Br and West Grey is shipped by water, on account of distance from the Grand Trunk Railway, only a part b moved in the autumn, the principal portion being r keted and stored, during winter, at the ports on the sh of Lake Huron and the Georgian Bay. At four of th points there are now stored a quarter of a million bush while the aggregate at all the points amounts to a 500,000 bushels.

The loss of interest on the capital thus invested, t ther with the proportionately lower prices paid for prod during winter in these remote districts, are serious d backs to their prosperity.

The distance deprives producers of the facilities affor by the *Grand Trunk Railway, and the Montreal Stea line* for moving, in winter, produce to markets, as wel of the very great advantage of Railway communicatio the flourishing city of Toronto, (the best distributing p either in winter or summer,) and now the capita Ontario.

The total area between the Grand Trunk and the Nort Railway of Canada is 6,800 square miles, of the richest most fertile land in Canada. The Toronto, Grey and B Railway will intersect this district, about mid-way bet the two other Railways, and when completed will co immense benefits on the people in that district, while i quite evident that the general business *which will brought to the city of Toronto* (exclusive of through tra will equal that brought to it by all the other Railways.

The Toronto, Grey and Bruce Railway will obtain a m larger passenger, grain, cattle, and first-class goods t than the Northern Railway; while the sawn pine, w *must be imported* to supply the absence of that build material, and the export of square hardwood timber, oak, elm, cherry, &c., staves, bark, fencing, and cordw (fuel), will afford a very large and remunerative bus to the Toronto, Grey and Bruce Railway.

The Freestone and other stone used for building mat in Toronto are now imported from Cleveland or Kings On the route of the T. G. & B. R. there are, near Ora ville, extensive quarries of the very best soft and h brown and white freestone, which will be in great req for export and general city building purposes. The vantages to the Railway and this city, of these quarries not yet generally appreciated.

The subjoined tables of the traffic of the Northern R

will serve to illustrate the local business of a railway iles long, through an average country in Canada.

IN 1861.

Local Traffic of the Northern Railway of Canada amounted to		120,000 tons.
ough		25,000 "
sengers		100,618 "
l Receipts	$362,507	
ough	48,432	$410,939

ning expenses		52 per cent.
ess of earnings over running xpenses on Local,Traffic	217,143	
on Through Traffic	7,144	
l earnings eqnal to 15 2-5 per cent. on cost of $15,000 a mile. Or 28 1-10 per ent. on $10,000 per mile.		

1868.

l and Through Traffic		194,583 tons.
engers		138,965 "
l Receipts	$537,380	
ough "	12,690	Total $550,070
ning expenses		61 per cent.
ess of earnings over running xpenses on Local Traffic	$209,578	
on Through Traffic	4,949	
qual to 14⅔ per cent. on $15,000 a mile ocal earnings). Or 22⅓ per cent. on 10,000 per mile.		

61—Running expenses per cent. 68; local tonnage, 120,- through tonnage, 25,000; total tons, 145,000; passen- 106,618; local receipts, gross, $362,507; through re- ts, gross, $48,432; total receipts, gross, $410,939: local ipts, nett. $115,982; through receipts, nett, $15,498; lend on $15,000 a mile, local, 8 1-3; dividend on $15,- a mile, through, 1 1-10.

64—Running expenses per cent. 52; local tonnage, 00; through tonnage, 8,346; total tons, 189,046; pas- ers, 104,346; local receipts, gross, $452,382; through pts, gross, $14,884; total receipts, gross, $467,266; receipts, nett, $217,143; through receipts, nett, $7,- dividend on $15,000 a mile, local, 15 2-5; dividend on 00 a mile, through ½.

68—Running expenses per cent. 61; total tons, 194,- passengers 138,965; local receipts, gross, $537,380; ugh receipts, gross, $12,690; total receipts, gross, 070; local receipts, nett, $209,578; through receipts, $4,949; dividend on $15,000 a mile, local, 14⅔; divi- on $15,000 a mile, through ⅓.

tal tons, 528,629; passengers, 349,929; local receipts, $1,352,269; through receipts, gross, $76,006; total pts, gross, $1,428,275; local receipts, nett, $542,703; gh receipts, nett, $27,591; dividend on $15,000 a mile, 12 5-6; dividend on $15,000 a mile, through, ⅔.

ERAGE—Total tons, 176,209; passengers, 116,643; local pts, gross, $450,756; through receipts, gross, $25,335; receipts, gross, $476,091; local receipts, nett, 180,901; ugh receipts, nett $9,197; dividend on $15,000 a mile, 12 5-6, dividend on $15,000 a mile, through ⅔.

om the above data it will be seen that the Northern way carried an average for those three years of 176,209 of freight; and 116,643 passengers; the average gross pts being $450,756, while the nett receipts from local c were $180,901, equal to an annual dividend of 12 5-6 ent. on a cost of $15,000 per mile.

is remarkable and of consequence to intending sub- ers for stock of the T. G & B. R., that the net re- s for through traffic for the same years only averaged 7 per annum, equal to a dividend of ⅔ of one per cent cost of $15,000 per mile. This fact clearly proves the e of local as against through traffic.

e grain, cattle, pork, goods and passenger traffic tri- ry to the first section of the Toronto, Grey and Bruce way will equal, if not exceed, for the same length of the local traffic of any other railway in Canada.

e following estimate of traffic from the first section e Toronto, Grey and Bruce Railway, is based upon ulations on the returns made by the Municipalities, an intimate acquaintance with their trade and re- es:

ssengers, 140,000	$145,000
reals, 2,000,000 bushels	100,000
ur, 50,000 barrels	15,000
neral goods, 50,000 tons	150,000
uare timber, 1,000,000 cubic feet	30,000
es, lumber, bark, posts, &c	10,000
dwood, 20,000 cords	25,000
ils and express	20,000
Total	$490,000

owing 60 per cent for running expenses, the net earn- would amount to $196,000—equal to a dividend of 18 ent on a cost of $15,000 per mile.

owing reasonable margin for increased cost or less (the moderate estimate of which will be undisputed,) remain the *strongest reasons* for anticipating a divi- of 10 per cent per annum.

By the Act of Incorporation, the Company is specially bound to carry cordwood, and to afford every necessary facility for so doing at the specified rate of 3 cents per cord per mile for dry wood, for all distances under 50 miles, and 2½ cents per cord per mile for all distances over 50 miles—a rate which has been found satisfactory, by test of actual experience, on the Government Railways of New Brunswick.

This condition will enhance the cost of fuel to the Company, but the increased traffic and prosperity consequent upon this trade, it is fully believed, will more than compensate for the extra cost of fuel.

The gentlemen who have promoted and borne the preliminary expenses of this enterprise, and who desire to see it carried out in good faith on sound commercial principles, *are resolved*, in so far as their influence is equal to the task, to have this railway controlled by the most respectable capitalists of this city and the country on the route of the railway, who may take stock in it; to convert their own securities, and pay cash to contractors, and not to surrender control of the railway to contractors or bondholders; to let the contracts in a manner to ensure the healthiest competition. In other words, *to have value for the money from the turning of the first sod to the laying of the last rail.*

The country on the route of the first section, with the exception of a short distance in Caledon, is one of the easiest for railway construction in Canada, especially the 22 or 25 miles from Orangeville to the Garafraxa Road.

In the Township of Caledon—the country is hilly and rolling. This portion of the route was carefully and completely surveyed and cross-sectioned under the auspices and by the direction of Mr. J. E. Boyd, M.I.C.E., and Engineer for the Government of New Brunswick, before the Company obtained their charter, and, as anticipated, no real difficulties were encountered; the highest grade, with moderate cuttings, being 65 feet to the mile. Mr. Charles Douglas Fox examined, for the Company, the figures and the profile, and, together with Mr. Boyd, gave their written opinion that the cost of this portion, per mile for earth-works, would not exceed $15,000. There are no rock cuttings.

Ballast, ties, timber for bridges, and lumber for fences, are convenient and available at the lowest cost in Canada, along the whole route of the first section.

Every other consideration, in the first instance, will be subordinated to the construction of a first-class permanent way; the best of timber bridges; deep and good ballasting. Rails to weigh 40 lbs. to the yard, and to be selected of the best quality.

Arrangements are in progress which will secure to the Company free right of way through the city, and egress, if desired, for a few miles out of the city, on the line of the Grand Trunk, by means of a third rail; and the disposition of the proprietors, and other circumstances along the line are so favorable, that the whole right of way will be obtained for an amount not exceeding $22,000.

Station grounds and dockage will be had in this city, either free, or for a nominal rental.

It is the desire of the Provisional Directors to have their Chief Engineer appointed, with the concurrence, and subject to the approval of the Company's Consulting Engineers, Sir Charles Fox & Sons, who will be held responsible for the excellence of the works, economy of construction, and the success here of the system of narrow guage railways, of which they have had large experience elsewhere, and with the initiation of which in this country they are honorably identified.

On these premises the Provisional Directors appeal for stock subscriptions to the citizens of Toronto, to the municipalities, and to the business men and proprietors of land along the route of the railway, and to capitalists elsewhere, believing that the most cautious and prudent investors will find the stock of the Toronto, Grey and Bruce Railway worthy of their attention.

The stock books will be opened at the Company's offices, Front street, on the 21st April, at 10 o'clock, a.m. Forms of application for shares can be had on application to the secretary, and from the reeves and clerks of the several municipalities on the route of the railway, and from Messrs. Campbell & Cassels, and from Messrs. Blakie & Alexander, Toronto, and from McDougall & Davidson, Montreal.

In conjunction with the Toronto and Nipissing Railway Company, it is agreed that a member of the firm of Sir Charles Fox & Sons, Consulting Engineers, will be invited here immediately by telegraph, when active operations will be commenced.

EDINBURGH LIFE ASSURANCE COMPANY.

FOUNDED 1823.

AMOUNT OF ACCUMULATED AND INVESTED FUNDS—OVER ONE MILLION STERLING.

HEAD OFFICE—EDINBURGH.

PRESIDENT—The Rt. Hon. the Earl of Haddington. MANAGER—D. Maclagan, Esq. SECRETARY—Alex. H. Whytt, Esq

CANADIAN OFFICE ESTABLISHED 1857. WELLINGTON STREET, TORONTO.

CANADIAN BOARD—Hon. John Hillyard Cameron, M.P., Chairman. J. W. Gamble, Esq., L. Moffatt, Esq., Hon. J. B. Robinson, C. J. Campbell, Esq. David Higgins, Secretary.

THE Edinburgh Life Assurance Company offer to the public the advantages of a Canadian as well as a British Company. They have invested a large amount of money on securities in this country, and the Toronto Local Board have full power, by an Imperial Statute, to take risks, make investments, and settle claims in Canada, without reference to the Head Office, Edinburgh. Some of the old Policies in the Company, which became claims during the past year, were settled by payment of amounts double of those originally insured, in consequence of the large bonuses that accrued on the Policies.

Every information that intending Assurers may require can be obtained at the Company's Office in Toronto, or at any of the Agencies which have been established in the principal towns in Canada.

J. HILLYARD CAMERON, CHAIRMAN. (33-1y) DAVID HIGGINS, SECRETARY.

Royal Fire & Life Insurance Company

OF LIVERPOOL AND LONDON.

CAPITAL, TWO MILLION STERLING,

WITH LARGE RESERVE FUNDS.

ANNUAL INCOME, - - - - - - - - - £800,000 STG.

FIRE BRANCH.

Very moderate rates of Premium. Prompt and liberal settlement of losses. Loss and damage by explosion of gas made good. No charge for policies or transfers.

LIFE BRANCH.

The following are amongst the important advantages offered by this Company:

Perfect security to assurers. Moderate rates of premium. Large participation of profits—the bonuses being amongst the largest hitherto declared by any office, and divided every five years. EXEMPTION OF ASSURED FROM LIABILITY OF PARTNERSHIP. Claims settled promptly on proof of death. Liberal allowance for surrendered policies. Forfeiture of policy cannot take place from unintentional misstatement. No charge for policies or assignments. Medical fees paid by the Company. Tables and forms of application, with all other information, can be obtained on application to

FRANCIS H. HEWARD,

MANAGER TORONTO BRANCH.

GEORGE OLIVER, Inspector.

W. B. NICOL, M.D., Medical Examiner.

THIS COMPANY, with machinery now in working order and in course of construction, will be able to manufacture this year FROM TEN TO TWELVE THOUSAND T OF GOOD FUEL. Actual working shows—

I. That the fuel can be produced for $1.45 a ton, and with the improved imachinery, at a much less cost.
II. That, for steam purposes, one ton of it is superior to one cord of wood, in the proportion of 31 to 27.
III. That, for domestic purposes, it is equal to wood or coal, and leaves very little ashes—about five per cent.

At the annual meeting of the Company in Montreal, it was decided to offer one thousand shares of Stock in Toronto. Mr. Isaac C. Gilmor has been appointed agent o Company in Toronto, and is authorized to receive subscriptions for the Stock.

Prospectus, Map of the Property, and further information may be obtained by addressing

WOODBRIDGE S. OLMSTEAD, SECRETARY,
EDWIN W. BRYANT, ACTUARY,
JAMES GOODWIN, PRESIDENT,
ZEPHANIAH PRESTON, VICE PRESIDENT.
LUCIAN S. WILCOX, MEDICAL EXAMINER.

Organized in 1846. Charter Perpetual.

The Largest Mutual Life Insurance Company. Numbering Over 75,000 Members.

BEING A PURELY MUTUAL COMPANY ITS ASSETS BELONG EXCLUSIVELY TO ITS MEMBERS,

ASSETS, $21,000,000.—Acquired by prudent and economical management of twenty-two years, without the aid of a single dollar of original capital.

SURPLUS ASSETS, $6,361,967—All profits divided among the members. Each policy holder is a member. There are no stockholders.

ITS DIVIDENDS—Have averaged over 50 per cent. annually. Total amount of dividends paid the members since its organization, $4,397,142.

ITS SUCCESS UNPARALLELED—It has arrived at the extraordinary condition where the income from annual interest alone is more than sufficient to pay all the losses. Total amount of losses paid by the Company, $6,868,528.

ITS RESPONSIBILITY—For every $100 of liabilities it has $154 of assets.

LAST YEAR'S PROSPEROUS BUSINESS.

Amount insured fiscal year, 1867 .....$45,647,191 00 | Income received fiscal year, 1867.....$7,530,886 19

During its last fiscal year this Company paid to its living members, and to the families of deceased members, nearly $2,000,000, and at the same time added more than four millions to its accumulated capital.

The whole record of this Company has been one of prudent management and prosperous advancement. Among the older and leading Life Insurance Companies its average ratio of expenses to income has, through its entire history, been the lowest of any.

ITS LIBERALITY—It accommodates the insured by giving credit for part premium, and grants insurance to meet all the contingencies and wants to which Life Insurance is applicable.

It issues policies on a single life from $100 to $25,000.

MEDICAL REFEREES—J. WIDMER ROLPH, M.D.; H. H. WRIGHT, M.D.

LIFE ASSOCIATION OF SCOTLAND.

Invested Funds Upwards of £1,000,000 Sterling.

HIS Institution differs from other Life Offices, in that the BONUSES FROM PROFITS are applied on a special system for the Policy-holder's personal benefit and enjoyment during his own lifetime, with the option of large bonus additions to the sum assured. The Policy-holder thus obtains a large reduction of present outlay, or a provision for old age of a most important amount in one cash payment, or a life equity, without any expense or outlay whatever beyond the ordinary Assurance Premium for the Sum Assured, which remains intact for Policy-holders' heirs, or other purposes.

Briton Medical and General Life Association,

with which is united the

BRITANNIA LIFE ASSURANCE COMPANY.

Capital and Invested Funds.....£750,000 *Sterling.*

ANNUAL INCOME, £220,000 STG. :

Yearly increasing at the rate of £25,000 Sterling.

THE important and peculiar feature originally introduced by this Company, in applying the periodical Bonuses, so as to make Policies payable during life, without any higher rate of premiums being charged, has caused the success of the BRITON MEDICAL AND GENERAL to be almost unparalleled in the history of Life Assurance. *Life Policies on the Profit Scale become payable during the lifetime of the Assured, thus rendering a Policy of Assurance a means of subsistence in old age, as well as a protection for a family,* and a more valuable security to creditors in the event of early death; and effectually meeting the often urged objection, that persons do not themselves reap the benefit of their own prudence and forethought.

No extra charge made to members of Volunteer Corps for services within the British Provinces.

Insurance.

The Waterloo County Mutual Fire Insurance Company.

HEAD OFFICE: WATERLOO, ONTARIO.

ESTABLISHED 1863.

THE business of the Company is divided into two separate and distinct branches, the

VILLAGE, FARM, AND MANUFACTURE.

Each Branch paying its own losses and its just proportion of the managing expenses of the Company.

C. M. TAYLOR, Sec. M. SPRINGER, M.M.P., Pres.
J. HUGHES, Inspector. 1-y

Etna Fire and Marine Insurance Company of Dublin,

AT a Meeting of the Shareholders of this Company held at Dublin, on the 13th ult., it was agreed that the business of the "ETNA" should be transferred to the "UNITED PORTS AND GENERAL INSURANCE COMPANY." In accordance with this agreement, the business will hereafter be carried on by the latter Company, which assumes and guarantees all the risks and liabilities of the "ETNA."

The Directors have resolved to continue the CANADA BRANCH, and arrangements for resuming FIRE and MARINE business are rapidly approaching completion.

T. W. GRIFFITH,
16 MANAGER

Lancashire Insurance Company.

Meetings.

BANK OF UPPER CANADA.

The half-yearly meeting was held on the 5th inst. The minutes of the November semi-annual meeting were then read, and subsequently the following balance sheet :—

LIABILITIES.

Bank Notes in circulation		$103,558 00
Due to Depositors on all accounts		105,386 50
" " on Trustees certificates		226,317 91
" Glyn & Co		126,085 43
" Government		1,122,639 10
Total liabilities		1,683,986 94
Balance at credit of Profit and Loss account		461,455 60
		$2,145,442 54

ASSETS.

Specie and balances with banks		$18,739 35
Mortgages and securities new	$78,953 81	
Mortgages in course of completion	59,853 44	
		129,807 25
Mortgages, old account		54,437 83
Real Estate		928,963 51
Railway Stocks, Debentures, &c.		11,251 67
Bills, Judgments, &c.		1,002,242 93
Total assets		$2,145,442 54

MEM:—The above does not include interest, which has not been added either to the Assets or Liabilities.

The Assets are held in the Balance Sheet at the same valuations at which they were handed over by the Bank of Upper Canada to the Trustees.

Mr. McCord, from what he gathered from the correspondence with the Government—and that contained more satisfactory information respecting the facts of the whole matter than he had yet seen published in any other form—it appeared to him that the amount due to the Government was $1,122,639, and to depositors $460,000 more ; making in all $1,482,639. In paying this off, it is calculated there will be a deficiency of from $500,000 to $600,000.

The Chairman—This is a rough estimate. We cannot calculate within $100,000 or $200,000 as yet, but we do not consider that it will be less than $500,000. It may, however, be more; there is not much prospect of it being less.

Mr. McCord had thought over the whole matter, and, after doing so, had determined to submit a proposition which would be, he imagined, satisfactory to all concerned. He submitted his idea in writing, as follows, placing it in the form of a series of resolutions :—The stockholders present consider that it is desirable, in the interest of all parties concerned, that the affairs of the Bank should be immediately wound up ; and that a special meeting of all the stockholders be called together with that object, on the first Monday of October next, to consider the following propositions : 1st. That the bill-holders and depositors be paid in full. 2nd. That the balance, after paying expenses, be equally divided between the Government and such stockholders, widows and orphans, and others, who have lost their all by the failure of the Bank.

This meeting also desires to make the following recommendations to the trustees :—They are of opinion that all the real estate should be marked at a very low upset price, and offered immediately to public competition by auction. That the trustees receive from every one indebted to the Bank, for property sold since the failure of the Bank, as well as for all the property which may hereafter be sold, the notes of the Bank at 75 cents on the dollar, at least. That the trustees revise the present expenses of the trust, with the view of cutting them down to the lowest figure possible. The stockholders are also of the opinion that a less expensive means of winding up the affairs of the Bank, by the appointment of a liquidator, might be adopted.

In introducing these resolutions Mr. McCord pointed out the necessity of winding up affairs as speedily as possible ; the expenses were large ; in England very large banking institutions were wound up by one person, and if a liquidator were appointed here the expense would be reduced at least one-half. Mr. Mead asked for the trustee's reply to the Finance Minister, but the chairman considered it inadvisable to give it publicity.

Mr. Hime offered an amendment, which, although agreeing in some respects, would, he thought, meet the views of the meeting better. He did not wish to see the lands sold by auction, but thought it would be far better to try and reduce the expenses by having only one man as liquidator under the supervision of the Government. The Government then would be more likely to deal favourably with them. He moved in amendment. "Whereas it appears that the Government are making enquiries with a view to enforcing their claim against the shareholders of the Bank of Upper Canada, and that from the relation which the assets bear to the liabilities such enforcement would not only absorb the available assets, but would also render a call upon the shareholders necessary. And whereas a large number of the shareholders are foreigners, minors, trustees, and persons residing in foreigh countries, from whom nothing could be collected, and all the shareholders have already lost so much by the institution that further calls must produce great distress."

"Resolved, that it is expedient to reduce the expenses of winding up (now over $14,000 per annum), to the minimum, and that such action be taken either by appeal to Government or otherwise, as will do away with the allowance of $4,000 per annum, now paid to the three trustees, and place the winding up under the control of one competent manager, who shall, under the supervision and inspection of the proper department of Government, bring to an end, with as great expedition as the interests of all concerned will allow, the process of liquidation."

In answer, after some further discussion, the motion and amendment were allowed to stand over, and the meeting adjourned.

The Finance Minister in his communication to the trustees says:—It becomes necessary to consider what course ought to be taken in the public interest. The undersigned is of opinion that communication should be had with the shareholders, and that they should be afforded the option either of paying off the Government and taking the assets into their hands; or of making payment to the

Government of a sum of money to be relieved of their liability, allowing the estate to be realized under the present Trust, or otherwise, as the Government may see fit; or, thirdly, of suggesting any other course, either as respects the present method of liquidation, or touching the ultimate payment of the debt to the Government. Unless the Government bring the property of the Bank to sale under a writ of extent, and thus anticipate the time which the Trustees are of opinion will be occupied in realizing the estate, five years will elapse before the creditors can enforce by law any contribution from the shareholders under the double liability clause. It is impossible to anticipate what changes in the personnel of the shareholders may take place before that time, whereby their capacity to make good their respective contributions might be affected. Delay increases probability that the loss will ultimately be borne less equally than if an adjustment now took place and that the sources to which the Government might look for payment, will every year be of less worth.

The course which the Government may deem it its duty in the public interests to adopt, whether to await the gradual realization of the assets, or to enforce its remedy at once, will doubtless be influenced by the action of the shareholders, and the proposals they may make to the Government after due consideration of the actual situation and when apprised that the Government deems it fitting that a definite arrangement should now take place.

In conclusion the undersigned would observe that until the shareholders have had an opportunity of electing either to pay off the Government, or to make an offer on some terms to make good the anticipated deficiency, or of suggesting some different course of action from that now followed, it would be premature to consider whether any and what means might be taken to deal with the other creditors, or to prosecute the liquidation of the estate by less expensive means than those now adopted.

BANKERS' MEETING.

At a meeting of Representatives of Banks of the Dominion of Canada, held at Ottawa on the first of May, the following were present: The Hon. Mr. Simpson, Mr. Starnes, representing the Ontario Bank; Hon. Mr. McMaster, Bank of Commerce; Hon. Mr. McDonald, Mr. Metcalfe, M. P., Mr. Woodside, Royal Canadian Bank; Hon. Mr. Burnham, Mr. Hague, Bank of Toronto; Hon. Mr. Benson, Niagara District Bank; Mr. Stevenson, Quebec Bank; Mr. Sache, Molsons' Bank; Mr. Lewin, Bank of New Brunswick; Mr. Jack, all the Halifax banks and the Commercial Bank of Windsor.

It was moved, seconded and Resolved:

That Mr. Lewin, of the Bank of New Brunswick take the chair; and that Mr. Jack be the secretary.

Mr. Hague, as convener of the meeting stated its objects, and read a letter from the cashier of the Merchants' Bank, Montreal, regretting the inability of the President or himself to be present at the meeting, and expressing their hope that the preservation of the Bank circulation in Canada may be one of its results.

He also read the resolutions adopted by the banks of Halifax, and certain banks in the Provinces of Quebec and Ontario (copies af which are hereto appended)—

Whereupon it was moved by Mr. Simpson, seconded by Mr. Stevenson, and resolved,

That this meeting concur generally in the sentiments expressed in the resolutions adopted at meetings of the Bankers of Halifax and of Montreal, Quebec and the Province of Ontario, and is of the opinion that it is desirable by all proper means to secure the continuance of the bank note circulation of the Dominion as it at present exists.

A further resolution was moved by Hon. Mr. Simpson, seconded by Mr. Metcalf, M.P., to the effect—

That safety to creditors of banks may be fully attained without sacrificing those resources, on which the business of the country depends and without endangering a gold basis by introducing into the charters of the Banks provisions as to the double liability of shareholders, the impairment of capital, reserves, rests, etc. This resolution was carried.

Moved by Hon. Mr. Simpson, seconded by Mr. Sache,

That a deputation, consisting of the five following gentlemen, wait on the Finance Minister, and lay before him the views of the meeting and report to a future meeting at the call of the Chairman: The Chairman; the Secretary; Hon. Mr. Simpson, (or Mr. Gibbs, M.P., in his absence); Mr. Stevenson; Mr. Hague.

The Meeting then adjourned.

Resolutions adopted by the Halifax Banks.

HALIFAX, N.S., April 17, 1869.

1. That the banking system in existence in Nova Scotia has been in successful operation for more than thirty years, and has been largely instrumental in aiding the development of the resources of this province and building up its trade and commerce. That there has never been the failure of any bank, nor any suspension of specie payments. That bank notes have always been on a par with gold and convertible into gold on demand, and note holders have never sustained any loss by them. That the public are satisfied with the system, and neither ask nor desire any change.

2. That the banking capital, together with the loanable funds derived from the bank note circulation and the substitution of that of the government, would seriously interfere with and lessen the resources of the banks, cause discounts to be reduced nearly if not quite one fourth, and thereby cripple trade and commerce.

3. That the introduction of such a radical change as the withdrawal of the Bank note circulation and the substitution of that of the Government would seriously interfere with and lessen the resources of the Banks, cause discount to be reduced nearly, if not quite, one-fourth and thereby cripple trade and commerce.

4. That the national banking system of the United States, having taken its rise under a suspension of specie payments, is not applicable to the state of the Province. If adopted, the banks will be compelled to loan to the government about one-half of the amount now advanced for mercantile purposes which would almost, if not entirely prostrate and ruin the business of the province.

5. That the adoption of either plan would permanently reduce the resources available for banking purposes. By giving time for withdrawal of the circulation, or the purchase of bonds, this might prevent sudden distress and mitigate the stringency of the money market, but there would be nevertheless a certain gradual reduction of discount which would soon tell most injuriously on trade. Under the circumstances to increase the capital stock, would not make up the deficiency; for the monies available for this purpose are already held by the banks in the shape of deposits, and to take from the deposits and add to the capital stock could not possibly improve the financial position.

6. That if it is thought desirable to give increased security to note holders, this could be done without deranging the present arrangement by making the notes, in case of failure, a first lien on the assets of the bank, and payable as soon as sufficient funds might be collected. There are reasons why note holders should be protected, but none why depositors should be, and this plan would perfectly secure the former without inflicting any injury on business, or diminishing in any way the funds available for banking purposes.

7. That in our opinion the present system, whereby the circulating medium is furnished by the banks, is the best adapted to the circumstances of the country, as it increases the banking funds employed in the encouragement of trade and manufactures, which in a new country are always required; and we would strongly deprecate any change in the law which would have the effe of overthrowing the present note circulation the banks, or curtailing their capital by a compu sory loan to the government, by their bei compelled to invest a portion of it in governme debentures, which are of variable value, a could not be converted into gold during financ panic or pressure in time to prevent suspension specie payments or greater loss.

Resolutions adopted by the Ontario and Que Banks.

At a meeting of Bankers held in the Merchan Bank of Canada, on the 17th day of April, 18

It was moved by Mr. Jackson Rae, seconded Mr. William Sache, and carried:

Whereas, the existing system of banking Canada has been found subservient in a high deg to its commercial interests has been tested long experience, has proved itself to be well adapt to the requirements of an agricultural communit and has resulted in a high degree of security a stability:

Resolved,—That in any renewal of the chart of banks it is important for the best interests the public that no change of a fundamental char ter be made in the system and particularly t the note circulation be preserved.

2nd. That the adoption of a system of same character as the national banking system the United States, or founded on the same pr ciple of imposing a rigid limit to the total circu tion to be covered by government securities wo be highly detrimental to the public interest, causing a large withdrawal of capital now enga in furthering its commercial enterprises, con quent scarcity of money, high rates of inter with greater loss to the lender and general finan distress.

3rd. That a system of note issues made dir by the government would have the same injuri effect upon the commercial and financial affai the country, and would in addition have an evitable tendency to depreciation with all disastrous consequences to every class of community.

4th. That holding these views we deem it importance that they be urged upon the attent of the legislature during the present session every practicable mode.

Insurance.

FIRE RECORD.—St. Catherines, May 7.—Ho of P. Donohoe, Niagara-street; loss stated at $ to $500, and insurance at $200.

Carleton, N. B.—Workshop of Levi Long, a adjoining grocery and liquor store of Mrs. O'Lea The buildings were owned by H. Tooney; in rance $800.

St. Catherines, May 3.—A fire broke out in Murray House stables. The stables were con med and with them most of their contents. sured in Hartford for $250. A tavern just be the stables, belonging to J. C. Rykert, Esq., occupied by Mr. Burtch, was badly damaged its roof and sides.

Brantford, May 7.—A large flax mill was c sumed by fire this morning at one o'clock, n Brantford. It has been unused for some ti Loss about $5000; fully insured. It is suppo to have been the work of an incendiary. buildlng was owned by Kerr, Brown & Co., l milton, and rented to Mr. Elliott, of Galt.

Peterboro, May 6.—Sutherland's store-house, Ashburnham, and the adjoining dwelling hou grocery and outbuildings, were all destroyed fire, and the flames soon spread to two neighbor tenements one occupied by Mr. Thomas Coe, b cher, which was entirely consumed; the other Mr. George Brown, plasterer; uninsured. Mr. therland's loss on grain is about $2,000; insu in the Royal for $1,500; Imperial $1,000. Wood's loss on buildings is covered by insura in the Western to the extent $1,000 or $1,250

St. Catherines, May 6.—Workshop occupied by ames Orr as a paint shop; an adjoining wooden uilding occupied by a man named Matthew's was ulled down. The buildings destroyed were wned by Daniel McGuire, and were insured in he Hartford of Connecticut, for $500. Orr had is stock of paints, oils, &c. insured in the same ompany for $600.

East Zorra Township, May 3.—Barn of Wm. urk with contents, he is a heavy loser.

East Oxford Co., Ont., May 2.—Dwelling house f John Clark; insured for $1,000. Furniture ostly saved.

Mitchell, May 11.—Last night the barn belong- ng to George Moodie, of Logan, was burnt, ogether with a quantity of grain and implements. oss $800. No insurance. A warrant was issued arly this morning against Moodie's brother-in- w for incendiarism.

Montreal, May.—The store of Wm. Hagan, on . Lawrence, Main street, caught fire from the plosion of a coal oil lamp. Mr. Hagan's loss ill be heavy, it is said, although he is insured. lso workshop of Mr. Kieltier, cabinet-maker— so, stables of Mr. Marchand, in St. Charles orromee street.

Millpoint, Ont., May 10.—The dwelling house Mr. Francis Van de Bogart, about one mile rth of Napanee, was burned this morning. It said to have been insured. Cause of fire known.

Nonforfeiture.—The new Insurance law of lichigan contains the following provision relative the non-forfeiture of Life Insurance Policies: Policy of Insurance on life, issued after this t shall take effect, by any Company organized der the laws of this State, shall be forfeited or come void by the non-payment of any premium reon, after the first, any further than as follows: e net value of the Policy when the premium be- nes due and is not paid, shall be ascertained ac- ding to the "American Experience Table" rate mortality, with interest at four and a half per tum per annum. Three-fourths of such net ue shall be considered a net single premium of whole Life Insurance, and the amount it will ure shall be determined according to the age of party at the time when the unpaid premium ame due, and the assumption aforesaid in re- d to interest and rate of mortality; but if no lication be made to the Company for such d-up Policy within one year after default shall e been made in payment, then all liability on part of the Company on the Policy on which party is in default, shall cease.

VALUABLE INSURANCE STATISTICS.

At the recent meeting of the U. S. Board of Underwriters the Executive Committee re- ted the following:—

The ten years from 1859 to 1868 inclusive, give res that aggregate, for the deeade, capital $379,- 584; dividends $39,503,648; average percent- 10.39; but the average earnings of capital e been 9 per cent., leaving the average results he business so shown as 1.39 per annum. But en this is not the whole truth, for in that time 68,623 of actual capital have been absolutely and should be deducted from the dividends, ing only $32,735,020 as the actual net result. wever, the increase in undivided profits during period is $6,160,072, which should be added deduction for loss of capital, and this shows average annual percentage to be 10.23, of h 9 was from other sources than premiums, ing the net earnings of the business as such 1.23, a figure utterly insignificant in view of nature of the business and the risks assumed. milar tables of figures for ten years, aggregate follows: premiums received, $213,357,860; s paid, $126,456,476; percentage, 59.26. ench statistics indicate losses at 55 per cent. emiums; German figures show 57½ per cent.; Russian, 58.26. The New York companies doing fire, inland and marine business, from 1848 to 1866, inclusive, show 66.32 of losses to premiums, while the strictly mutual State companies show 61.40. The companies reporting to Massachusetts, from 1858 to 1866, inclusive, show 60.18, while the grand totals brought out by Mr. Barnes new blank, show of premiums received since organization by the companies, $347,088,679; against losses paid of $207,330,534; or a grand average of 59.73; a strong confirmation of a more uniform certain law of average than is generally admitted. We may therefore assume 60 per cent. as the average percentage of losses to premiums, and be sustained by the inexorable logic of official sworn facts.

Similar tables give aggregates for the year of premiums, including inland, $247,997,692; expenses, $74,014,794; percentage, 29.84. English companies average about 31. French and German companies about 30. We therefore assume 30 per cent. in round numbers as the average expenses of conducting the business. Adding losses and expenses together, we find only one-tenth for profit, loss of capital, sweeping conflagrations and epidemic periods. How far this can be trifled with by ignorance and credulity, the public must judge for themselves. To the intelligent and honest underwriter these figures are full of meaning and admonition.

To us, as practical underwriters, it is of vital importance to know the absolute relation between losses and risks assumed. With this in view, tables have been prepared embracing nine years from 1860 to 1868, inclusive, whose aggregates are these: fire risks written, $25,348,253,481; fire premiums received, $198,944,401; fire losses paid, $118,425,228; percentage of losses to premiums, 59.42; percentage of fire losses to fire risks written, .4671; amount of fire risks written to $1, of losses, $214 04; average rate of premiums on fire risks .7848. In 1860 we paid for losses, 4 323-1000 mills per cent. on risks written; in 1868, 4798-1000 mills per cent., and during the entire nine years, an average of 4 671-1000 mills per cent. The average of 1868 is therefore in excess of that for the whole period, yet happily far below that of 1867, and very far below that of 1866, thus showing the advance that has been made, and indicating the causes which have operated favorably to this reduced average as compared with those years; towards which the labors of this Board have so largely contributed.

In 1860 we could write $231 27 for every dollar of loss; in 1868, $208 40; while the average for the nine years was, $214 04; yet our ability to write during the past year was far greater than in 1867, and greatly in excess of 1866, when the lower average is reached. It is apparent, therefore, that no essential reduction of rates can be entertained with safety to ourselves and the insured until our ability to write shall equal the general average, or at least of the period named.

The average rate of premiums in 1860 was .7336; in 1868, .9342; with an average rate for the nine years of .7848; the maximum being in 1867, while the minimum loss for the last four years was in 1868. The past year witnessed a reduction of 143-1000 of a mill per cent. in the rate of premiums, and of 662-1000 of a mill per cent. in the average losses. These may seem to be unimportant infinitesimals, but when we consider that the margin of profits is less than one-tenth of the premium, and that over twenty-five thousand million dollars were underwritten during the time under review, we shall more fully appreciate the necessity of having these infinitesimals on the RIGHT SIDE of our calculations.

Of the many evils that have grown up in the business of fire underwriting, none has been more prolific of loss than "over insurance." This evil has become so conspicuous as to alarm the public, and call from the public press most severe and deserved criticism. At least one-third of the losses on personal property are on property largely over-insured. The pernicious "privilege" for other insurance, without notice, makes it impossible to retain an interest on the part of the insured in the preservation of his property. It not only *permits*, but it *induces* over insurance, and is a direct temptation to *fraud* and *arson*. How wantonly an old landmark of the business has been removed, the increase of fraud during the past few years bears convincing testimony. This practice of over insurance must be corrected by our own efforts, or it will soon assume such proportions as to demand the interference of the law. The matter has already caused much discussion, but the evil is as yet unremoved.

Although no extensive conflagrations have occurred since we last met, the loss records will bear testimony that the torch of the incendiary has not been idle, but the numerous convictions for that crime furnish gratifying evidence that this nefarious trade has not been plied with the usual impunity of former years.

Statistics gathered in detail from the companies, indicate that about 32 per cent of losses are the result of design on the part of the insured, or the direct act of the incendiary. Records kept in the city of New York for 13½ years show that of 4,387 fires, 1,283 were incendiary, and that of $23,679,005 losses paid, $7,909,002 were incendiary, being nearly 33½ per cent. Even as a pecuniary question, the arrest and conviction of incendiaries will be found a good investment; but there is a higher point from which to view these obligations—that of duty to the State and the people. This duty requires of us rigid investigation and due presentment, with a constant and energetic care of cases, until conviction is followed by punishment.

Railway News.

Northern Railway.—Traffic receipts for week ending May 1st, 1869.

THURSDAY, MAY 13, 1869.

THE BANK OF UPPER CANADA.

On the 18th of September, 1866, this Bank suspended, and, on the 12th November, following, assigned to certain trustees. An Act of Parliament (31 Vic. c. 17) was obtained confirming that assignment, and creating a new body corporate under the name of "The Trustees of the Bank of Upper Canada." The Act provided for the nomination and appointment of three trustees to carry out the deed of assignment, one to represent the shareholders, and the other two, "the interests of the creditors of the said bank." One was elected by the shareholders, and two were appointed by the government. The Act further provided that the trustees should meet at least once in every two weeks and be entitled to receive for their own remuneration the sum of four thousand dollars per annum, to be divided among them.

The present state of affairs appears to be this: The Bank owes the Government, exclusive of interest, $1,122,639, and is liable to others, exclusive of Glyn & Co., who hold security, for about $460,000; the assets will be insufficient to meet what is owed by about $600,000; and the assets "cannot be realized in a shorter period than five years." The subscribed capital of the Bank was originally about $3,100,000 divided into shares of $50 each; but it has since been reduced, and is now only $1,930,000, divided into shares of $30 each, and held by upwards of 1,000 persons. Estimating the deficiency at $600,000, a contribution of about $9.33 per share would be required.

The shareholders are classified under the following heads:—

Executors, guardians, minors	$129,360
Trustees	337,500
Municipalities	12,800
Females living abroad	585,165
Residents in Canada, not known to Trustees	172,220
Residents in Canada, believed to be bad	139,900
Residents in Canada (including females), believed to be good	562,890

The cost of winding up is $14,000 per annum. Of this amount, $4,000 are divided among the Trustees and $4,000 go to the Solicitor. $350 are paid out by way of "travelling expenses." A secretary receives $2,000, the manager of the land department $1,200, a clerk $600 and a messenger $200.

What naturally strikes one in reading over this list is the formidable character of the defunct institution, with its three Trustees, its Solicitor, its Secretary, its clerks, and its messenger; its estimated deficieney of $600,000 and its $14,000 per annum working expenses. Why the largest Building Society in the country, with a million of dollars of cash receipts in one year, does not pay out in working expenses more than $16,300 per annum! Its President and seven Directors received, last year, just $2,380, while the three Trustees of an institution in liquidation drew $4,000 as "remuneration." These three gentlemen receive $1,333.33⅓ a-piece. If they met twice a month, and were paid by the sitting, at the rate of $4,000 per annum, each sitting would have yielded them about $56, each; if they met once a week, about $26 a sitting, for each. Now, from $3 to $5 a meeting is considered good pay for the Directors of even the most flourishing Corporations; so that the unfortunate shareholders of the Bank of Upper Canada have the exquisite pleasure of witnessing the accumulation of liability, and paying for the sight the highest possible price. These three Trustees are excellent men, and we cannot blame them for drawing the pay secured to to them by the Act. But in the name of all that is reasonable, what occasion is there for three Trustees at all? why should they be paid such an extravagant sum? They are n responsible, except for loss attendant up wilful neglect, misconduct or default, each f his own acts; while in the case of Direct of Corporations, generally, there is a la amount of responsibility. They are hig respectable men, but they do not bring to t task of winding up any unusual or extra dinary qualifications. It is no disparagem of their abilities to say that they could ne have executed their trust without the ass ance of those who knew something about affairs of the Bank, and we venture the sertion that even now, if left to their o devices, they would make sad work. T fact is they are useless luxuries. If th Trustees must be retained, and paid $4,0 year, the three gentlemen now in possess are, we suppose, just as capable and us as any who could be named. But what b ness man can look with approbation on paraphernalia with which that decayed h is surrounded! What shareholder can v with equanimity an extravagant expendit which is widening his liability slowly surely! No wonder dissatisfaction is played at semi-annual meetings. The o wonder is that there is so little irritation m ifested, so little indignation expressed. reference to the proceedings at the late m ing it will be seen that the absurd positio affairs is fully recognized. Mr. McC pointed out how expeditiously and che Corporations are wound up in England. Hime's resolution hit the nail on the h It affords the only sensible solution of Bank problem that has as yet been offere the consideration of the shareholders. away with the Trustees altogether, or at l two of them, place some competent man charge, as liquidator, with such assistanc the way of clerks as may be necessary, have the accounts audited, and the proce ings supervised by an officer of the Fina Department. Hon. Mr. Rose in his comm nication to the Trustees asked for suggesti respecting the liquidation. No more sens suggestion has been made than the one fered by Mr. Hime, and it would be well all concerned if it were given due consid tion. Under the present method of liquidat the concern is eating itself up.

Since the above was written we have b informed that the Trustees have dismiss clerk, and have given the messenger notic leave. Such laudable economy is worth recognition, but we are disposed to think t they are beginning at the wrong end. grievous items in their accounts are $4. to the Trustees and $4,000 to the Solici The Solicitor will certainly not accept a jud ship while he can feast on such a rich case.

BANKING AND CURRENCY.

The unanimity with which the bankers of ova Scotia, New Brunswick, Quebec and ntario have expressed themselves against e abrogation of the system of banking un- r which this country has so long prospered, d which has been found so well adapted to peculiar circumstances, should cause those omoting a change to hesitate. It is neither olitic nor statesmanlike to run full tilt ainst experience. When men who have ade the subject of banking a special study d have had the best opportunities of judg- g of the requirements of the country, are decided in their condemnation of the pro- sed government scheme, common sense ould induce politicians to give heed to opi- ons having all the weight of authority. The stem at present in force is fundamentally e best for Canada. Of course it is not so rfect as to be above amendment. Machinery ght be devised for the enforcement of the uble liability of shareholders, and provision ade for summary liquidation. No banker ould or could object to having the note cir- lation made a first lien on the assets, thus ndering its prompt redemption an absolute tainty. In case of impairment of capital, might be made imperative to have the de- ency called up at once. Stringent rules ght be framed to prevent the declaration of idends unless an adequate reserve were pt on hand. But to secure such advisable endments, it is not necessary to sweep ay the whole system. The banks are now sking a renewal of their charters, and such visions could be incorporated in their new ses.

But it must not be supposed that the pro- ed scheme is opposed by bankers only. e number of petitions which have been sented to Parliament, signed by the most minent merchants of our cities and towns, ws that our mercantile community is med. There is good reason for such a ling. The U. S. Comptroller of the Cur- cy in his report for 1867, said:

"A paper currency furnished exclusively the government * * * possesses no inher- qualities which adapt it to the wants of le. * * There is no relation between the rce of supply and the business of the ntry. It is an iron currency in its utter t of that elasticity so essential in a circu- ng medium. This has been abundantly ved by the experience of the last five years. ar has the legal-tender currency been n performing the equable and harmonious ctions of money, in its relation to trade industry, that it has been the great dis- ing element. By it all relatives values e been unsettled, trade interrupted and industry disorganized. * * * * * Nothing has been permanent. Violent fluctuations have characterized the market for every commodity, and speculation has usurped the place of regular and legitimate traffic." The last number but one of the New York *Financial Chronicle* contains the following significant statement:—"A special cause of embarrassment to business has also arisen from the abnormal condition of our currency system, resulting in frequent spasms in the money market, and rendering it impossible for merchants to get needful accommodation from the banks." So that merchants are interested in this matter, and merchants will be the first to suffer from the introduction of the proposed system. The present is, of all times, the most inopportune for effecting a change of system. Should times grow harder, and the banks curtail their discounts by the large amount necessary to carry on business under a system in which all circulation must be covered by a deposit of government bonds, no one can help feeling that a period of embarrassment is before us, as a community, more trying, more provocative of ruin and distress, than any crisis through which this country has ever passed. Ontario has the greatest interest in this matter, and it will not be well for the Government of the Dominion to gall the shoulders of a Province which has, and will have, to bear an unequal share of our national burdens. It is folly to kill the goose that lays the golden eggs. But while it is possible to beget grievances in Ontario which may lead many to despair of Confederation, it is equally possible to add fuel to the flame of repeal in Nova Scotia. That Province has enjoyed its present banking system for thirty years without the failure of a single bank. All the bankers of Nova Scotia have protested in the most earnest manner against change; and it certainly is not politic, in the present state of affairs there, to alienate men who wield such influence as these bankers do.

It is not a question of party politics. Those most opposed to the Government scheme are supporters of the Government. The bankers' Ottawa meeting was attended by such men as Messrs. Simpson, Benson, McMaster and Gibbs, all in the Government ranks; and we understand that among the opponents of a fundamental change will be found Hon. D. L. McPherson, Hon. G. W. Allan, and Messrs. Hillyard Cameron, Cartwright, Beaty, Harrison, and many others equally well disposed towards the Coalition. So that both inside the House and out of it the Government will find itself opposed by its warmest supporters; and we may rest assured that it will receive but little aid from its political enemies.

THE INSOLVENCY ACT.

Some petitions have been presented to the Legislature praying the repeal of the Insolvency Act altogether, and some praying its amendment. The Government measure consolidating the law on the subject and extending its operation to the various provinces of the Dominion, has been introduced. It is an improvement upon the old law, but we hope that, in its passage through the House, it will receive such amendments as will meet the wishes of the mercantile community. It deprives the debtor of power to choose an assignee, and makes the first step an assignment to one called the Interim Assignee, whose duty it will be to take possession, at once, of the debtor's property, and call a meeting of creditors. The Interim Assignee must be an Official Asignee of the county in which the debtor resides, or the Official Assignee of the nearest county. This prompt change of possession, of course, is intended to prevent that dissipation of effects which has too frequently characterised the period between the assignment and the first meeting of creditors. The creditors may continue the Interim Assignee or appoint an Assignee in his stead. When it is sought to compel liquidation, any one or more claimants may proceed in the manner that two or more could do under the old law. An additional ground for compelling assignment is where a trader sells or conveys the whole or the main part of his stock or assets, without the consent of his creditors and without satisfying their claims. At the first meeting of creditors, or afterwards, they may appoint Inspectors, from among themselves, whose services shall be gratuitous, and who shall superintend and direct the Assignee. Between meetings the Inspectors act for the creditors, but their directions are subject to revision by the subsequent meeting. Very full powers are given the Assignee to sell realty and personalty, to the best advantage. The remuneration of the Assignee shall be fixed by the creditors; if not fixed an amount may be allowed, not exceeding five per cent of the cash receipts, subject to appeal on the ground of excess or inadequacy. The Assignee's accounts are to be ready in one month after his appointment, and statements are to be furnished by him every three months. No lien is created by a *fi. fa.*, if before payment to plaintiff under it, an assignment is made or the estate is put in liquidation. Preferential sales or transfers of real as well as personal property are presumed fraudulent and void, whether to a creditor or otherwise. A deed of composition and discharge may be made in consideration of cash or credit, secured or or not, and the discharge contained in it may be absolute or conditional upon the payments

being made. Where a discharge is contested, if the evidence shows extravagance, recklessness in over-trading, or negligence in keeping books, continuing to trade unduly after the debtor believed himself insolvent, incurring debts without a reasonable expectation of paying them, the judge may order a suspension of the discharge for five years. This suspension may be also directed at the instance of a majority of the creditors, or the discharge may be made second-class. A very proper provision is made for the examination of the wife of the debtor touching the retention or concealment of his effects, and the Assignee is empowered to receive and open the insolvent's letters. Subpœnas to compel the attendance of witnesses may issue to any part of the Dominion. A discharge under a foreign bankrupt or insolvent law will be no defence to any action instituted in the Dominion for the recovery of a debt contracted within it. Very stringent provisions are introduced respecting the removing of property, not fully discovering it, not denouncing false claims, omitting property from the schedule, withholding books, falsifying books, stating fictitious losses, disposing of goods not paid for, and a three years imprisonment may be the penalty for such offences.

This bill is certainly an advance in the right direction, and the sooner it is passed the better, so as to secure the application of some of its wholesome provisions to parties who are now seeking discharges.

THE JACQUES CARTIER BANK.

The President of this bank has followed the example of the Vice-President of the Royal Canadiian. This almost simultaneous outbreak has something extraordinary about it. At a time when all banks and their officer should pull together we find a President in the east and a Vice-President in the west pricked into unwonted activity. Mr. Beaudry is the twin of Mr. McDonald. For several years past a sum of a thousand dollars has been voted to the President for his services, but in December last nothing was voted to him, though two thousand dollars were voted for distribution among the Directors. On the 14th April last, the President went to the Directors meeting and charged the cashier with allowing a firm in which his (the Cashier's) brother was a partner to overdraw their account. The Directors took the matter up and afterwards on the 15th April, addressed the Cashier as follows :

Sir,—The undersigned Directors of the Jacques Cartier Bank, feel obliged by these presents to express our lively regret at the excessively disagreable scene which took place at our meeting. We also beg you to believe that we repudiate in the most energetic manner, the conduct of the President towards you. We consider that conduct was altogether improper and insulting not only to you in whom we have always had unlimited confidence which we know to be deserved, but to ourselves ; and we seize this occasion to censure in the most distinct manner, the conduct of the President in our regard, since the general meeting of shareholders of the Bank held on the 17th December last. And. Lapierre, R. Trudeau, L. J. Beliveau, P. M. Galarneau, V. Hudson, C. S. Rodier, Louis Boyer.

This was followed by the adoption of the following resolution by the Board :

Proposed by Mr. Victor Hudson, seconded by Chas. S. Rodier,

In as much as the Honorable Jean Louis Beaudry one of the Directors of the Jacques Cartier Bank and President of the said Bank, has been guilty of grave neglect toward this institution by failing in his duties as such Director and President, and this during a long period of time, and notably as he has failed to be present at the meetings of the Directors of the said Bank from the 19th December last, when he was unanimously elected to the charge of President, until the 10th April instant, inclusively, the meetings of Directors having taken place twice a week during that period, that it is resolved that it is now the duty of the Directors of the said Bank to request the said Jean Louis Beudry to resign his said charges of Director and President, and that the Cashier of this Bank shall transmit to him, without delay, a copy of the present resolution.

The President replied to this declining to acquiesce in the demand because he was elected a director by the shareholders.

Report on the Waverly Gold District, with maps and sections; by Henry Youle Hind, M.A., F. R. G. S. Charles Annand, Halifax, N. S.

We should have acknowledged the receipt of this work from the author some time since. It is an extensive report made under instructions from the Commissioner of Public Works and Mines, and contains, besides all the details of interest relating to the particular district in question, a good many valuable suggestions of a general character on gold mining in Nova Scotia, which should be read by everyone in that Province who is directly interested in mining operations.

—The Canada Life Assurance Co., has increased its deposit with the government to $50,000.

—The last rail of the Pacific Railway was laid on the 10th inst., near Ogden, Utah Territory, by the President of the Central Pacific Company.

LONDON CORRESPONDENCE.

(From a Correspondent).

London, April 22, 1869.

The discussion as to the merits of Mr. Lowe's Budget has taken an unusually wide range. Not only have the House of Commons and the press of England debated and commented on its provisions; but the press of foreign countries has also given special attention to it. Two journals, the one being a great commercial authority in Germany, the other numbering among its contributors the most eminent political economists of France, have recently passed judgment on Mr. Lowe as a financier. By the *Hamburgher Borsen Halle* it is said that the Budget teaches a lesson to Europe, inasmuch as it provides for paying all the expenses of the Abyssinian Expidition without having to resort to a loan, yet provides also for the remission of several millions of taxation. It is added that other nations may well envy this state of things. The *Journal des Debats*, on the other hand, finds nothing to praise in the scheme propounded by our Chancellor of the Exchequer. With the fondness of Frenchmen for claiming t merit of originating everything, the writer, Loen, lays claim for France the merit of teachi Mr. Lowe a lesson by which he has profited. has done nothing more, it is said, than copy t plan which the late M. Fould adopted when was finance minister of France. As the subj has attracted so much notice, is so important itself, and may be misunderstood by those of yo readers who peruse the European Journals, a f words of explanation cannot be considered out place. Now, the Budget of Mr. Lowe has more relation to the financial arrangement of a other country than it has to the financial arrang ment which may be proposed by the responsi keeper of the Moon. In order to meet a defic the late M. Fould resorted to the expedient altering the day on which the interest was pa to the national creditor. By this means, he w enabled to show that within a particular twel months the expenditure would not exceed t revenue. What Mr. Lowe proposes is that cert taxes which heretofore have been paid a year aft date, shall be paid immediately after they a levied. It has been the custom to give a yea credit to many English tax-payers. This b arrangement has not been extended to Scotlan and there no change will be made. Of cou it seems hard when a butcher who has nev called for payment till a year has elapsed, su denly tells his customers that they must p ready money. In like manner. some tax-paye will object to the introduction of prompt pa ment. Still, there can be no doubt that t State will be in every way the gainer by t introduction of a practice which is based common sense. But the hardship is not so gre as it appears to be. For, while a year's assess taxes are to be called for at once on the first next January, no taxes of the same class are to paid during the preceding nine months. Th differs from the scheme of M. Fould. All th he desired was to stave off the evil day on whi a loan would have to be contracted in order to f up the inevitable deficit. But the difference greater still. M. Fould, and other French Mi isters of Finance, have never concerned the selves about the repeal of taxes. This is M Lowe's chief aim. If he subjects a few perso to an apparent hardship, he confers on the cou try a substantial boon. One of the taxes on fo is to be repealed; an oppressive tax on locomoti is to be repealed also, while prudence is no lon to pay dues to the State where houses or g are insured against fire. There are not wanti objectors to this or that item; but the gener feeling is in favor of the Budget as a whole. It as a whole that it must either be approved rejected. Of its rejection there is no danger.

If the German paper to which I have referr had thought only of the interests of some Germ companies, it would not have written so eulogi tically of the Budget. That provision whi gives the greatest satisfaction, the repeal of t duty on fire insurance, will interfere with t business of some German insurance companie These companies have done a good deal of bus ness here. The rates they could offer were course much more favourable to insurers th were the rates of companies in England. Indee the competition was unfairly conducted. T this, however, there will be an end next Jun After that date the custom of insuring again fire will doubtless become as general here as it in Germany. There, hardly a house is uninsure Here, it is the exception, for the houses or t furniture of the poorer classes to be secure against risk. It is not that the workman grud the few shillings of premium which he has to p yearly, but that he grudges the proportion of which constitutes the tax. Experience in th matter ought to prove useful to those who adv cate the substitution of direct and indirect tax tion. There is no doubt about direct taxatio being the simplest, fairest and most remunerativ method of raising the national revenue. B

the difficulty lies in convincing persons of this, or rather in putting the theory into practice. As soon as the population of any country becomes alive to its own interest it will approve of the imposition of direct taxes. But then, notwithstanding the saying that every man is the best judge of his own interest, much education is required to teach a body of men to submit cheerfully to do that which will benefit them collectively and individually.

There is still a marked perplexity in the public mind as to what should be done to guard the holders of policies of assurance from being deceived and robbed. A great disinclination is manifested towards measures designed to take care of the public by regulating the proceedings of the insurance companies. It is argued that the interference of the Government will foster instead of preventing swindling, inasmuch as the worst companies will be careful to comply outwardly with the rules while disregarding them in essentials. Perhaps the most certain remedy will be found in the plan about to be adopted with regard to policies for small sums to be issued by the Government. This is an extension of the Government Savings Bank arrangement, from which great results are anticipated. As it is the poorer classes who now suffer the most, and for whom this method of assuring is framed, the evil most complained of must be materially abated.

The most notable circumstance connected with the Money Market is the continued demand for the securities of the United States. The 5-20 bonds have become a favorite investment both here and on the Continent. It is estimated that £200,000,000 of United States securities are now held in Europe. This is but a guess, the truth may be less startling. Nevertheless, it is a fact beyond dispute that the amount of these securities in European hands is enormous. Since the practical assurance was given that the 5-20 bonds would be paid in gold their popularity has increased. They have the two-fold advantage of offering to the public a safe and a remunerative investment. Certainly they are much better worth buying than are the bonds of Russia, that great ally of America. Doubts are now cast on the safety of Russian securities. The feeling that Russia will always pay her debts in full is less strong than it was. It was held that because that power regularly paid the interest on her debt during the Crimean campaign, therefore she would never prove a defaulter. The logic of this is not unassailable. It was the interest of Russia at that time to be scrupulous in meeting her obligations. That the policy of honesty proves to be successful is evinced by this, that since then she has been able to borrow £100,000,000 from us. I do not think that she will get much more.

(From a Correspondent.)

LONDON, 29th April, 1869.

As a contribution to the elucidation of the "Bank Charter Question," which you have discussed in a series of leading articles, let me supply some details concerning the methods of banking in operation throughout the United Kingdom. It is one of the many anomalies which vex the philosopher that England, Scotland and Ireland should not have a uniform system of banking, and that even the system prevailing in London should differ from that of England generally. It is true that Sir Robert Peel legislated for each of these countries, so that all are substantially governed by the same principles of finance, yet differences in practice are none the less very marked and significant. For example, if an English landowner wishes an advance from his banker, he deposits his title deeds as security. If a gentleman who possesses no land and is not in business wishes an advance, he may get it on handing over securities, such as railway or other shares, or government stock. But in Scotland it is possible to get an advance without depositing title deeds or producing securities. It is enough if the borrower gets sureties who will vouch for him. Thus the Scotch method conduces to the developement of credit in its personal sense. The danger is that the absence of a material guarantee increases the risk run by the banker. But then this risk is not so great as it appears. For Scotland being a small country, the whole population is less than that of London, the knowledge of individuals affairs is more complete there than it could be in a larger and more populous country. This fact is often lost sight of when comparing the Scotch banking system with that of England or of other countries. At present there is a controversy in progress here, regarding the limits within which bankers ought to confine their operations. It would appear that some of the Australian banks have engaged in dealings in wool. It is asked if this is legitimate business? There is no reason why a banker should not trade in all kinds of commodities. Indeed, some merchants habitually act as bankers. But then it ought to be understood by the shareholders that when a bank departs from the line generally followed, and ceasing to take charge of the money of its customers exclusively, competes with these customers in any department of business, that the risks are increased. In a company formed for the purpose of combining mercantile operations with banking transactions, the shareholders know what they may expect. But they are misled when the company which was formed to deal with money is converted into a trading concern. The deception is nearly as complete and improper where a bank or the State attempts, under the guise of increasing the currency, to fabricate money. Your remarks on this head are alike just and indisputable. But the fallacies you expose are by no means powerless for evil. They are not without influence here. Attempts are frequently made to alter the English banking system, on the ground that it is antiquated and unsuited for the wants of the age. It is supposed that the restrictions imposed on the issue of bank notes are artificial barriers to the acquisition of wealth. No doubt if there were more paper money there would be more speculation, and this would be considered by the unreflecting as a revival of trade. But this would in reality be as little evidence of prosperity as the huge bulk of a dropsical patient is a proof of fat. Your Dominion notes may, for a time and within a limited area, be equal to gold, not by legislative enactment only, but in actual fact. But the number of these notes must be small. Some of the notes of the Bank of England are issued on the security of national credit, that is they represent a portion of the country's debt. No one doubts that these can be redeemed. As for those issued in excess of this amount, they are covered by bullion deposited while they are in circulation. When this bullion is withdrawn from the bank cellars these notes are cancelled. Hence it is that not only is every one in England ready to take a note for five pounds, with as much confidence as he would take the like amount in sovereigns, but these notes are held to be equivalent to bullion in every quarter of the globe where the name of England is known. If the case were reversed and the issue of notes entirely based on the deposit of government securities, then it would be impossible for the foreigner to tell whether the Bank of England notes represented the whole or only the half of the sum marked on its face. If again the old system were in force here, as it now is in France, and the notes being payable in gold on demand were issued at the discretion of the bank directors, then, when a panic came, the bank would be compelled to suspend payment, or else sacrifice enormous sums in order to purchase bullion wherewith to ride over the crisis. It is a significant commentary on the two systems that whereas a Bank of England note is readily taken in France at par, a French note cannot be cashed here save at a money-changers. The weakest point in our system is due to the manner in which it has been worked. More than once the operation of the Act of 1844 has been suspended, and notes issued without their places being supplied by bullion. It is true that the relief thereby caused was beneficial to many persons. Firms on the brink of insolvency were enabled to get their bills discounted. But it would have been better had those who brought about the crisis through over trading and rash speculation, suffered the consequences of their folly. The State is not bound to foster gamblers in merchandise any more than it is justified in encouraging gambling in money. An unlimited issue of paper money is simply an incentive to speculation and a discouragement to prudence.

However sound the banking system of this country may be, it cannot be said that English capitalists always display good sense when investing their savings. The readiness with which they lend money to foreign governments is astounding. A calculation has been made to the effect that the amount of English capital invested in foreign stocks is £400,000,000, on which the annual interest received, when interest is paid, amounts to £20,000,000. The temptation offered is a high rate of interest. It is doubtful, however, whether the same sum invested in the funds would not, on the whole, prove more remunerative, whether it would not be wiser to be certain of receiving three per cent. than hopeful about receiving more. Before long many will probably regret their credulity. There are tokens that the borrowings of Russia, Turkey, and Spain are becoming exhausted. Now, when these countries can no longer borrow, they must repudiate their obligations. This admits of no dispute. Given a permanent deficit, bankruptcy or repudiation is a mere question of time. Spain has just offered 10¾ per cent. return to subscribers to a new loan, and has had great difficulty in getting money on these onerous terms. Russia will soon have to bid as high for the money she requires. In a few weeks Turkey will beg for £16,000,000, wherewith to accomplish a grand financial reform; in other words pay off the arrears of the obligations she has incurred and cannot meet. When an end is put to these things, the ground will be cleared for those who can offer a fair percentage in return for the surplus capital of those who desire that interest should be punctually paid, while the principal is secure.

Among the emigrants who have recently sailed from this country to America, a band of sixteen merit attention. They are members of a "Mutual Colonization and Co-operative Emigration Land Company," formed here about six months ago, by some working men. The Society numbers 300, the majority of whom are skilled artizans. A large tract of land has been bought by the Company, for a merely nominal price, in Nebraska. The expenses of each emigrant are defrayed out of the common fund. As the Company is registered under the Friendly Societies Act, due provision is made against differences of opinion among individuals, the whole being subject to a code of rules having a legal sanction. If the reports sent home by the first sixteen are favorable, others will follow. The movement has this in its favor, that it gives to each man the advantage of combined capital, while it preserves the independence of each. The drawback of eleemosynary aid to emigrants is that the man who has once been the recipient of pecuniary help is apt, when things go ill with him, to look to others for further assistance. It is a pity that the working men did not make a happier choice. There are better places on the American Continent than Nebraska. However, the experiment is none the less worthy of notice. Should it succeed, there will be many repetitions of it on a larger scale, and under more favorable circumstances.

—In referring to the Eureka mine, in our Mining Review last week, the words "best crushing" were put for "last crushing," making an important difference in the sense.

Financial.

TORONTO STOCK MARKET.

(Reported by Pellatt & Osler, Brokers.)

The stock market has been very inactive during the past week, and with one or two exceptions the business done has been unimportant.

Bank Stock.—Montreal has further advanced, sales having been made during the week from 152 to 156, there are no sellers now under 157. Buyers offer 104½ for British, with sellers at 105½. Sales of Ontario were made during the week at 100¼, 100½ and 101; there are now sellers at the latter rate. There are small amounts of Toronto offering at 118½. Royal Canadian shows a marked improvement on last week's quotations; buyers rapidly advanced rates and sales were made at 75; there were buyers at the close at 70 and sellers at 75. Commerce is in demand at 102½ at which rate there have been sales. Small sales of Merchant's were made at 107 and 107½, none now on market under 107¾. Buyers offer 103½ for Quebec, no sellers. Molson's has been sold at 108 to 108½, little in market. City declined in the begining of the week but has since advanced, closing with buyers at 102. Du Peuple sold at 108 and 108½. No Nationale offering, there are buyers at 104 ex dividend. For Jacques Cartier 109½ would be paid, sellers asking 110. Mechanics' could be placed at 93½ with sellers at 94. Union has been sold at 106½ and 106¾. Other banks nominal.

Debentures.—Canada are heavy at quotations. Dominion Stock and Bonds are in demand at 107 to 108. Toronto would be content to pay 7 per cent., very little in market. Not much demand for County.

Sundries.—City Gas is offered at 107½. Small sales of Canada Permanent Building Society were made at 125, 125½ and 126, and of Western Canada B. S. at 120½ to 121, small amounts of this stock still procurable at the latter rate; Freehold closed firmer at 112½, with sales at 112 to 112½. Buyers offer 134 for Montreal Telegraph and sellers ask 134½. Mortgages have been largely dealt in, first class can be readily placed at 8 per cent. Money is in demand and higher rates are paid.

THE BRITISH COINAGE.

The weight of gold is expressed in this country in ounces troy and decimal parts of an ounce, and the metal is always taken to be of standard fineness (11 gold and 1 alloy) unless otherwise described. The degree of fineness of gold, as ascertained by assay, is expressed decimally, fine pure gold being taken as unity, or 1·000. Thus gold of British standard is said to be 0·9166th fine, of French standard 0·900 fine. Another method of expressing fineness is still in pretty general use, founded on an ideal pound, "the carat pound," which is divided into 24 parts, called carats. When the gold is entirely fine, it is said to be gold of 24 carats. British standard gold contains two carats of alloy, and is said, therefore, to be gold of 22 carats. Jewellery gold may be of 22, 18, 15, 12, or 9 carats fine. The legal weight of the sovereign is 0·2568 ounce of standard gold, or 123·274 grains. The weight came from one pound of standard gold, 5,760 grains being coined into 44½ guineas. Sovereigns are legal tender to any amount, provided that the weight of each does not fall below 122·5 grains, or in the case of a half-sovereign, 61·125 grains; these are the "least current" weights of the coins. One pound troy of standard silver is coined into 66 shillings, of which the metal is worth from 60s. to 62s., according to the market price of silver. The standard fineness of silver is 0·925, three alloy in 40. The fineness of the French standard silver is 0·900 in the five-franc piece, but an inferior alloy of 0·835 is used for the lower denominations. The single five-france piece, composed of the latter alloy, is still made to weigh five grains, the weight originally chosen for the franc, as the unit of the monetary scale when the fineness of the coin was 0·900. It has now become a token, like the British shilling, of which the nominal value exceeds the metallic value. The material of our copper coinage is now a bronze mixture, composed in 100 parts by weight of 95 copper, four tin, and one zinc, the same as in the copper coinage of France. The penny is coined at the rate of 48 pence in one pound avoirdupois, of 7,000 grains, or 453·59 grains; the half-penny at 80 in the pound avoirdupois, and the farthing at 160. British silver coins are a legal tender in payments to the amount of 40s. only; copper pence to the amount of 1s.; half-pence and farthings to the amount of 6d.—*Produce Markets Review.*

A Singular Scheme—Traffic in Shares.—Mr. S. Finney, manager of the English Joint Stock Bank, which suspended in 1866, was arrested and brought before the Lord Mayor of London. Some interesting facts were brought to light on that occasion. This Bank had £100,000 paid up capital. The promoters received £6000 between them. The directors were to receive, by the articles of association, £3,000 a year for the management of the business, which they were to divide among themselves; and whenever the company should declare a dividend exceeding £6 per cent., and below £8 per cent., they were to receive an additional £1,000, and a further sum of £1,000 for every £2 per cent. of the dividend above 8 per cent. The prisoner had been the general manager from the first, at a salary of £1,200, which was to be raised to £1,500, in the event of the dividend reaching 6 per cent. As might have been expected from such an arrangement a fraudulent dividend was soon declared. During the trial of Mr. Finney, the Lord Mayor said: "It has been laid down as the law of this country, by the highest authority, that if the directors of a company trafficked in its shares, even for the purpose of maintaining its credit, that was a fraud."

Mining.

GOLD MINING IN QUEBEC.

The following extracts from reports of the gold mining inspector of the Province of Quebec for the 18 months ended 31st December, 1869, will be found of interest.

4th January, 1868. At Jersey Point, near the Strafford stream, a Mr. Maynard, of Boston, United States, had a number of men employed in June and July, 1867, in cutting a tunnel so as to traverse several of the quartz veins, which at this spot intersect his property. This tunnel is about six feet wide, 150 feet long and seven feet high, and well timbered and secured. Portions of the quartz taken from some of these veins, have been assayed by Professor Hayes, of Boston, and are said to have yielded from $11 to $19 to the ton. Professor Hind examined this property in August last, and has published a Report speaking in very favorable terms of it. On the Famine River a number of men prospected during a portion of the summer, and have located claims which they intend to work early in the spring, and anticipate rich results therefrom. On the Gilbert River, mining was carried on more actively during the latter half of the past year than at any previous period, and the work was more effectively and scientifically prosecuted. A great number of shafts have been sunk, and are being worked on this river, on lots 14, 15, 16, 17, 18 and 19, in the De Lery Concession of the Seigniory Rigaud Vaudreuil, and some of them have richly rewarded the labor employed. One of these shafts, known as McRae's shaft, on lot 15, sunk in the latter part of July, and worked by about ten men, yielded by the 1st October, being about 60 days labor 334, ounces of gold, or $6,000, making an average of $10 per day, per man. Since October, a lar quantity of pay dirt has been hoisted from this sh preparatory to its being washed, in spring, a it is expected will prove as rich as that which l already been washed. On lots 7 and 8 in this c cession, a Mr. Lockwood, representing an Engl company, has a number of men employed making preparations for carrying on mining ope tions on a large scale in the spring. On t Riviere des Plantes, in this Seigniory, a Mr. N of New York, had a number of men employed prospecting for alluvial gold, but the results so have not proved sufficiently encouraging to just him in continuing further operations for the p sent. Professor Hind was engaged for three four months during the summer, in making a g logical survey of certain portions of this Seigni at the instance of the De Lery Gold Mining Co pany, and his report, though not yet published, I am told, very favorable and encouraging. M sieur Michael was engaged for about three mont during the summer, on behalf of a Mining Co pany, in prospecting a portion of the Parish St. Joseph, adjoining this Seigniory. His Rep has not yet been published, but I am led to beli the results of his preliminary operations, so f have not been very encouraging. The De Le Gold Mining Company had parties of men employ during the summer, prospecting in various p tions of the Seigniory, preparatory to laying mining claims. This Company is now maki arrangements for letting out large mining lots claims to companies and capitalists with a view an extensive development, during the ensui year, of the rich alluvial deposits which the Sei niory, undoubtedly contains; and it is also maki arrangements for the development of some of t auriferous quartz veins by which the Seigniory reticulated. It is therefore confidently anti pated that both alluvial and quartz mining will carried on in the Seigniory on an extensive sc during the ensuing year. This Company's mill in excellent order, works admirably, and l tested surface specimens of the quartz veins whi have been uncapped in the Seigniory, with suffi ently encouraging indications to justify the h that some of these veins will prove to be ri About 100 men have been daily employed, on average, throughout the year, either actually mi ing or engaged in preliminary mining labor. is impossible for me to give exact returns of t amount of gold taken out during the year, mining was almost exclusively confined to t Seigniory Rigaud Vaudreuil, and was carried by persons who, up to the month of July la were not acting under the De Lery Company, a from whom I could not exact license fees, or e force statements upon oath as to the amount gold taken out, as the Gold Mining Act giving r this power in all other parts of the Gold Mini Division, does not extend to this Seigniory. July last an agreement was made by the Recip city Mining Company, under which these perso were mining with the De Lery Company, where the right to the gold in the Seigniory was adm ted to belong to the latter Company, in virtue Letters Patent, and a per centage on all go taken out was agreed to be paid to the De Le Company, whereby, in virtue of the memorandu of agreement between this Company and t Government of the 11th May, 1866, all tho persons so mining became liable to the payme of license fees, and since that period the retur of gold taken out by them are probably mo accurate.

From the most reliable date I can obtain, estimate the amount of gold taken out of t Division during the year, to be, in round figure $31,000 of which about $9,000 were taken out the first half of the year, and about $22,000 in t latter half. Of this amount about $30,000 we taken out of lots 15, 16, 17, 18 and 19 in t De Lery Concession of the Seigniory Riga Vaudreuil, and the remaining $1,000, from Jers Point, the Strafford Stream, Famine Branch, an the Des Plantes Rivers.

I issued 164 Private Lands Gold Licences and vo Mill Licenees during the year, amounting to ıe sum of $272.

10th April, 1868.—Alluvial mining was actively ırried on, during the quarter ending the 31st larch, 1868, on lots 14, 15, 16 and 17 in the De ery Coneession of the Seigniory Rigaud Vaud-uil. Owing to the mild weather and heavy ıaws which took place towards the latter end of larch, and the consequent excessive flow of water ı some of the shafts, mining was discontinued ıerein, and will not be resumed until after the ring thaws—probably about the end of the pre-nt month of April. Miniug was confined during ie quarter principally to hoisting the pay-dirt ıt of the shafts and placing it on the surface for ıe better eonvenience of sluicing in the spring, hereby the costly and inefficient method of wash-g in the shafts by rockers—necessary in winter, as in great measure avoided, claim holders who ıd the means to work their shafts did not wash ; all and those who washed, did so merely to btain sufficient gold to pay their laborers. The sults of these washings have been in most cases tisfactory and encouraging, and in some in-ances rich and highly renumerative. In a shaft unk on lot 15, the owners only washed for about ree or four hours once, and sometimes, twice, a eek, by means of a common rocker at the bottom the shaft, and even by this expensive incon-enient and imperfect mode of washing; they btained from 7 to 13 ounces of gold each washing. he yield of gold obtained from this shaft alone uring the quarter is 200 oz. 8 dwts. 12 grs.

The total yield from all the various shafts is as llows :—

	oz.	dwt.	grs.
January,.....	64	1	4
February	181	16	8
March,.....	57	3	11

Making a total for the quarter of 303 oz. 0 dwt. grs. An immense quantity of wash dirt has en hoisted from the various shafts, which will washed as soon as the spring thaws permit, hich is expeeted to be about the later end of pril, from which a large yield of gold aud rich sults are confidently anticipated. About 150 en have been employed in mining, and in pre-minary mining labor, such as felling and draw-g timber for timbering the shafts, making sluice xes, &c. Preparations are in progress for rrying on the mining operations on an extensive le during the present year. A Mr. Nash, and her American gentlemen associated with him, ıo are lessees of large mining claims from the Lery Gold Mining Company, and the owners two of the best paying shafts that are worked rc, are making preparation for extending their erations upon an enlarged scale. A Mr. Lock-od, representing an English company has sed a large mining claim from the De Lery ld Mining Company, and intends to work the ne upon an extensive basis. Capt. Smith, of w York, has erected a steam pump on his shaft th a view to facilitate and expedite his mining rk, and supersede the necessity of manual or in emptying and keeping the water out of shaft. A number of experienced miners in-d in the spring to prospect along the banks of mine River, in the township of Watford, and od results are expected from their skill and ex-ience in mining.

Little was done during the quarter, in quartz ning.

Specimens of quartz were collected from some the uncapped veins in the Seigniory and for-rded to New York for assay, but with what ult I have not yet learnt.

A Company has been been formed, eomposed of ebec gentlemen, who intend to import a port-e "arastra" for the purpose of testing the ious quartz veins which have been opened in the gniory. The De Lery Gold Mining Company, m informed, will give a new impetus to both rtz and alluvial mining enterprise in the Seig-niory, by the favorable terms which, I believe, it has determined to adopt with regard to capitalists and miners for the development of the rich auri-ferious deposits which the Seigniory undoubtedly contains. I issued 111 licenses during the quarter.

1st July.—Alluvial mining has steadily pro-gressed in this division during the quarter ending on the 30th June.

In the Seigniory of Rigaud Vaudreuil several additional shafts have been sunk on lots 10, 12, 13, 14, 15, 16 and 17 in the De Lery Concession, and on lot 8 in the St. Charles Concession. In most of these new shafts the bed-rock or bottom has not yet been reached, owing to excess of water. To obviate this difficulty steam-pumps have been imported from England and the United States, four of which are now in the course of erection, by means of which it is expected the shafts will be speedily emptied, and the bed-rock reached. An English Company called the Canada and North West Land and Mining Company. is carrying on extensive mining operations in this Seigniory. and has sunk several of the new shafts above adverted to. The De Lery Gold Mining Company has recently let large mining claims in different localities, on the 1st Range N. W. of the Seigniory, which are to be prospected and worked during the present season. The amount of gold obtained during the quarter, is 452 oz 12 dwts. 7 grains. The mint value of this gold varies from $17.80 to $18.05 per ounce ; thus making in round figures the sum of $8,100. A number of experienced miners, taking advantage of the recent dry weather have gone off prospecting in Forsyth, Shenely, Liniere, and other places in the Division, and hopes are entertained that they will succeed in finding rich locations.

I have issued 293 licenses during the quarter, amounting to $293.

14th October.—Alluvial mining was not so profitable during the quarter ending on the 30th September, as during the preceding quarter. A number of the shafts adverted to in my last report particularly those on lots 12, 13 and 14 in the De Lery Concession of the Seigniory Rigaud Vaud-reuil were abandoned, some owing to excess of water, and there being no means on the spot to combat against it, others owing to their comparatively barren appearance. The weather, too, during the quarter, was unfavorable to mining operations,—the long continued drought rendered sluicing, and even rocking almost impossible, and when the rain did set in, during the month just ended, there was too much of it to enable the miners to reach the bottom of most of the shafts then opened, without expensive appliances which were not then at haud. On lots, 15, 16 and 17, mining was carried on more vigorously and profit-ably, though in some instances the results obtained although comparatively good, fell short of the outlay, owing to the heavy expenses and costly appliances used. The North West Land and Mining Company has an engine in operation on lot 15, connected with a pump, for bailing the water out of the shaft, which was imported from England at the cost of $6,000. There are also two smaller engines and pumps in operation on other shafts. The amount of gold taken out during the quarter is 336 oz. 17 dwts. 12 grs. In quartz mining, operations have been more actively and extensively carried on during the quarter, than at any previous period. Several companies are at work getting out quartz, from different veins in the Seigniory, and are having it carted to the mill of the De Lery Company to be crushed and tested. This mill has been in full operation for some weeks past, under the superin-tendence of a mining engineer employed by the De Lery Company, and the results are looked forward to with confident assurance of good success. Speci-mens of all these veins have been treated theoreti-cally, and yielded rich results—in one case amounting to the rate of $133 to the ton, while all have shown traces of gold.

I issued 303 licenses during the quarter, amount-ing to $303.

9th January, 1869.—Alluvial mining was carried on in the Seigniory Rigaud Vaudreuil, on lots 14, 15, 16, 17, 18 and 19 during quarter ending on the 31st December, 1869, with comparatively good results, although mining was carried on less actively than during the preceeding quarter, owiug to the great depth of some of the shafts, which, in some cases, are from 60 to 75 feet be-neath the surface, thereby necessitating expensive machinery, consisting of steam engines with pumps attached thereto, for the purpose of hoisting the water and pay-dirt therefrom. Some of these shafts barely paid expenses, while others yielded rich results.

In other parts of the Seigniory, at the St. George and Jersey Point. a considerable amount of prospecting was carried on with variable re-sults. The amount of gold taken out during the quarter is 324 oz. 16 dwts. 22 grs. In quartz mining a good deal of work was done, and a con-siderable quantity of ore extracted from several of the veins in the Seigniory. A few tons of ore from some of these veins were passed through the De Lery Company's Crushing Mill and gave more or less good traces of gold. This mill has been temporarily closed,

I issued 154 private licenses, and two monthly mill licenses up to the 21st December.

PROXIES.

Nothing but abuses arise, as a general thing, from the use of proxies. This does not necessarily follow, but, as we say, generally. Proxies are for the most part obtained for selfish, and often for vile purposes, and the worst species of tyranny, and the foulest prostitution of authority are the result of their misuse. The bold robberies, and high-handed swindling practiced in Wall street are accomplished by proxies. The rich villains whose names appear daily in the daily papers, have amassed their wealth by the most gigantic species of fraud wrought by the abuse of proxies. Stock-holders have been robbed, scoundrels enriched, and the public sense outraged by the adroit man-ipulations of proxies. They are the means of per-petuating wrong, if wrong exists, and the means of developing wrong, if bad men are so disposed. Any set of officers can make themselves a self-per-petuating oligarchy, by voting themselves in through the use of proxies. There is no limit to the abuse, provided proxies can be secured; and it is a most shameful state of things that they can be secured, usually by the mere asking, and always for pay. One man can often clandestinely secure proxies enough to carry in his own person the determination of offices for an entire corporation. He can come in, and to the astonishment of all honest persons, eject the ruling powers, constitute himself chief, and put his own hangers on in the subordinate places. This has been done often, and attempts of this sort are not unknown in life insurance annals. Some dissatisfied official may aspire to the Presidency, and reach it, too, by the vile use of proxies- Influential agents, with vast territories under control, may secure proxies enough to revolutionize any of our city companies. Power is attained in this way, and almost always in order to be abused, There is nothing more scandalous in the management of corporations than this system of proxies, which is now so common. It is an allurement to evil, doing, and offers a premium on the practice of dishonesty and fraud. It is of itself a revolutionary system. It carries rebellion in its face, as the flint carries fire.

Many an unworthy line of officers have made themselves secure for life in lucrative positions, because of the self-perpetuating principle inherent in proxies. Shrewd men can easily retain their places, because proxies are always easily obtained. And so long as the system is current and liable to be used by any one, officers can never feel secure against the machinations of evil-disposed persons, unless they are armed with the same sort of wea-pon as is employed by their adversaries. Hence

it is that nearly every election of officers of our life companies, and very likely, too, of many other corporations, is a farce, having no significance. There is not the slightest evidence that an officer is the choice of the body he represents, in the fact that he has been unanimously elected. All that follows is that the proxies have been secured in advance, used successfully, and that, fit or unfit, the incumbent will hold the position till some one picks up more proxies than he.

One reason why directors are in general inefficient, is due to the servility they manifest toward tht chief officers, who have the power to make or unmake them at pleasure. A director gets his ideas from his president. He espouses the side which will be popular with the reigning powers. He has no will of his own; he has no preferences till he is told to have them. He is called upon nominally for consultation, but really for his nod and assent to some proposition from the chief directory. The excuse given for this state of things on the part of directors is, that the officers know best what is best for the company, and it would be arroganee to make suggestions, and especially so to urge them. If that is so, why have any directors at all? If their office is merely nominal, why not abolish the sham, and make the ruling oligarchs irresponsible?

The law concerning proxies is one of the worst on the statute book. It gives legality to villany, licenses fraud, creates an irresponsible and self-perpetuating oligarchy, and has no redeeming feature whatever. It opens the highway to all sorts of evil, deprives elections of their significance or utility, and tends to weaken the public morals and the public faith. In no aspect is it useful or necessary. It is the tool of villains, the strong tower of designing and unscrupulous men, and should be obliterated from the books forthwith. The New York law on this subject is especially obnoxious, as there is no limit to the time that a proxy may continue. Therefore thousands of votes are cast, often determining elections, that were secured six or even twenty years ago, while the parties are unconscious that their franchise is used and abused, and have even forgotten that their proxy was ever intrusted to another.—*Insurance Times.*

Commercial.

While admitting the general inadvisability of exceptional legislation, there is at least, one article which now comes in free of duty, into the Dominion, that ought, under the circumstances, to pay its fair share of the revenue. We refer to hops. Hop growing which promised so favorably two years ago, is now in a sadly depressed condition, in fact, there is no market for hops in this country, except in a retail way. As the matter now stands a really choice article can be sold, but if anything less than number one they are simply "dead stock." Growers are quite digusted, as a rule. Hops are peculiarly liable to the attacks of insects, to the drought, to damage in curing, &c., and the experience this year has been that, when placed in the market, they cannot be sold.

Why is this? In the first place the demands of the market are limited; we can consume only so much and no more, whatever the price may be. When the season sets in the brewers always hold off, and will not buy except at *their* prices. If holders are firm importations of American and Belgian hops soon make their appearance, duty free, and replace the home-grown, which must then be exported if sold at all. But this cannot be done. Our hops can not be exported so as to take the place in other markets of those imported as above. The fact of importations into this country, proves that our market is better than New York; and hence how is it possible for our hops to pay the American duty and compete in the New York market? the thing is impossible.

The free-trade objection that we get hops cheaper on that account, might apply if hops were a neeeessity instead of a luxury. There is no good reason why we should pay a premium on beer-drinking.

As Mr. Rose said in his Budget Speech, "we "cannot go on this way for ever, the time may "come soon when we shall have a national policy "of our own, and that national policy will be "shaped solely by those considerations which "affect our own resources."

A duty on hops need not be deferred till the development of a "national policy." They are in every sense a proper subject for taxation; not one class or interest in the country that it is desirable to encourage would suffer by the change; a growing industry would thrive under the stimulus of fair play, and the revenue of the Dominion would be increased.

Toronto Market.

The weather of the past week has been favorable for business, which is, if any change, slightly improved.

Groceries.—There was a little more doing this week, prices unchanged.

Boots and Shoes.—Manufacturers continue busy; prices keep firm and steady.

Leather.—There is a fair trade doing at our quotations, which are for strictly wholesale lots.

Hides—are very dull; green have declined to 5½c; cured almost unsaleable at present.

Petroleum.—Trade is very flat at our quotations.

Produce.—*Wheat*—Receipts 21,680 bush. and 15,462 bush. last week. There is a little better demand for spring, and prices have improved somewhat; the market closed with buyers at 96c. to 97c.; about 3,000 to 4,000 bush. in all changed hands at 95c. to 96c. Fall is dull and offering at 98c.; no sales of consequence. Midge proof—some sales reported at 97c. f.o.b. *Barley*—No receipts; market dull, street buyers pay 85c. to 90c. *Oats*—Receipts 12,000 bush. against 500 bush. last week; the market advanced to 58c. and fell off closing at 55c.; sales of car loads were made at quotations. *Peas*—No receipts; market dull and nominal. *Corn*—Sales at 60c. by the carload. *Seeds*—Timothy scarce and advanced as quoted. Clover quiet, $5.25 to $5.75; flax $2 to $2.25.

Flour.—Receipts 1,550 brls. and 1,000 brls. last week. Superfine has met with a considerable demand; from 1,000 to 2,000 have changed hands at $4.05 to $4.10, the market closing with round lots offering at $4.05 without buyers. This is no doubt owing to the warm weather which has now commenced. Fancy—one or two lots sold at $4.20, and sales of choice were made at $4.25. Extra held at $4.50, without sales. *Oatmeal*—The best qualities are worth $5.50 to $5.75 for retail purposes. *Cornmeal*—Selling at $3.50.

Provisions.—Business is limited to the local demand. *Cutmeats.*—In consequence of the smallness of stocks of cutmeats our quotations are of retail character. *Butter*—is very dull; no lots moving. *Eggs*—Packers would not pay over 11½c to 12c. *Cheese.*—Scarce and selling for local use at quotations.

Freights.—The following charters have been made within the last four days:—Schr. Antelope, from Meaford to Kingston, 10,000 bush. spring wheat at 8c.; schr. Trade Wind, from Hamilton to Kingston, 10,000 bush. spring wheat at 2½c.; schr. Ocean Wave, from Toronto to Kingston, 6,000 bush. wheat at 2c.; a schooner left here for Owen Sound to take a cargo of wheat to Montreal at 11½c.; schr. J. G. Beard is now being loaded with wheat for Montreal; rate 11½c.

The Coming Harvest.

The scarcity of breadstuffs and consequent high prices which have remunerated agricultural labor and enterprise for the past six years, have stimulated the culture of wheat not only in this coun[try], but generally throughout the opposite contin[ent]. If favorable weather lends its aid to the effort[s] of the cultivator, there is reason to believe that [the] coming wheat harvest will prove heavy be[yond] any previous yield. At home the breadth [of] land prepared this year are greatly enlarged, [both] on the Pacific and Atlantic sides. Abroad, R[ussia] is extending her fields into immense areas, an[d so] make them practically available, so that t[heir] products may be brought cheaply to market, [she] is projecting railroads with a most liberal po[licy] into her best grain sections. France and Pr[ussia] are equally active, as well as Germany and I[re]land. Indeed, it would seem that the proba[bili]ties of a general war throughout Europe [have] stirred the nations to these extensive preparati[ons]. Should peace remain unbroken, plenty [will] pervade the earth; otherwise, with all the [evi]dences to which we have alluded, of a munifi[cent] Providence, want and destitution may stalk [over] the fairest lands of the globe.—*St. Louis Jou[rnal] of Commerce.*

Receipts of Grain.

The following will show the comparative r[e]ceipts of flour and grain at the ports of Milwau[kee], Chicago, Toledo, Detroit and Cleveland, f[rom] January 1 to May 1, for 1868 and 1869:

	1869.	1868.
Flour .....bbls	1,789,375	1,102,42[3]
Wheat.....bu	6,156,480	3,648,01[1]
Corn.....	8,922,627	9,238,5[22]
Oats.....	2,680,320	2,204,4[32]
Barley..	365,937	360,07[7]
Rye.....	432,525	160,41[1]

Insolvents.—The following insolvents h[ave] been gazetted during the week ending the 2[nd] April: Michael Dolan, William Kennedy, [of] Richardson Borradaile, Ottawa City; J. M. Jo[seph] & Co., Montreal; Austin & Werrett. Sim[coe] Whan & McLean, London; John Reynolds, I[s]ley township; Joshua Doty, Alymer vill[age] Ontario; Abram Lewis, Chatham; Thorne[ll] Richardson, Owen Sound; Salem Ruth, Newl[and] village; Lawrence Cohen, Montreal; A. D. C[am]eron, Hamilton; Dame Genevieve, Arniot, [et] cheres; J. & C. Chagnon, Dellarose, Verche[res]; Lawson Bros., Hamilton; Donald Park, Hib[bert] township; Andrew Park, do., John Fergu[son] Sunnidale; L. Elliot, Belleville; L. W. And[rew] Colborne; W. G. Strong, Colborne; Ro[bert] Young, Toronto; Dame Charlotte K. O'Gr[ady] Lennoxville; Pierre Bourdreaux, North H[am] Bernard Graham, Toronto; M. L. Vance, Ba[rr]ton; Thomas Gray, Toronto; John Hack[ett], Ingersoll; E. C. Lee, Chatham; Lewis Hou[se], Whitby; A. F. Martin, Whitby; O. C. Buchar[an], Guelph.

The following is a list of the new insolve[nts] Chas. Wilson, Montreal; Robert Jamieson, O[wen] Sound; J. Barber, Port Perry; D. Tier[ney], Smith's Falls; Thomas Lusignan, St. Ou[rs] Dougald McEwen, Lanark; B. B. Lecou[rt], Labre du Fabvre; W. Greenfield and Rol[ert] Moir, Blanshard; John White, St. Mar[y's], Napoleon; Jacques and Hector Lamontag[ne], Montreal; Westman, Toronto; P O'Br[ien], Belleville; Donald McKenzie late of Franeist[own], Goderich township; Thos. Writs of attachment are issued against McK[in]non, Woodstock, and Edward R. Lee, Chatha[m]

BESSEMER STEEL RAILS,—The *Iron and Coal Trades Review* refers to an important change about to occur in one branch of the iron business, from the termination of the Bessemer patents. The principal part of these patents expire next year, but Mr. Bessemer, it is said, has patented so many of the appliances, blowing engines, valves, and combinations, that he will have claims for royalties for several years after the lapse of the patents which are absolutely essential to the process with which his name is identified. It is understood, however, that after conferring with his leading licensees, he has signified his willingness to reduce his royalties from their present high rate of £2 per ton on everything (except steel rails, for which a rebate of 20s. per ton of finished rails is allowed), to a charge of 5s. 6d. per ton. This, it is added, will practically reduce the price of ordinary Bessemer steel £2 per ton, and rails about 30s. per ton, so that the manufacturers of iron rails have before them the prospect of seeing steel rails in the market at £9 per ton, in the course of another year or so. "The margin between iron and steel rails will then be so small that it is easy to see that a great impetus will be given to the steel rail trade, and should no difficulty be experienced in obtaining the necessary supplies of pig-iron suitable for conversion to Bessemer steel, it is hard to say how far the development of cheap steel will be carried.

EDINBURGH LIFE ASSURANCE COMPANY.

FOUNDED 1823.

AMOUNT OF ACCUMULATED AND INVESTED FUNDS—OVER ONE MILLION STERLING.
HEAD OFFICE—EDINBURGH.
PRESIDENT—The Rt. Hon. the Earl of Haddington. MANAGER—D. Maclagan, Esq. SECRETARY—Alex. H. Whytt, Esq.
CANADIAN OFFICE ESTABLISHED 1857. WELLINGTON STREET, TORONTO.
CANADIAN BOARD—Hon. John Hillyard Cameron, M.P., Chairman. J. W. Gamble, Esq., L. Moffatt, Esq., Hon. J. B. Robinson, C. J. Campbell, Esq. David Higgins, Secretary.

THE Edinburgh Life Assurance Company offer to the public the advantages of a Canadian as well as a British Company. They have invested a large amount of money on securities in this country, and the Toronto Local Board have full power, by an Imperial Statute, to take risks, make investments, and settle claims in Canada, without reference to the Head Office, Edinburgh. Some of the old Policies in the Company, which became claims during the past year, were settled by payment of amounts double of those originally insured, in consequence of the large bonuses that accrued on the Policies.
Every information that intending assurers may require can be obtained at the Company's Office in Toronto, or at any of the Agencies which have been established in the principal towns in Canada.

J. HILLYARD CAMERON, CHAIRMAN. (36-1y) DAVID HIGGINS, SECRETARY

Royal Fire & Life Insurance Company

OF LIVERPOOL AND LONDON.

CAPITAL, TWO MILLION STERLING,

WITH LARGE RESERVE FUNDS.

ANNUAL INCOME, - - - - - - - - - - £800,000 STG.

FIRE BRANCH.

Very moderate rates of Premium. Prompt and liberal settlement of losses. Loss and damage by explosion o gas made good. No charge for policies or transfers.

LIFE BRANCH.

The following are amongst the important advantages offered by this Company:
Perfect security to assurers. Moderate rates of premium. Large participation of profits—the bonuses being amongst the largest hitherto declared by any office, and divided every five years. EXEMPTION OF ASSURED FROM LIABILITY OF PARTNERSHIP. Claims settled promptly on proof of death. Liberal allowance for surrendered policies. Forfeiture of policy cannot take place from unintentional misstatement. No charge for policies or assignments. Medical fees paid by the Company. Tables and forms of application, with all other information, can be obtained on application to

FRANCIS H. HEWARD,

ANGLO-AMERICAN PEAT COMPANY.

CAPITAL, ... $200,000,

IN 8,000 SHARES—$25 EACH.

President—WM. EDGAR, Esq., Hamilton. Vice-President—ROBERT REFORD, Esq. (Messrs. Reford & Dillon), Montrea
Secretary-Treasurer—A. McK. COCHRANE, 388 St. Paul Street, Montreal.

THIS COMPANY, with machinery now in working order and in course of construction, will be able to manufacture this year FROM TEN TO TWELVE THOUSAND TON OF GOOD FUEL. Actual working shows—

I. That the fuel can be produced for $1.45 a ton, and with the improved machinery, at a much less cost.
II. That, for steam purposes, one ton of it is superior to one cord of wood, in the proportion of 31 t > 27.
III. That, for domestic purposes, it is equal to wood or coal, and leaves very little ashes—about five per cent.

At the annual meeting of the Company in Montreal, it was decided to offer one thousand shares of Stock in Toronto. Mr. Isaac C. Gilmor has been appointed agent of th Company in Toronto, and is authorized to receive subscriptions for the Stock.
Prospectus, Map of the Property, and further information may be obtained by addressing

ISAAC C. GILMOR, 58 Colborne Street, Toronto.

The Largest Mutual Life Insurance Company. Numbering Over 75,000 Members.

BEING A PURELY MUTUAL COMPANY ITS ASSETS BELONG EXCLUSIVELY TO ITS MEMBERS,

ASSETS, $21,000,000.—Aequired by prudent and economical management of twenty-two years, without the aid of a single dollar of original capital.
SURPLUS ASSETS, $6,361,967—All profits divided among the members. Each policy holder is a member. There are no stockholders.
ITS DIVIDENDS—Have averaged over 50 per cent. annually. Total amount of dividends paid the members since its organization, $4,397,142.
ITS SUCCESS UNPARALLELED—It has arrived at the extraordinary condition where the income from annual interest alone is more than sufficient to pay all the losses. Total amount of losses paid by the Company, $6,868,528.
ITS RESPONSIBILITY—For every $100 of liabilities it has $154 of assets.

LAST YEAR'S PROSPEROUS BUSINESS.

Amount insured fiscal year, 1867 .....$45,647,191 00 | Income received fiscal year, 1867.....$7,530,886 19

During its last fiscal year this Company paid to its living members, and to the families of deceased members, nearly $2,000,000, and at the same time added more than four millions to its accumulated capital.
The whole record of this Company has been one of prudent management and prosperous advancement. Among the older and leading Life Insurance Companies its average ratio of expenses to income has, through its entire history, been the lowest of any.
ITS LIBERALITY—It accommodates the insured by giving credit for part premium, and grants insurance to meet all the contingencies and wants to which Life Insurance is applicable.
It issues policies on a single life from $100 to $25,000.

MEDICAL REFEREES—J. WIDMER ROLPH, M.D.; H. H. WRIGHT, M.D.

LIFE ASSOCIATION OF SCOTLAND.

Invested Funds Upwards of £1,000,000 Sterling.

HIS Institution differs from other Life Offices, in that the BONUSES FROM PROFITS are applied on a special system for the Policy-holder's personal benefit and enjoyment during his own lifetime, with the option of large bonus additions to the sum assured. The Policy-holder thus obtains a large reduction of present outlay, or a provision for old age of a most important amount in one cash payment, or a life annuity, without any expense or outlay whatever beyond the ordinary Assurance premium for the Sum Assured, which remains intact for Policy-holders' heirs, or other purposes.

BRITANNIA LIFE ASSURANCE COMPANY.

Capital and Invested Funds.....£750,000 *Sterling.*

ANNUAL INCOME, £220,000 STG. :

Yearly increasing at the rate of £25,000 Sterling.

THE important and peculiar feature originally introduced by this Company, in applying the periodical Bonuses, so as to make Policies payable during life, without any higher rate of premiums being charged, has caused the success of the BRITON MEDICAL AND GENERAL to be almost unparalleled in the history of Life Assurance. *Life Policies on the Profit Scale become payable during the lifetime of the Assured, thus rendering a Policy of Assurance a means of subsistence in old age, as well as a protection for a family,* and a more valuable security to creditors in the event of early death; and effectually meeting the often urged objection, that persons do not themselves reap the benefit of their own prudence and forethought.

No extra charge made to members of Volunteer Corps for services within the British Provinces.

Meetings.

GREAT WESTERN RAILWAY.

Report of the Directors.

The receipts on capital account remained unchanged, the total amount received being £5,260,829, as in last report. The aggregate expenditure to January 31, 1869, amounted to $5,388,103, leaving a balance of £127,274 at the debit of capital account. The outlay on capital account during the half year, after deducting sales of surplus lands, has been £5,509. This expenditure is specified in the engineer's report, and includes the proportion of the cost of forming an embankment behind the abutments of St. George's bridge, near Paris, the cost of building four wooden culverts under the railway embankment near Prairie siding to provide increased waterway; the final proportion of the cost of building in stone the bridge over the Twenty-mile creek at Jordan; of extending sidings at the Suspension Bridge, London, Copetown, and Lynden, and laying down a third rail in sidings at Beamsville, Komoka, and London; the balance of the payment on account of the new freight house at Detroit; and the building of a windmill pump and water tank at Belle River. The receipts and expenditure on revenue account were as follows:

Gross receipts		£423,312
Working expenses, including renewals		209,752
		£213,560
From which there is to be deducted—		
Interest on bonds, loan, &c.	£52,536	
Loss on conversion of American funds	70,362	
Loss on working Erie & Niagara Railway	1,453	
Detroit fire claims	1,158	
Amount set aside for renewal of ferry steamers	3,000	
		£128,509
		£85,051
Add surplus from last half-year		1,129
Proportion of half-year's dividend on Detroit and Milwaukee preference shares		5,311
Profit on working Galt and Guelph Railway		211
Available for dividend		£91,702

From this amount the Directors recommend a dividend at the rate of 5 per cent per annum, payable in London on May 12, free of income-tax, which will absorb £89,124, and leave a surplus of £2,578 to be carried to the credit of the next half-year. The renewal fund for the ferry steamers now amounts, with interest, to £10,303. The amount charged for Detroit fire claims is caused by writing off as a bad debt the entire claims in suit against certain insurance companies, although a portion may hereafter be collected. The loss on conversion of American currency for the half-year amounts to £70,362, as compared with £66,612 for the corresponding half-year in 1868. The average rate of conversions made during the half-year was 138½, the average price of gold for the same period having been 140½. The unconverted American funds in hand and outstanding traffic payable in that currency at January 31, 1869, show a decrease of $18,838.20, compared with the amount at the end of last half-year. The following table exhibits the receipts and expenses for seven corresponding half-years:

RECEIPTS.

Half-year ending	Passengers, mails, and sundries. £	Freight, and live stock. £	Rents. £	Total. £
Jan. 31, 1863	122,627	183,099	579	309,305
" 1864	129,684	171,329	621	301,634
" 1865	154,125	157,854	730	312,730
" 1866	205,131	181,071	837	387,039
" 1867	168,986	161,254	1,273	331,513
" 1868	186,537	213,476	800	400,813
" 1869	183,703	238,764	846	413,312

EXPENSES.

	Including renewals. £	Per cent. of gross receipts.
Jan. 31, 1863	172,568	55.79
" 1864	171,336	56.80
" 1865	168,577	53.91
" 1866	170,003	43.93
" 1887	166,632	50.26
" 1868	193,667	48.31
" 1869	209,752	49.55

The total traffic receipts show an increase of £22,453, as compared with the corresponding half-year. This increase arises as follows:

Increase in local passenger traffic		£6,455
Increase in through freight and live stock		26,659
		£33,114
Decrease in through passenger traffic	£570	
" emigrant	997	
" express freight and sundries	7,722	
" local freight and live stock	1,351	
		10,661
Total increase		£22,453

The low tariff of rates and fares referred to in the last half-yearly report arising from the competition of other lines, has continued; hence the percentage of working expenses is somewhat higher than at the corresponding period of 1868; but, notwithstanding this, the percentage of working expenses compares favorably with the average of the six preceding corresponding half-years, as will be seen by the above table. The cost of ordinary working expenses per train mile in the last and four previous corresponding half-years was—

Jan. 31, 1865	5s. 1½d.	sterling.
" 1866	4s. 6¾d.	"
" 1867	4s. 7¼d.	"
" 1868	4s. 5¾d.	"
" 1869	4s. 3¾d.	"

The usual detailed report of the engineer and mechanical superintendent are appended, and there is also a special certificate from each of these officers, in the form prescribed for English railways. The mechanical superintendent's report mentions that a new passenger engine has been completed during the past half year, and set to work, the cost being defrayed out of revenue. On the 22nd of January last a special meeting of shareholders was held in London, to consider a definite communication from the Government of the Dominion of Canada, for the settlement of the Provincial advance and arrears of interest on the following basis, viz.: that the principal sum of £573,688 should be repaid by four equal annual instalments commencing from 1st January, 1870, and that for the arrears of interest, a sum should be fixed, equivalent to placing the Government, as regards interest, on about an equal footing with the shareholders of the Company, since the Company ceased in 1860 to make the half-yearly interest payments to the Government. The Proprietors concurred with the Directors that such a settlement would be desirable. In consequence

thereof the Honorable William McMaster, Chairman of the Executive Committee, with the officers of the Company in Canada, after several conferences at Ottawa, with the Minister of Finance and the Auditor General, came to a final adjustment of figures, and agreed that the principal sum (representing the Government advance,) with the accrued interest up to the 1st January, 1869, less money due from Government for mail and military transport service, should be commuted for a total sum of £668,815, payable by annual instalments, the liquidated balance, year by year to bear interest at the rate of 4 per cent. per annum, instead of 6 per cent. as at present. The remission of interest which has been already charged against revenue, together with the further advantage resulting from the diminished rate of interest on the unpaid balance; amount in the aggregate to upwards of £180,000. The first stipulation of the Government was the payment in Canada of £100,000 on the 10th February, and this has been complied with. It is expected that the Government will bring the terms of this settlement under the notice of the Legislature, which meets on the 15th April, by message from the Governor-General, on which resolutions of the House of Commons will have to be passed, and a bill introduced to carry them into effect. It is hoped that intelligence of the Parliamentary confirmation of these terms will be received previous to the general meeting, in which event the meeting will be made special, to ratify the same, and to submit a plan for raising the necessary funds. The Proprietors are aware that in 1864, and again in 1868, a deputation from the English board visited Canada, and upon both occasions rendered most essential services to the Company. To the mission in 1868 must be mainly attributed the settlement now happily arrived at with the Canadian Government. The actual expenses incurred on these occasions have been paid by the Company. The board, however, trust that the Proprietors will readily acquiesce with them in thinking that important services of this nature call for some special recognition, and they ask permission to appropriate for this purpose the sum of 1,500 guineas, which will provide an acknowledgment for the two gentlemen who formed the deputation. The Directors are glad to announce that a Canadian Company are about to construct an extension of the Galt and Guelph branch northwards, across the fertile agricultural country beyond Guelph, a district hitherto without railway communication. This line is called the Wellington, Grey and Bruce railway, and it is intended ultimately to be extended to the shores of Lake Huron. The Great Western Company have agreed to supply rolling stock, and work the first section of 16 miles, when completed as far as the town of Fergus, at 70 per cent. of the gross earnings. Further, it is agreed that an account shall be kept of the railway traffic exchanged between the Great Western railway and the new line, and that 20 per cent. of this traffic shall be set aside annually and appropriated to redeem the capital cost of the line, so that in the course of years the branch will gradually become a part of the Great Western system. The Directors have the satisfaction of stating that the net revenue of the Detroit and Milwaukee Company for the half-year ended 31st December, 1868, has, as was anticipated in the last report, permitted of a payment on account of arrears of dividend on the $2,095,000 preference shares of that Company (being the securities representing the loan of £250,000 with accrued interest) at the rate of 7 per cent. per annum, amounting to $73,325, which, after deducting United States internal revenue tax and cost of conversion, has produced in gold £10,622. The Directors, as will be seen by the net revenue account No. 3, have placed one-half of this amount to the credit of revenue, and the remaining portion has been applied in part liquidation of the old Detroit and Milwaukee interest account standing in the balance-sheet, which latter is now reduced to £9,957. The receipts and expenditures of the Detroit and Milwaukee railroad for the year ending 31st Dec, 1868, have been satisfactory, and show the following results:—Gross earnings, £353,033; working expenses, £208,281; net, £144,752. The Detroit and Milwaukee Company is progressing very satisfactorily, and the receipts show an increase over the corresponding period up to March 25th of £8,204, or upwards of 15 per cent.

On behalf of the board of Directors,
THOMAS DAKIN, President.

London, April 14, 1869.

COMMERCIAL BANK OF N. B.—An adjourned meeting of the Stockholders was held early in the present month. The President submitted a statement showing a reduction of the circulation from $261,100, on the 23rd Nov. last, to $30,582, on the 30th April, 1869, and of the discounts from $269,932 to $57,644. The total liabilities were reduced from $630,958 to $293,052, and the assets from $765,671 to $427,765. It was agreed that the President should be paid at the rate of £500 per annum since the Bank closed. A motion to proceed to the election of Directors for the ensuing year, was opposed by Mr. Kerr and others as illegal but was carried. The following gentlemen were elected Directors for the ensuing year:—Hon. A. McL. Seely, Wm. Parks, James Vernon, Robert Reed, J. V. Troop. And at a subsequent meeting of the Directors, the Hon. A. McL. Seely was chosen President.

Financial.

TORONTO STOCK MARKET.

(Reported by Pellatt & Osler, Brokers.)

The stock market is quiet, and little change has taken place in prices during the week.

Bank Stock.—Sales of Montreal were made at 155 to 156½. There are buyers of British at 105, sellers asking 105½. Sales of Ontario were made at 101. Little Toronto offering; small sales were made at 118½. Royal Canadian opened at 75, but closed lower, with sales at 68 to 70. No Commerce offering under 103 to 103½; buyers offer 102½. There are buyers of Gore at 35; sellers asking 36½. Sales of Merchants were made at 107, 107¼ and 107½; buyers now offer 108. No Quebec offering; it would bring 103. Molson's sold at 108 and 108½. Transactions in City occurred at 101½ and 102, closing with sellers at the latter rate. Buyers offer 106 for Nationale; little offering. Sales of Jacques Cartier were made at 109½ and 110, closing with buyers at the latter rate. Mechanics sold at 93. Other banks nominal.

Debentures.—Dominion stock is offered at 108½. There is a large lot of Toronto debentures on market at present, offering to pay about 7 per cent. interest. County are not so much enquired for; buyers hold off.

Sundries.—City Gas is offered at 107½; no buyers. Little Canada Permanent Building Society in market; no sales. A small amount of Western Canada B. S. is offered at 121. The Freehold has declared a 5 per cent. dividend, causing the stock to advance 2 or 3 per cent. Sales of Montreal Telegraph were made at 134½; no sellers now under 135. Sellers ask 79 for Canada Landed Credit; little in market. Several mortgages have been placed, during the week, to pay 8 per cent. Money continues in good demand, and high rates were paid on Commercial paper.

RATE OF INTEREST.

Mr. Rose has laid before the House a series of six short resolutions relating to the rate of interest, which, if passed, will be embodied in a bill to be enacted by Parliament. They provide that six per cent per annum shall continue to be the legal rate of interest in all cases where by the agreement of the parties or by law, interest is payable and no rate has been fixed by the parties in writing by the law; that any rate of interest not exceeding eight per cent per annum may be paid in advance or otherwise, and being paid may be retained or may be stipulated in writing, and may be recovered or being paid may be retained; that if any higher rate than eight per cent. per annum is stipulated, such rate shall be *ipso facto* reduced to 8 per cent. per annum, as a penalty, and that only shall be recoverable, and if any higher rate than eight per cent. per annum be paid, the excess of the rate paid over six per cent. shall be recoverable by the parties paying it, provided the action for recovering it be brought within six months from the payment; that all former laws respecting interest and usury shall be repealed; that the foregoing provisions shall apply to any loan, or contract for the loan or forbearance of money, made after the day of next; that these provisions shall not apply to any person or body corporate which by any existing law or by the terms of any charter or act of incorporation, may lawfully stipulate for and receive a higher rate of interest than eight per cent.

DOMINION ACCOUNTS.—The following is an analysis of the receipts and expenditure of the Dominion during the first year of existence:

The gross receipts of the Dominion on account of the Province of Canada—the several Provinces.	$16,830,0
Less loans	2,994,6
Ordinary Revenue of Dominion...	$13,835,4
Gross Expenditure of the Dominion	$13,704,17
Less Redemption	337,68
Balance	$13,366,4
Whereof, on account of Public Works chargeable to Capital	587,78
Balance	$12,778,7
Subsidies, Ontario and Quebec	$2,156,12
Add one year's interest on Trust Funds	177,16
Total	$2,333,28
Less interest on excess of debt (say $11,000,000)	555,00
Payable annually	$1,783,28
Actually paid	1,588,78
Excess payable beyond actual payments	$194,50
Ordinary expenditure of the Dominion	12,973,21
Surplus	$862,24
Total	$13,834,46

THE BUDGET.

The speech of the Minister of Finance, moving the House into Committee of ways and means, furnishes the following particulars:—

On reference to the estimates laid before the House in March, 1868, the receipts were estimated in round numbers at $14,696,000. This was the gross sum the Dominion was expected to receive. Eliminating from those receipts what was found upon subsequent examination to belong to the Provinces, the receipts on the Dominion account proper was found to be $13,835,000 and a further sum, ascertained to belong to the Provinces of $556,000, making together the total receipts $14,381,000, against an estimated receipt of $14,696,000 showing an over estimate for the year $315,000. That discrepancy would be accounted for by the fact that in April, May and June

ear, the customs fell short $345,000 and miscellaneous $328,000. With reference to the ascertained expenditure for the same year, it would be seen that the estimate submitted to the House, in April last, was $14,321,000, and the ascertained result, as regarded the Dominion proper, was $12,-3,000 ; the expenditure on account of the Provinces, with which they have been charged, was 72,790, making a total of $13,235,790 of expenditure. This fell short of the estimate $775,-0. He desired to place them into possession of the actual result brought down to a Dominion sis, leaving out on both sides the receipts and yments found to belong to the various provinces. Leaving this out of account, he found that last year's revenue of the Dominion proper s $13,835,460 and the expenditure $12,973,211, owing an apparent surplus of $862,259 ; but it s only an apparent surplus, the House must t infer it to be an actual surplus, for during the st year of Confederation those various services ich would in ordinary years have gone to swell figures of 1867-8 were not so chargeable that ur. None of the services of the preceeding year ne into account the first year of our existence, ereas some of the services properly appertain- to that year were postponed until 1868-9. The Auditor estimates that amount at $300,000 ich will leave as the actual surplus for 1867-8, sum of $562,259 ; but he the Financa Minis- was inclined to reduce the amount $500,000 ; ugh every effort has been made to act with ct impartiality, and fairness, yet possibly their nds from Ontario and Quebec might take ex- tion to some of the items. Taking this sum of 0,000 from the $862,259, the apparent surplus, real surplus of the first year of Confederation be reduced to a little over $360,000. He next came to the current year 1868-9, of ch ten months had already elapsed. He de- d to call the attention of the House to the mate made in March, 1868, of the probable ipts and expenditure for the current year. At time there were three great sources of reve- Customs, Excise and Miscellaneous. Only of these sources exist now ; Miscellaneous g reduced to very small dimensions ; from e two therefore, the estimated receipts were lated. Customs was set down at $9,000,000. actual result, judging from the Customs re- ts of the past ten months, will be a deficiency early a million. The Excise was estimated at 14,000, but it would probably not be so much bout $600,000. The Miscellaneous was esti- d at $2,500,000, whereas the yield be $2,716,- showing an exeess of $216,000, The result ese items shew that while the Revenue was ear estimated at $15,114,000, the real revenue lated by the experience of the past ten hs would be about $13,750,009, which will a falling off in receipts of about $1,364,000. would next refer to the operations of the 1868-9. The gross receipts of the year were 69,037 ; deduct from this loans for redemp- of debt $12,124,381, will leave as ordinary ue $13,743,656. The gross expenditure for e same period was $22,409,181 ; from this t redemptions of public debt and investments ayment of arrears, amounting in all to $8,- 56 leaving as ordinary expenditure $12,470,- This leaves a balance in favor of the year's tions of $274,032. (Hear, Hear.) In stating figures he had concealed nothing, there had no postponement of payments. The Government knew that the revenue was off, and that they were asked to submit an te of the probable expenditure for the three months. With eare and accuracy stimated it at $4,733,195. He then reverted actual financial position as affected by the tion of last session. When he addressed ouse last session, there was a considerable g debt, to the Bank of Montreal and the in England ; there was also a million of per eent bouds maturing ; in addition, pay- on account of the Provinces of New Brunswick and Nova Scotia for public works. To meet these payments, and sponge out the National Debt required a very great strain at the outset upon the resources of the Dominion.

The Savings Banks, though, in operation for so short a time, had been evidently productive of great good ; there were 213 banks with 6,079 depositors the majority of whom were minors and married men. The Deposits amounted to $676,-383. The total amount received an account of the Intercolonial loan was $10,283,003 ; of this government invested $270,000 at 6 per cent. in the Sinking Fund, thus reducing our debt by so much. They had paid off the old Imperial loan for building canals, bearing 4 per cent. interest $671,000, they had paid off the loan from Baring's and Glyn's bearing 5 per cent. interest $983,000. Next they paid off the Bank of Montreal $2,500,-000 together with $500,000, due to the Ontario Government, and besides had redeemed the 7 per cent. debentures issued two years ago, to the amount of $873,000. Of the balance of the Intercolonial loan, there was in the Bank of Montreal $1,500,000, and the remainder $2,900,000 was in the Agents hands in London.

For recouping the loan when required, they had $270,000 of Sinking Fund, $2,900,000 in hands of London Agents, $749,000 of India Bonds, $3,254,000 of Great Western Railway debts, receipts from insuranee companies for two years $1,-500,000, deposit in Bank of Montreal at 4 per cent. $1,500,000, the Savings Bank deposits, a credit of £500,000 with the Bank of Montreal and £250,000 with Baring's and Glyn's—total an excess of $974,000 over and above the amount of the Intercolonial loan.

As regards the condition of the country, he considered it good. Whatever of embarrassment existed was owing to over-trading. He took as indications of the soundness of the country the facts that the deposits in the banks had increased from $8,300,000 in 1858 to $26,700,000 in 1868 ; that the deposits in the savings banks in Ontario and Quebec had increased from $2,900,000 in 1866 to $3,234,000 in 1868 ; and the building society deposits from $555,000 to $919,000, besides the deposits in the post office savings banks, amounting to $670,000. The savings bank deposits in New Brunswick and Nova Scotia had also increased, so that during the last three years the total deposits in the banks and savings banks had increased from $32,600,000 to $37,500,000. The railway traffic also showed an increase from $4,620 per mile in 1866 to $4,800 in 1867, and $5,020 per mile in 1868. In 1866 there was an increase of bankers' capital of $1,618,000, in 1867 of $1,799,000, and in 1868 of $2,838,000. He alluded also to the progress made by the principal cities in the Dominion, and said that the municipal returns from twenty counties of Ontario showed for the year 1868, as compared with 1867, an increase in assessed value of real estate of $1,716,000 ; of eattle, $385,00, ; of sheep, $156,-000 ; and of horses, $458,000. In some of these counties there was a decrease under certain heads to the amount of $242,000, but altogether there was an increase in those twenty counties of $2,480,000. If the same increase were preserved for the other eounties there would be an increase in one year in the value of assessed property for the whole of Ontario of $3,588,000. In view of such facts as these he thought he was warranted in asserting that though some interests might be languishing, the country was substantially in a sound condition. He referred also, in this connection, to the great rise in the value of our securities in England, and then adverted to the special circumstances which had produeed the over-importations of some years back, especially to the great demand from the United States to fill the vacuum caused there by the war. From these causes our total imports had risen from $37,800,-000 in 1864-65 to $52,600,000 in 1866-67. The imports of dry goods in the same period increased from $13,500,000 to $21,500,000. In the latter part of 1867-68 the imports began to fall off, principally in cottons, woollens and linens. The decrease in the percentage of duties this year was not less than 25½ per cent. on woollens, 16⅔ on cottons, and 24 per cent. on linens. In millinery there was an increase, however of 12 per cent., and there was an increase in the article of liquors in much the same proportion. On the first nine months of the fiscal year, 1868-69, as compared with the correspouding period of 1867-68, there was a decrease in customs duties of $450,000 or 9 per cent in the old Province of Ontario ; of $101,000 or 15 per cent. in New Brunswick ; and of $321,000 or 37 per cent. in Nova Scotia. The total falling off in the Dominion was $870,000 or 13 per cent. He proceeded to show on what grounds he had based his estimates for the coming year, 1869-70. In the first place he had ascertained the amount of goods in bond, which was $3,100,000, in April, 1869, against $2,906,000 in April, 1868. The duty on the goods now in bond would be $1,021,000. The next inquiry was as to the amount of goods in the hands of merchants. Seven returns said the stocks were about the same this year as last; six said the stocks were larger ; ten, and these from the more important points, said the stocks were considerably smaller. The next inquiry was as to the prospects of importation. Returns from eleven localities said the importation of the coming year would probably be in excess of those of the past year ; seven said they would be certainly equal ; six said they would be about equal ; and five said they would be less. He thought that already there were symptoms, that trade was reviving. He did not expect the same excess of importation as had characterized some previous years, but already there were signs of a revival. The customs dutics of the first four months of this year showed an increase of 2½ per eent. over the corresponding months of last year. The month of April showed an increase of nearly 9 per cent. over 1868. From these facts he drew the inference that the recent falling off in imports was not due to any inherent, deep-rooted, deep-seated distress in the country, but was merely owing to an over importation of certain articles. He did not attach so much importance as some did to the Reciprocity Treaty. During the last year of its existence the export to the United States was $21,-340,000, and in 1868 $20,061,000, or a little over five per eent. In lumber there was an increase of 44 per cent. ; in animals a decrease of 46 per cent; in grain and flour there had been a falling off, and in other articles a decrease of $300,000. In 1866-7 there was sent from Canada to Nova Scotia and New Brunswick 408,000 barrels of flour. In 1868 there was an aggregate of 443,000 or an excess of 33 per cent. The increase in coal sent up was 17 per cent.

The gross estimate for the coming year was $17,659,000; from customs $8,600,000; excise $3,300,000. In 1868 he might mention the consumption was 3,836,009; then as regards malt the estimated consumption last year was 27,000,000 lbs. Next year he estimated that the consumption will be 28,000,000 lbs. The tobacco estimate taking into account the large stocks on hand in the Maratime Provinces and the imperfect machinery yet in existenee for the collecting of the duty, amounted to $515,000. This he had no doubt would be very sensibly and largely increased. From petroleum last year, the receipts were $99,000, and this year they were estimated at $120,000. These three items constituted the $3,300,000. The third item of revenue which includes the revenue from Public Works, Post Office, Stamps, &c., he estimated at $2,665,000. The revenue, therefore, at a moderate estimate would be $14,565,000 against an expenditure of $14,319,000, leaving a very small but he believed a very certain balance on the right side of the account of $246,132. In regard to the item in the estimates of $336,000 for the Sinking Fund, he mentioned that he charged that item against the income for the year, because we had really and honestly to provide for it; that Sinking Fund as provided for was in hand, we have brought

it in advance, and having more money in hand than we know what to do with, he thought it would not be amiss to anticipate the Sinking Fund knowing that next year we would have to provide for it, but he thought it but right this sum should be put in as an estimate for the year. Yet being on hand of course it augmented our cash balance at the close of the year.

THURSDAY, MAY 20, 1869.

USURY.*

The time was when to receive interest upon money, no matter at how trifling a rate, was held to be an offence against the law of nature and the law of God. For upwards of 1500 years this was the universally accredited doctrine throughout Europe. It was a sin to borrow money at interest; it was far greater to lend it. The fathers of the Church, its Popes and Councils, its theologians, and its law, as embodied in the Canon, were unanimous in denouncing this thing as a species of robbery, as a crime which like murder, &c. was palpably contrary to the law of nature. It was condemned by 17 Popes, and 28 Councils of the Church. Money-lenders were subject to legal penalties, were put to the torture and were held up to public odium as infamous persons. In the year 1179, the third Lateran Council, convened by Pope Alexander III., decreed that money-lenders, unless they repented of their crime, should not be admitted to the altar, nor be absolved at the hour of death, nor receive Christian burial. Any one who denied that the receiving of interest on money was a sin was denounced as a vile heretic, the proper expiation of whose offence was to be burnt alive, a sentence which was executed upon more than one poor wretch, who was afflicted in this way by the malady of thought. In some countries the property of money-lenders was subject, after their death, to confiscation by the crown. This arrangement was eminently satisfactory, for, as an acute writer remarks, it enabled the government to obtain a loan from a money-lender, while he was living, and to rob his children when he was dead. The Act of 3 Henry VII. c. 6 (1486) provided that "all brokers of such bargains shall be set on the pillory, put to open shame, be half a-year imprisoned and pay £20." Traces of the same feeling are to be found in comparatively recent times. Thus, in the preamble to the Act of 5 & 6 Edward VI. c. 20, (1552) it is recited that the charging of interest is a vice most odious and detestable, and contrary to the word of God. Again in sec. 5 of 13 Eliz. c. 8 (1570) we find these words, "And forasmuch as all usury, being forbidden by the law of God, is sin and detestable." The Act of 21 James I. c. 17, (1623) while allowing as a commercial necessity the taking of interest at the rate fixed by it, was careful to add as a proviso (sec. 6) "That no words in this law contained shall be construed or expounded to allow the practice of usury in point of religion and conscience." Even so late as 1745 Pope Benedict XIV. (in many respects a great and enlightened man) issued an encyclical letter, in which the doctrine of the Church was authoritatively laid down, that the taking of interest on money is always a sin, and that its amount being small, or exacted from rich men only, or to further commercial undertakings, does not alter its character in the least. The superstition which we have above sketched has now happily almost disappeared, being found to any great extent only in Russia, where, according to Storch, a well known political economist of that country, some sects of dissenters from the national Church, still hold that it is sinful to lend money at interest. This happy change is due to the influence partly of the reformation, and partly of the works of speculative writers on the subject, principally political economists. But though the original feeling thus almost extinct, there is ample eviden that some relics of it still linger in our mid We need go no further than our legislati halls to find it. In late years, however, has taken a new form, which objects, not the receiving of any interest, but to the r ceiving of what is considered too much.

Since the almost total abolition in Cana of the usury laws, about ten years ago, o Parliament, annually, has had inflicted up it, bills to re-enact such a law with more less stringency. This session the flood con stronger than ever. Not less than thr members have introduced such bills. O proposes to limit the rate of interest to eig per cent., the penalty for infringement to the forfeiture of all interest if sued for with one year. Another proposes to limit t rate to seven per cent. If more is receive the contract to be void; all interest and o half the principal to be recoverable on s by any one; one half the amount recover to go to the informer, the other half to lo schools. The third bill makes the limit ei per cent., the penalty being forfeiture treble the value of the subject of the c tract; one-half to go to any one who w sue as informer, the other half to the I ceiver General. This last is substantia the same as the old Act of 51 Geo. III., c. which was abolished in 1859, except that that act the limit was six per cent. If th had been a prospect that these bills, like th in former years, would be consigned merited oblivion, we should not have thou it worth while to notice the subject. H ever, as there is an evident determination the part of a considerable section of the C mons to force through the House a bill some kind on the subject, and as the pr sure has become so strong as to induce Government to give way, and itself to int duce a bill, we deem it our duty to prot in the strongest manner, against the me tated wrong. When the greater part of world is steadily advancing towards perf freedom in all matters of trade and co merce between both men and nations; wh even countries so backward on these subje as Austria and Spain are joining in the ge ral movement; it would be no other th great misfortune that Canada, which has often set an enlightened example to otl nations, should now betake herself to t crab-like motion of going backwards. do not wish to question the motives of th who introduce such measures; doubtl they mean well. Their mistake is th through want of sufficient knowledge of t operation of such laws, they do not kn that it is impossible to put a stop, by le penalties, to things of the kind; that,

* This word is used throughout the article as meaning the receiving of any interest whatever.

atter how strongly such enactments may e hedged about with precautions, they are ways systematically evaded, and that their fect, in practice, has been found to be alays to make the evil worse, by raising, instead of lowering the rate of interest. It s been truly said that well-intentioned igrance has inflicted more evil on the world an any other thing whatever.

The particular mischiefs which usury laws casion has been pointed out and discussed numerous writers during the last 300 years. ne of the first by whom it was partially recogzed was the great Reformer Calvin. He it s who first pointed out the absurdity of istotle's dictum that "all money is sterile nature," and consistently he maintained e lawfulness of taking interest. He s followed by Salmasius (the celebrated ponent of Milton), who, about the year 40, wrote some works attacking the old trine. Then came Locke, who, in 1691, his "Considerations on the lowering of erest," showed that interest depends on pply and demand, and that all attempts to rict it would be pernicious and abortive. e next important work on the subject was t of the great French economist, Turgot, n Usury," published in 1769—just one ndred years ago. In it the modern doctre is laid down so fully and clearly as to e left little to be added since. Hume Adam Smith (1776), though somewhat cted with the old errors, were, on the le, strongly inclined to the modern and liberal view. The *coup de grâce* was reed, however, for Bentham, whose mas"Letters on the Usury Laws," pubed in 1787, gave the death-blow to the ideas, and added the finishing touch to correct theory. Since then the policy of raining by law the rate of interest has r received the support of a single writer ny note, while all the great writers, such ay, Mill, Buckle, McCulloch and Lecky, t one with Bentham and his predeceson the same side. It usually takes at a hundred years for new truths, after have been thoroughly understood and ted by the speculative thinker, to pere down to the level of ordinary politi. As, therefore, nearly that time has ed since Bentham gave the finishing to the theory of the subject, we may aps indulge the hope that the present pt is nearly the last which will be made is country; that it is no more than tful flash of the candle expiring in its t. With a view of hastening its total guishment, we give a few of the results may be gathered from the works of the rs named. We begin by pointing out ature of interest. It is compossed of elements:

1. The price paid for the use of the money. This depends upon the laws of supply and demand, as affected by the profit on production. In countries where the natural productive power is small, interest will be lower (other things being equal) than in those where the productive power is great.

2. The interest (or price) of insurance. This is to insure the lender against the risk which he runs of losing the whole or a part of his principal. As in other species of insurance the greater the risk, the greater will be the premium required to meet it. A money-lender, of course, charges more where the debt is not well secured. The better the security the lower will be the rate.

3. The business of money-lending is, even now, though far less intensely than formerly, the subject of some popular odium. To repay a person adopting the business for this disagreeable adjunct to it, a rate of profit (or interest) is charged higher than could be obtained by investing money in ways not subject to a similar social stigma. Men cannot be expected to undergo humiliation of this kind for nothing. Formerly, when the feeling referred to was so strong that hardly any but Jews could be induced to become "money-lending dogs," as the common phrase went, it had an immense effect in raising the rate of interest. Now, when the feeling is comparatively very feeble, it operates very slightly. So long, however, as any stigma exists, so long will an extra rate be charged as compensation. So much, then, as to the nature of interest. The foregoing analysis will be sufficient of itself to indicate to many the impolicy of tying down to a fixed limit a thing affected by such varying circumstances.

THE GOVERNMENT BANKING SCHEME.

The Government scheme which it is proposed to substitute for our present system of banking is now before the country. It is substantially the National Bank system of the United States on a *quasi* specie basis. The difficulty is to discover why a change of system is necessary. The Finance Minister asserts that the Government are not in pressing want of money, and he admits that conservative and cautious management has on the whole distinguished the operations of the Banks. It is not denied that the present system has proved itself well adapted to the circumstances of the country, and that there have been fewer losses to the holders of bank notes in Canada than in any other country which possesses a similar bank-note circulation, or even one based on Government securities, while it is contended by those most familiar with the working of the system that the new scheme will, if adopted, affect disastrously the interests of the country, and, in all probability lead to an irredeemable currency. So that, at the outset, it is a fit subject of inquiry why it is deemed advisable to jeopardize immediate and continuous convertibility for the certainty of ultimate redemption; to substitute a non-elastic currency for one which has proved itself so well suited to the wants of trade; to attach a Dead-Weight to all our banking institutions and lessen by so much their available resources. The *onus probandi* is clearly on those who would effect a change which almost all our bankers condemnas fraught with injurious consequences, and our merchants protest against as uncalled for, and nicely calculated to tell on their interests not only now when their circumstances are embarrassed, but in the future as well.

The Government scheme has some good features. No one has asserted that our present system could not be improved. These good features to which we refer might be easily grafted on that system, and there would be no dissentient voice. All our bankers are willing to see proper provision made for the security of note-holders, and, have, themselves, suggested most of the restrictions which the Finance Minister has so dexterously twined around his scheme to secure a forced loan.

The great objection to a currency system nailed to government securities is its want of elasticity. In every country the amount of currency fluctuates at different periods to accommodate itself to the volume of transactions to which its instrumentality is requisite. In England it was stated that these fluctuations are in the proportion of three to one. In other words, it requires a currency of seven millions to maintain a circulation which, for the whole year, averages only three millions. In Canada, circulation attains the highest point in the month of October. In the Province of Ontario an elastic currency is an absolute necessity, and any system not characterized by that great element is likely to prove ruinous. It would be a mistake to suppose that twelve millions of bank notes would imply an uniform circulation of that amount. At no time could the banks get on without a reserve of greater or less amount of notes in their vaults, so that to issue a given amount of notes would not ensure a circulation of that amount. The amount of securities deposited would then, with those the banks already possess, be the measure of the future circulation. Herein lies the great fault of the Finance Minister's scheme. By way of glossing it over he says it would pay the banks to keep an extra six or seven millions and the twenty per cent. gold reserve lying in their vaults until required in the autumn! Ontario,

as the chief producing province of the Dominion, will be the real sufferer.

It has already been shown in these columns that, if securities have to be purchased by the banks, an unnatural contraction of the currency will take place. If five millions be taken as the circulation of the Ontario banks, and the government securities they now hold be subtracted, they would have to advance to the government, for the privilege of maintaining a circulation equal to that which they now enjoy, a little less than four millions and a half. The contraction thus induced would, by an inevitable law, cause a fall in prices. Every producer would get less for the results of his labor, and while getting less for our produce, we should have to buy imported articles at a dearer rate. The country would thus lose at both ends.

The present system can be easily amended so as to give the note holder security which is nearly perfect. Take the case of one bank, say, for example, the Bank of Commerce. According to the returns for March, that bank held coin, etc., $1,059,336, and government securities, $104,385, while its circulation was $1,149,844. Under the new scheme it might reduce its gold to $229,968, and would increase its government securities to $1,149,844. Or take all the banks. They held $9,924,769 coin, etc., and $3,118,206 government securities, against $9,905,410 of circulation. Under the new scheme they could reduce their gold to $1,981,082, while they would increase their government securities to $9,905,410. This is a singular feature; it lessens the amount of gold necessary to be held, and increases the amount of government securities. Before Sir Robert Peel's act was passed, it was found that a necessity existed to curtail by law the amount of government securities which the Bank of England may hold. In September, 1839, the bullion in its vaults was below £3,000,000, while it held securities to the amount of nearly £26,000,000. Sir Robert Peel's act provided that notes should not be issued against securities to a greater amount than £14,000,000. Our Finance Minister wishes to reverse this process.

It cannot be said that this substitution of Government promises to pay for gold is an additional safeguard to the currency. The substitution of Government indebtedness for the capital of a bank is an inevitable cause of discredit. The loans forced under the guise of protecting note holders are perpetual. When the banks fail they are not forthcoming. The securities must be thrown on the market and sold for what they will bring. Their market value will depend entirely upon the state of the Government credit at the moment, and in the case of this country it might easily happen that they would not be saleable at all. A foreign war, with England one of the combatants, or a Fenian raid, would give a shock to Canadian credit that Government securities would scarcely be saleable.

But the proposed scheme will not necessarily save the *bonâ fide* note-holders from loss. When a bank suspends, its legal tenders cease to be such. If it is necessary to realize the securities, what becomes of the note holders in the meantime? Would they, as a body, await the process of winding up? The great bulk of circulation is to be found in the hands of laborers, mechanics, and others of the poorer classes of the community. Their circumstances would compel them to sell at the moment of the greatest depression, and they would have to submit to whatever shave a moment of panic might enable speculative purchasers to extort. So that even the certainty of ultimate redemption will not prevent loss to individuals. On this Mr. McCulloch says, "The taking of security for notes is not of itself capable of placing the currency on a proper footing. It would not prevent the stoppage of banks and the serious loss that might result to the holders of notes from their not being negotiable except at a discount, during the period required to realize the securities on which they have been issued."

The conjunction of Government credit and bank credit and the withdrawal of so much gold, may lead as it has often hitherto done in other countries to a suspension of specie payments. In the last century the Bank of England made such large advances to Government, that a suspension of specie payments had to be resorted to. The Bank of France did the same with a like result. The Banks of the United States did so virtually, but the result was anticipated by making the currency irredeemable. The descent to inconvertibility is easy. We have already learned the first lesson. Our Provincial notes were made a legal tender and forced on the banks to be held in lieu of specie. Difficulties were thrown in the way of their redemption by issuing in Toronto notes payable at Montreal and *vice versâ*. It costs a fourth of one per cent to transport notes from one city to another. Such a contrivance shows how irresistible the inclination is to exempt these notes from all demands of convertibility when occasion arises. The same plan is offered as a bait to to the banks. Under the new scheme they would be at liberty to issue in Halifax or Fort Garry legal tenders redeemable in gold only at their head office, wherever it might be.

A specie reserve of twenty per cent. is seemingly relied upon as the great preservative of convertibility. There have be periods when the Bank of England and t Bank of France required for the maintenar of convertibility about half as much gold they had issued notes. The banks of N York were at one time obliged to suspe specie payment with a reserve of bullion their vaults equal to half their note circu tion. At present, as we have shown, banks hold nearly one hundred per cent. their circulation in gold and legal tend and we may rest assured that they do hold it unnecessarily.

The Finance Minister takes it for gran that the increase of deposits will go on a rapid rate. It must be remembered, h ever, that the new scheme lessens somew the security of the depositor by making circulation a first mortgage. Why th should be a distinction between the dep on call and the deposit bearing interest, the matter of specie reserve, we fail to s A specie reserve of one-seventh is to be h against deposits at call, while the other posits are left to take care of themselves. has never before been pretended that it any part of the duty of Government to quire into the security given by the borrow to the lenders of money any more than ir the security given by the borrowers to t lenders of anything else. This is a m matter as to which individuals are fully co petent to judge for themselves, and there not nor can be any reason why a lender depositor of gold, silver or notes should protected more than a lender or depositor wood or coal. If A trusts a sum of mon in the hands of B, it is the affair of the p ties, and of none else. The fact it is t deposit at interest, which should be protect if any protection be given for the deposit call is generally the consideration, eitl direct or indirect, for a line of discoun and may be withdrawn at once in time danger, while the deposit at interest draw more nominal rate of interest, and must bi its time before it can be withdrawn.

Why is the proportion one-seventh fix the reserve against deposits at call? It w considered sufficient to keep one-fifth spe against the Provincial note circulation.

The new scheme, therefore, does not f nish that absolute security which is claim for it: it is unsuited to the circumstances this country by reason of the absence of t element of elasticity; it is calculated to inju the country, by curtailing discounts, by n rowing the resources of the banks, in rend ing bank stocks a less desirable investme than at present, and in reducing the depo at interest, by transferring from the banks the government a large amount of mon which will, in all likelihood, be dissipated endangering the convertibility of the ba note, and by paving the way for that cu to any community, an irredeemable pap currency.

PERJURY IN INSURANCE CASES.

Last week we published an extract from the port of the New York Board of Fire Underwriters, which furnished some statistics of startling character. Thirty-two per cent. losses are the result of design on the part the insured or the direct act of the incendiary! Seven millions nine hundred and ne thousand dollars were paid for losses used in the city of New York during the st 13½ years, by the incendiary! The returns om the Insurance Companies lately laid be- re the Dominion Parliament indicate losses 53 1-5th per cent. of the premiums. How uch of the losses were the result of design are unable to say, but it may be assumed at the per centage in Canada fully equals at of New York; in fact some place it much gher. However that may be, there is not e slightest doubt that our Insurance Comnies suffer greatly from the crime of inndiarism. We have noticed by the law ports that some of our judges lean strongly ainst Insurance Companies in the allowance several pleas, by way of defence, to actions policies. Of course some Companies may use their privileges, and bring discredit on eir fellows, but there is no reason why all ould suffer for the misconduct of one, or t a criminal should gain advantage by ng aided in his attempt to secure the ce of his crime. If arson and incendiarn are to be put down, the only way of doing is by an union between the honest portion the community and the Insurance Comnies. Juries must be taught to feel that judice against Companies in favor of imants is the shield in only too many cases the criminal. Insurance Companies must embine to track out the incendiary, and by nt action secure his conviction. The law st be so amended as to narrow the circle hin which the criminal can move with unity.

A move is being made in the direction last icated, and it is likely we shall have a vision in our criminal law which will ble a company to prosecute for perjury ere a proper case can be made out.

Case after case has come up in which there no doubt that premises have been fired intionally, but evidence sufficient to convict not be brought forward; whereas facts y be shown sufficient to sustain an indictnt for perjury in respect of the declarations oss. The Act now before the Senate resecting offences has been amended in Comtee so as to embrace the following excelle provision:—

ny affirmation, affidavit, or declaration uired by any Fire, Life, or Marine Insurce Company, authorised by law to do busiss in Canada, in regard to any loss of property or life insured or assured therein, may be taken before any Commissioner authorised by any of her Majesty's Superior Courts to take affidavits, any Justice of the Peace, or before any Notary Public, for any Province in the Dominion, and any such officer as is hereby required to take such affirmation, affidavit or declaration. Any person knowingly, wilfully and corruptly making any affirmation, affidavit or declaration required by any Fire, Life, or Marine Insurance Company authorised by law to do business in Canada, claiming to be entitled to any Insurance money in respect of any loss of property or life insured or assured therein, or on behalf of any person making such claim containing any false statement of fact, matter, or thing, in regard to such loss of property, or life, shall be guilty of wilful and corrupt perjury, and shall be liable to be imprisoned in the Penitentiary for any term not exceeding fourteen years, and not less than two years, or to be imprisoned in any other gaol or place of confinement for any term less than two years, and to pay such fine as the Court may award.

Insurance Companies will see the propriety of framing the conditions on their policies so as to utilize this enactment.

IMITATING THE CURRENCY.

An objectionable practice obtains to some extent among patent medicine dealers and others, of getting up an imitation of a bank bill, and circulating it as an advertising dodge. We are not aware of any cases of swindling in this connection here; but in the American cities, there are numerous instances in which the ignorant and unwary have been entrapped into taking these imitations for money. For instance, a party of soldiers purchased fifty dollars worth of wine with a "Mustang Liniment" note; a New Mexican sold a horse for forty dollars, receiving the "greenback" of a commercial house in payment, and did not discover his error till too late.

We contend that this is not a legitimate way of advertising, and ought to be discouraged.

Galway Mining Company.—We understand that this company is pushing on vigourously with three relays of men at work night and day. A specimen of galena, of great purity, has been sent to the office of this journal for exhibition, and we shall have great pleasure in submitting it to the inspection of those interested. Plans of new buildings, smelting works, &c., are being prepared as the great success thus far achieved has given heart to the enterprise. A quantity of ore was sold to American buyers at the mouth of the shaft, at satisfactory prices; besides that a ready market can be had at Montreal for all the ore that can be raised. We hope to be able to send one of our correspondents to the scene of operations ere long, as the development of that mining region is a matter of importance to the country at large.

Ontario Peat Company.—Some changes have been made in the arrangements of this Company, and we are assured that the undertaking will be prosecuted vigorously. Nearly $20,000 of the stock has been subscribed, $14,000 has been taken in part payment of the land, and $36,000 will now be placed on the market, and a canvass for subscriptions made. It is intended to commence operations very soon; we shall watch the progress of the enterprise with much interest.

Insurance Agents in the cities, towns and villages, of the Dominion, would oblige us by furnishing, at our expense, the particulars of fires, in their respective localities, either by mail or telegraph. It is difficult to get strictly reliable information of this kind, so that agents and adjusters would confer upon us a favor—which we would be happy to recognize in a substantial way—and also do their own and other companies an important service, by complying with this request.

—The steamer *Grecian* struck on Split Rock, in the Cedar Rapids, St. Lawrence River, on Tuesday; it is feared she will prove a total loss. A telegram says "her bottom is out." Valued at $50,000, insured for $40,000, in the British America for $5,000, also in the Home, the Ætna of Hartford, and Security for amounts which we have not ascertained.

The Insurance Companies' Returns have been laid before Parliament; the totals are as follows:—

	Premiums.	Losses.
Fire	2,000,000	1,065,000
Life	1,000,000	258,000
Marine	200,000	82,000

LIFE INSURANCE.

Editor of the Canadian Monetary Times.

Life insurance, as one of the easiest and most legitimate modes of providing for a family or old age, is now happily receiving the attention of the thoughtful and prudent. To meet this demand, offices are every day springing into existence: many holding out inducements which the most moderate study of the subject must convince any one who reflects upon it, that they cannot carry out. Unfortunately, the great majority of insurers take it for granted that all companies are equally good, relying upon the agents' statements. Now, entering into such a compact, which, in the great majority of instances, continues through life, is as important a step as entering into business; and any one, in this case, would require carefully to consider the advantages or disadvantages of it before committing himself to such an undertaking. I shall therefore, with your permission, briefly call the attention of your readers to the principles which I think should govern the choice of a company. One of the most important is the conditions contained in the policy as to its restrictions and privileges. Most of the English companies doing business in Canada are based upon the same conditions, the difference being that, in one or two, claims are paid in one month after death, instead of three, and that all policyholders derive equal advantages from the time of entrance, instead of the older policy-holders taking the larger share of the bonuses. The American companies' policies, as a rule, contain conditions which place the insured entirely at the mercy of the company, besides this most important consideration, that in case of trouble between England and the United States, their policies would be valueless, as it is not to be supposed

that any company would allow the insured to take up arms against his country, and which he could not do without their permission, as the clause in the policy expressly provides that they cannot do so. I think that, in order to avoid any difficulty in the future, all intending insurers should insist upon seeing a copy of a policy before signing an application. Another important difference is, that the deposits made by the American companies are applicable to the whole of the policy-holders, both in America and Canada, and not, as in the case of the English companies, for Canadian policy-holders only. The next consideration is the balance sheet, shewing the expenses, mode of investment, &c. The rule which, in my opinion, ought to govern a company, is to impose no restrictions but what are essential, and to carry out their contract with the utmost liberality, bearing in mind that it is with those for whose benefit the insurance was taken out that they will have to arrange. Let a person reflect what a comfort it will be to him to feel that those he is bound by every tie to protect, and prevent their being left to the cold charity of the world, are provided for, and the small pecuniary sacrifice it has cost him to do so, and he will never regret having undertaken such a charge. But in order that he may have such a feeling, he must have the utmost confidence in the company he selects.

Yours, &c.,

INSURANCE.

Toronto, May 8, 1869.

Insurance.

FIRE RECORD.—Dundas, May 12.—John Leslie's brick store, occupied by A. D. Calder, druggist, was consumed, with most of the contents; also some adjoining property. A local paper says: Mr. Lesslie estimates his loss on buildings, furniture, &c., at nearly $8,000, on which he has an insurance of $4,000—$2,000 in the Victoria Mutual, of Hamilton, and $2,000 in the Home District Mutual. Mr. Calder estimates his stock to have been between $4,000 and $5,000, on which he has an insurance of $3,000—$1,700 in the Western, of Canada, and $1,300 in the Commercial Union. The Engine House, which was the property of the town was worth, probably $300; no insurance.

Essa Township, Ont., May.—Outbuildings of Robert Latimer, with contents, were destroyed; loss estimated at $1,500; no insurance; cause—a coal from Latimer's pipe.

Brooklin, May 11.—Daniel Halliday's barn, stables and sheds, were consumed, with contents. The fire originated from a burning chimney at the house. Loss about $1,500; partly covered by insurance.

Bridgewater, Ont., May 11.—Five buildings were consumed; said to be without insurance.

Carleton, N. B., May.—House of T. Witchenhahl; insured for $1,200.

Breslau, Ont., May 9.—Barn of Jacob Clemens, with contents; loss estimated at $1,200; the fire originated from a heap of rubbish which a hired man had, contrary to orders, lighted.

Quebec, May.—House of Smith, butcher, was entirely destroyed.

Port Perry, May.—J. B. Lazier's drying kiln, with contents; loss estimated at $1,000.

Trafalgar Township, Ont., May 8.—Barn and outbuildings of A. Mitchell; caused by a heap of rubbish in the yard taking fire in some way.

Esquesing Township, Ont., May 11.—Saw-mill and shingle factory of James Morrison; loss stated at $1,600; without insurance.

Flamboro Township, Ont., May 11.—William Mordens's frame building, near Flamboro Village, took fire from sparks from the chimney, and with adjoining house of A. Raymond, was consumed; contents mostly saved; loss stated at $1,000.

Waterdown, Ont., May 11.—House and barn of Richard Attridge, and barn of William Attridge, in East Flamboro; and 500 cords wood were consumed. A local paper states the insurance on R. Attridge's barn at $800.

Paisley, Ont., May 11. Store of W. C. Bruce, and hotel of Robert Mitchell. The last named insured in the Toronto Mutual for $800 on buildings; most of the furniture saved; barn said to be insured for $1,000 on building, and $2,000 on stock.

Sarnia, May 11.—Dr. Shoebotham's stable and barn. Loss stated at $1,000.

Canifton, Ont., May 11. Fairman's hotel, and a number of houses and barns; Fairman's loss is stated at $3,000, and the total loss at $7 000 part of which is said to be covered by insurance.

We regret to learn from the Ottawa papers of the death of Mr. Donough O'Brien, for some years assistant secretary of the Provincial Insurance Company, a position he filled most creditably until he was compelled to resign on account of failing health.

Railway News.

GREAT WESTERN RAILWAY.—Traffic for week ending April 23, 1869.

Passengers	$27,964 60
Freight	55,973 30
Mails and Sundries	2,060 56
Total Receipts for week	$85,938 46
Coresponding week, 1868	80,756 53
Increase	$5,181 93

NORTHERN RAILWAY. Traffic receipts for week ending May 8, 1869:

Passengers	$2,572 17
Freight	11,360 61
Mails and sundries	204 36
Total receipts for week	$14,137 14
Corresponding week 1868	13,243 82
Increase	$893 32

THE GOVERNMENT BANKING SYSTEM.

Hon. Mr. Rose, in bringing forward his resolutions, said that three systems were now in force in the Provinces. In Nova Scotia the bank charters provide that the banks' liabilities shall not exceed three times the amount of their capital, and there is no special restriction with reference to circulation, nor provision for keeping specie on hand. In New Brunswick there is a provision that the total liabilities of the bank shall not exceed twice the amount of their capital. In Ontario and Quebec the general provision exists that circulation shall not exceed the amount of capital stock plus the specie kept in vault and the government securities held. Many of the banks are now asking the renewal of their charters, and the enlargement of their operations, consequent on Confederation, calls for great consideration. He would admit that most prudent, conservative, and cautious management had, on the whole, distinguished the operations of the various Provinces. But without further restrictions than exist in the present charters, it was possible for a bank to begin its operations, lend money to the public, and make the public its first creditor, without having any capital actually paid in. Such a thing as this was quite possible under the present provisions governing bank charters; for if a certain number of persons subscribed the amount of stock required to start a bank, such an institution could commence operations and issue its notes; those notes would be discounted, and its circulation would be placed in the hands of the public, although the bank had no real capital except the notes of the individuals starting it. It was possible so to insure the power given under the present banking charters as to produce the result. It was possible to start such a bank and to circulate its notes, though it need have no specie behind its circulation to protect the public. I had to ask the calm and deliberate attention the House to those weak points of the existi system, and to the question whether they were be perpetuated in the future or not. And th was another difficulty. Not only might there a circulation out without any capital actually hind it, but even after the capital had been paid in, there might be a circulation kept up the amount permitted by the charter, after t whole capital had been entirely annihilated, a the public had nothing whatever to look to; there was no provision requiring an amount specie to be kept in the vaults in order to rep sent the circulation.

After referring to the various bank failures, continued: There were at this moment in t Dominion about forty chartered banks, with ca tals varying from $60,000 up to $6,000,000. O bank had a capital of $129,000, with an avera circulation of $154,000, and specie to the amou of only $11,000. Another, with a capital $200,000, had a circulation of $205,000, and $29,000 in specie to meet the circulation. third, with a capital of $72,000, had a circulati of $154,000, and only $32,000 of specie. No although the past management of our ban might have been conducted without resulting any general or overwhelming calamity to t country, circumstances were very different n from what they had been when the business of t various banks was restricted by the isolated co dition of the Provinces in which they were sit ated. Now the means of communication betwe all parts of the Dominion were becoming rapid improved, and the notes of any of our ban might circulate from British Columbia on t one side to Halifax on the other. This consider tion, that the operation of the various ban would now extend to the whole of British Nor America, made it all the more incumbent on P liament to consider whether the system on whi they had hitherto been conducted was a safe o to be continued under these altered circumstance We are about engaging, very shortly, in large a extensive public works. The temptation to ov circulate would soon be very great, and it wa therefore, of essential importance that the cir lating medium should be placed on a sound basi The Government had no special object of its ow to obtain in this matter. They were not urged b any pressing wants, but they were actuated sole by a single-minded desire to place the banki institutions of the country on the soundest a most wholesome basis that could be reached. I admitted that they could not deal with existi interests or existing institutions rashly or inco siderately. The average circulation of the ban of Ontario and Quebec was about $12,000,00 The highest circulation ever reached was in Oct ber, 1868—$15,120,000. The capital of these bank at this time was $30,000,000, and they had d posits to the amount of $11,000,000, so that th had, above the highest point of circulation th had ever reached, $45,000,000 of available cas for the general purpose of trade. The averag circulation represented only one-fifth of the cap tal which the banks had at their disposal. Th Government proposed to allow the banks to co tinue as they were without any change whatev in their condition, or any further restriction upo their operations until July, 1871, that being th time when their charters expire. The limitatio as to time in their charters was, that they shoul continue till 1st July, 1870, and thence to th end of the next session of Parliament. They therefore, proposed that until the 1st July, 187 banks should be left in possession of their existin charters, but that after that time they shoul gradually reduce their circulation by 20 per cen a year, until the circulation should be ultimatel entirely based on government securities. Thu for the year ending July, 1872, the banks shoul be allowed to circulate 80 per cent. of the highes

circulation, that, namely, of October, 1868 ; that during next year they should replace 20 per cent. more of their circulation by Government securities, until in July, 1876, the whole circulation would be based on government securities. The change, in consequence of the gradual and almost imperceptible contraction of the circulation, would not be felt as injurious to the banks, and would not deprive them in any sensible degree of the facilities heretofore enjoyed for carrying on the commercial operations of the country. It was objected that this measure would needlessly curtail the facilities which the banks now possess for carrying on the business of the country. Well, suppose that in seven years from now the whole circulation of the country was based upon government securities. The average circulation, he had stated, was $12,000,000 ; the average amount of specie they held last year was $8,900,000 ; they also held $3,000,000 of government securities, the two together being about $12,000,000. It was proposed that in return for government securities the Government would return to the banks circulating notes on much the same principle as the national bank currency of the United States. The notes would be of uniform appearance, bearing on their face that they were secured by deposits of Dominion securities only. They would purport to be issued by the particular bank to which they were delivered, and would be signed by an officer of the bank.

Mr. Gibbs asked whether, as the Bank circulation was displaced, it would be compulsory on the banks to replace it at once in Government circulation.

Hon. Mr. Rose—Certainly not. If any Banks chose to confine themselves to carrying on the ordinary business of banking, they might do so. It was proposed that the Banks should keep a specie reserve of 20 per cent. of their circulation, and also a specie reserve equal to one-seventh of the amount of deposits at call not bearing interest. The deposits on call represented the commercial balances from day to day, and the Government had thought it necessary to make a difference in this respect between these and the deposits bearing interest, which must be regarded simply as investments as to which the depositor must assume himself the same risk as he had with reference to any other investment. The amount of specie and government securities which would ultimately be required as the reserve for Government notes, and one-seventh of the deposits on call, would, on the present basis of circulation and deposits, be $6,900,000. Against this, as he had said, the banks had specie and Government securities, in '68, to the amount of about $12,000,000,—leaving to be made up in cash, during the next seven years, $4,900,000. This was but a little over 5½ per cent. per annum spread over seven years on the average circulation, and rather less than one and a half per cent. per annum on the average discounts; and would any one tell him that this gradual and almost imperceptible contraction was going seriously to cramp the operations of the banks.

Hon. Mr. Holton enquired whether the banks would be at liberty to purchase these securities in the open market, or whether there would be prescribed a certain class of securities to be furnished by the Government.

Hon. Mr. Rose said they might purchase the securities in the open market. He proceeded to show how the calculation would stand. Instead of average circulation, the highest circulation, $15,000,000 was taken, bringing out the result that the difference to be made by the banks in 7 years would be $8,320,000, or 7 9-10 per cent per annum for the next seven years on the highest circulation, and 2½ per cent per annum for the same time on the highest discounts. In these calculations he had included the circulation of Dominion notes, but it was proposed that these should be gradually withdrawn and the present Government issue should be withdrawn. If the specie held in reserve for these Dominion notes, $925,000 was deducted, the amount to be made up would be reduced to $7,400,000, which was a small fraction of over 7 per cent per annum on the highest circulation, and a small fraction over 2 per cent per annum on the highest discounts. Mr. Rose proceeded to apply the same mode of calculation to the case of five Ontario banks,—the Bank of Toronto, Merchants' Bank, Ontario Bank, Royal Canadian Bank and the Bank of Commerce, bringing out the result that the difference to be made up by these banks would be $3,717,000, being seven and seven-tenths per cent. per annum for seven years, on their highest circulation, $8,883,000, and not quite 3 per cent. per annum for the same time on their highest discounts, $17,771,000. These figures, he contended, proved that this scheme, by its gradual operation, would not cramp the facilities which the banks had to give to their customers and the public. Moreover, he had in these calculations put the matter on most unfavorable footing, by assuming that there would be no increase of banking capital and of deposits. But that was not a result to be anticipated. There were at present before the House a number of applications for new Banking Incorporations and for an increase of capital to existing institutions. He might mention, also, that from March, 1862, to March, 1869, while the aggregate circulation of banks had only increased six per cent, their capital had increased 9 per cent and their deposits 90 per cent. It was reasonable to suppose, with the prospects before us, that the increase of capital deposits would go on at a rapid ratio. He then answered the objection that the banks would not be able to afford the additional facilities required during the three months of the year for moving the crops. He said this would require about $6,000,000 which bore a comparatively small proportion to $30,000,000 of deposits and $15,000,000 of capital, and contended that it would pay the banks to keep that amount on hand for autumn use, as they would be getting the interest for it.

In answer to Mr. Lawson,

Hon. Mr. Rose said that the Dominion notes would be redeemed by each bank issuing them at its head office.

In reply to Mr. Young,

Hon. Mr. Rose said that each bank must redeem its notes at the capital city of the Province where the headquarters of the bank were, the redemption being in fact exactly the same as at present.

Mr. Gibbs asked if bills payable in Halifax were held by a party in Toronto, who wanted to get gold for them, would not the holder either have to pay the rate of exchange or express them there?

Hon. Mr. Rose—The notes held were legal tenders anywhere in the Dominion. Of course, if a merchant, having in his possession that which was as good as gold, chose to send to Halifax for the specie, he must incur the expense of sending it there, but there was no motive in his doing so.

Hon. Mr. Dorion asked whether it was the intention of the Government to prevent any of the bank charters from being prolonged.

Hon. Mr. Rose said that all applications for prolongations of charters would go to the Committee on Banking and Commerce, and remain there until the sense of the House was taken with reference to the measure.

Hon. Mr. Wood asked what was to be done in the case of the Bank of British North America, the charter of which was placed on a different footing from that of other banks.

Hon. Mr. Rose was under the impression that all the charters expired at the same time, June 1870.

Mr. Lawson said this was not the case. Part of their circulation was under the Free Banking Act.

Hon. Mr. Holton—In the case of this bank, too, the double liability is not in their charter; it would be well if the Finance Minister would explain whether the Government meant the double liability to continue in any case.

Hon. Mr. Rose—The Government proposal is to continue the charters as they are for a period of ten years—the organization not being touched in any instance.

Sir John A. Macdonald explained that it was the desire of the Government to get an expression of opinion from Parliament this session on the resolutions.

Hon. J. H. Cameron objected to the measure being presented this session. A little, but only a little, of its details had leaked out and become known in the country; and, in his opinion, a more extended time than that day week was required for the discussion of these resolutions in the country. The Government proposition was one which it was said placed a great deal more power, and a great deal more money, in the hands of the Government than was desirable. Besides the Government scheme assumed that the banking system of the country was so entirely defective as not to be relied on—an assumption which would be repudiated by many commercial men. In coming down with a measure of such great importance, the Government ought to have given stronger reasons for the proposed change than they had done. It was so important a measure, dealing with the whole banking capital of the country, that hon. gentlemen had a right to claim that full opportunity should be given the public at large for expressing an opinion on it. One thing was clear, even at this stage, that, so far from asking for such a measure, petitions from all parts of the country had poured in against it.

Commercial.

Toronto Market.

There was no improvement in the general trade of the city during the week, and there is still a good deal of depression, and great caution is exercised in every department. This could not be otherwise under present circumstances. A certain result of the pending change in the banking system of the country will be that of curtailing discounts and advances for a short time at least. This will bear with unusual severity on very many wholesale men at the present time, owing to the difficulty of getting in their debts from the country. Apprehension of this acts as a powerful check upon business.

Produce.—Large stocks of breadstuffs in all the principal markets, and most favorable reports of the growing crops from every quarter, has caused a further fall in prices, amounting to 10 or 15 cents per barrel on Flour. The near approach of the warm season tends somewhat in the same direction, though our flour being generally very sound is not exposed to much damage from that cause. *Wheat.*—Receipts, 26,467 bushels and 29,000 bush. for the corresponding week last year. Stock in store on the 15th 106,750 bush.; sales of spring at 96c., closing at 94c. ; fall sold at 98c. but closed lower. *Barley.*—No receipts, stock in store on the 15th, 4,500 bush.; market lower; 2,100 bush. sold at 80c. *Oats.*—Receipts 4,200 bush. and 2,400 bush. for the corresponding week of last year; stock in store on the 15th, 9,600 bush.; demand active and sales at 55 to 56c. for carloads. *Peas.*—No receipts; stock on the 15th, 23,000 bush. ; carlots nominal at 70 to 72c. *Corn.*—Sales of cars were made at 60c. *Seeds.*—Timothy dearer and higher, $3 to $3.25.

Flour—Receipts, 1,750 brls, and 1,800 brls for the corresponding week of last year ; stock in store on the 15th, 18,631 brls ; market dull and lower ; 1,000 brls No. 1 sold at $4.05, but the market closed with sellers at $4. *Spring Wheat*—Extra sold at $4.15 ; fancy sold at $4.25 ; these occurred early in the week, since when the market has been nominal, with a downward tendency. *Oatmeal*—Small lots af choice $5.75 to $6. *Cornmeal*—Selling, in small lots, at $3.75 to $4.

Provisions—New crop butter is beginning to arrive, but the market for all grades is dull at quotations. Eggs have met with a good demand

at 14c. Cutmeats—Nothing doing in a wholesale way.

GROCERIES—Raw sugars are easier. Teas unchanged.

HIDES—Dull and lower as quoted.

LEATHER—All curried stock is rather easier; sole keeps firm.

HARDWARE—The enquiry for haying and harvest tools has commenced, which gives a little more activity.

FREIGHTS—Rates of Vessels—3c to Oswego, U. S. C'y, and 2c gold to Kingston; grain to Montreal, by steamer, 6½c to 7c; flour, 20c to 25c; lumber to Oswego, $1.50, greenbacks, per M feet.

The following are the Grand Trunk Railway Company's summer rates from Toronto to the undermentioned stations, which came into force on the 19th ult.:—Flour to all Stations from Belleville to Lynn, inclusive, 25c; grain, per 100 lbs, 13c; flour to Prescott, 30c; grain, 15c; flour to all stations between Island Pond and Portland, inclusive, 75c; grain, 38c; flour to Boston, 80c, gold; grain, 40c; flour to Halifax, 90c; flour to St. John, 85c.

Halifax Market.

BREADSTUFFS—May 11—We quote no change in flours during the past week. Supers continue in active request, at quotations with reduced stocks. Extras dull and nominal, stocks large. Fancy in moderate request at quotations. No. 2 has met with some demand for better description only. Oatmeal offers freely, with only a small local demand.

WHITE WHEAT EXTRA (FALL)—$6.00 to $6.25; Fancy $5.60 to $5.70; Bakers' Strong $5.50 to $5.60; Superfine $5.40; No. 2, $4.75 to $5.00. Cornmeal (K.D.) $3.80, F. G. $3.60 to $3.70. Oatmeal $6.50 to $6.75. Rye Flour, $5.85. White Beans $2.50 to $3.00. Round Peas $4.50; Split $6.00 to $7.00 per bbl.

WEST INDIA PRODUCE.—Molasses and Sugars dull, with only a limited demand. Holders evince considerable anxiety to effect sales, and quotations may be considered nominal. Rum inactive at quotations. Coffee more active; rates improved.

We quote Sugar (V. P.) 10 to 11c.; Porto Rico, 10½c.; Cuba ——; Barbadoes, 9¾ to 9¾. Molasses, Cienfuegos, 41; Demerara, 38 to 40c. Rum 58 to 60c. (in bond). Coffee (Jamacia), 15 to 16c. nominal; St. Domingo, 12 to 13c.

Exports of Petroleum from the United States, from January 1 to May 11.

AMOUNT OF ACCUMULATED AND INVESTED FUNDS—OVER ONE MILLION STERLING.

HEAD OFFICE—EDINBURGH.

PRESIDENT—The Rt. Hon. the Earl of Haddington. MANAGER—D. Maclagan, Esq. SECRETARY—Alex. H. Whytt, Esq.

CANADIAN OFFICE ESTABLISHED 1857. WELLINGTON STREET, TORONTO.

CANADIAN BOARD—Hon. John Hillyard Cameron, M.P., Chairman. J. W. Gamble, Esq., L. Moffatt, Esq., Hon J. B. Robinson, C. J. Campbell, Esq. David Higgins, Secretary.

THE Edinburgh Life Assurance Company offer to the public the advantages of a Canadian as well as a British Company. They have invested a large amount of money on securities in this country, and the Toronto Local Board have full power, by an Imperial Statute, to take risks, make investments, and settle claims in Canada, without reference to the Head Office, Edinburgh. Some of the old Policies in the Company, which became claims during the past year, were settled by payment of amounts double of those originally insured, in consequence of the large bonuses that accrued on the Policies.

Every information that intending assurers may require can be obtained at the Company's Office in Toronto, or at any of the Agencies which have been established in the principal towns in Canada.

J. HILLYARD CAMERON, CHAIRMAN. (35-1y) DAVID HIGGINS, SECRETARY.

THE ONTARIO PEAT COMPANY.

CAPITAL, ... $120,000.

THIS COMPANY is PROVISIONALLY organized as follows :—

DIRECTORS :

HENRY S. HOWLAND, Esq., ... Toronto. | LARRATT W. SMITH, Esq,..... Toronto.
JOHN FISKEN, Esq., ... Toronto. | ALFRED TODD, Esq., ...Ottawa.
EDWARD A. C. PEW, Esq.,... ....Welland.

TRUSTEES OF THE LANDS :

PELEG HOWLAND, Esq..... Toronto. | CHARLES J. CAMPBELL, Esq..... Toronto.

TREASURERS :

CHARLES J. CAMPBELL, Esq., ... Toronto. | WALTER G. CASSELS, Esq..... Toronto.

BROKERS :

MESSRS. CAMPBELL AND CASSELLS,.....92 King Street Toronto.

SOLICITORS :

MESSRS. SMITH AND WOOD, ... Wellington Street, Toronto.

SECRETARY :

JOHN WEBSTER HANCOCK, Esq., ...22 Toronto Street, Toronto.

The lands of the Company are 1,375 acres, in the County of Welland, of the purchase value of $55,000.

The owners of the land have taken stock to the amount of.....	$44,000
It is proposed to reserve for future contingencies.....	20,000
And to put upon the market the balance of.....	56,000
	$120,000

Nearly 20,000 of the said balance is already subscribed, and the rest is in the hands of the Brokers of the Company.

A Charter of Incorporation is being applied for, and the operations of the Company will commence very soon.

Subscription Books for the Stock not yet taken up lie at the office of Messrs. Campbell and Cassels, 92 King St., Toronto.

May 19, 1869.

President—WM. EDGAR, Esq., Hamilton. Vice-President—ROBERT REFORD, Esq. (Messrs. Reford & Dillon), Montreal.

Secretary-Treasurer—A. McK. COCHRANE, 388 St. Paul Street, Montreal.

THIS COMPANY, with machinery now in working order and in course of construction, will be able to manufacture this year FROM TEN TO TWELVE THOUSAND TONS OF GOOD FUEL. Actual working shows—

I. That the fuel can be produced for $1.45 a ton, and with the improved machinery, at a much less cost.
II. That, for steam purposes, one ton of it is superior to one cord of wood, in the proportion of 31 to 27.
III. That, for domestic purposes, it is equal to wood or coal, and leaves very little ashes—about five per cent.

At the annual meeting of the Company in Montreal, it was decided to offer one thousand shares of Stock in Toronto. Mr. Isaac C. Gilmor has been appointed agent of the Company in Toronto, and is authorized to receive subscriptions for the Stock.

Prospectus, Map of the Property, and further information may be obtained by addressing

ISAAC C. GILMOR, 58 Colborne Street, Toronto.

WOODBRIDGE S. OLMSTEAD, SECRETARY,
EDWIN W. BRYANT, ACTUARY,
JAMES GOODWIN, PRESIDENT,
ZEPHANIAH PRESTON, VICE PRESIDENT.
LUCIAN S. WILCOX, MEDICAL EXAMINER.

Organized in 1846. Charter Perpetual.

The Largest Mutual Life Insurance Company. Numbering Over 75,000 Members.

BEING A PURELY MUTUAL COMPANY ITS ASSETS BELONG EXCLUSIVELY TO ITS MEMBERS,

ASSETS, $21,000,000.—Acquired by prudent and economical management of twenty-two years, without the aid of a single dollar of original capital.

SURPLUS ASSETS, $6,361,967—All profits divided among the members. Each policy holder is a member. There are no stockholders.

ITS DIVIDENDS—Have averaged over 50 per cent. annually. Total amount of dividends paid the members since its organization, $4,397,142.

ITS SUCCESS UNPARALLELED—It has arrived at the extraordinary condition where the income from annual interest alone is more than sufficient to pay all the losses. Total amount of losses paid by the Company, $6,868,528.

ITS RESPONSIBILITY—For every $100 of liabilities it has $154 of assets.

LAST YEAR'S PROSPEROUS BUSINESS.

Amount insured fiscal year, 1867 .....$45,647,191 00 | Income received fiscal year, 1867.....$7,530,886 19

During its last fiscal year this Company paid to its living members, and to the families of deceased members, nearly $2,000,000, and at the same time added more than four millions to its accumulated capital.

The whole record of this Company has been one of prudent management and prosperous advancement. Among the older and leading Life Insurance Companies its average ratio of expenses to income has, through its entire history, been the lowest of any.

ITS LIBERALITY—It accommodates the insured by giving credit for part premium, and grants insurance to meet all the contingencies and wants to which Life Insurance is applicable.

It issues policies on a single life from $100 to $25,000.

MEDICAL REFEREES—J. WIDMER ROLPH, M.D.; H. H. WRIGHT, M.D.

LIFE ASSOCIATION OF SCOTLAND.

Invested Funds Upwards of £1,000,000 Sterling.

THIS Institution differs from other Life Offices, in that the BONUSES FROM PROFITS are applied on a special system for the Policy-holder's personal benefit and enjoyment during his own lifetime, with the option of large bonus additions to the sum assured. The Policy-holder thus obtains a large reduction of present outlay, or a provision for old age of a most important amount in one cash payment, or a life annuity, without any expense or outlay whatever beyond the ordinary Assurance Premium for the Sum Assured, which remains intact for Policy-holders' heirs, or other purposes.

Insurance.

Briton Medical and General Life Association,

with which is united the

BRITANNIA LIFE ASSURANCE COMPANY.

Capital and Invested Funds.....£750,000 *Sterling.*

ANNUAL INCOME, £220,000 STG. :

Yearly increasing at the rate of £25,000 Sterling.

THE important and peculiar feature originally introduced by this Company, in applying the periodical Bonuses, so as to make Policies payable during life, without any higher rate of premiums being charged, has caused the success of the BRITON MEDICAL AND GENERAL to be almost unparalleled in the history of Life Assurance. *Life Policies on the Profit Scale become payable during the lifetime of the Assured, thus rendering a Policy of Assurance a means of subsistence in old age, as well as a protection for a family,* and a more valuable security to creditors in the event of early death; and effectually meeting the often urged objection, that persons do not themselves reap the benefit of their own prudence and forethought.

No extra charge made to members of Volunteer Corps for services within the British Provinces.

Meetings.

COMMERCIAL UNION ASSURANCE CO.

The annual general meeting of the company was held on Tuesday, the 9th March, 1869. The report and accounts for the year were submitted :—

The Directors of the Commercial Union Assurance Company have the satisfaction to report to their shareholders that the improvement exhibited in 1867 has been maintained during the past year.

The revision of the risks in the Fire branch alluded to in the last report has been continued, and it is satisfactory to the Directors that the reduction of premium income thereby entailed has been compensated by new premiums on risks of a better character. The balance in hand is in excess of that carried down last year, while the losses outstanding amount to £8,000 as against £11.000 on 31st December, 1867.

With respect to the Life branch the Directors have to state that since their last report the Actuary's valuation has been completed, and that in accordance therewith the sum of £41,000 has been distributed out of profits for the period ending 31st December, 1867. One-fifth of this amount, or £8,200. belonged to shareholders, and was transferred to their account ; the balance £32,800 belonged to the policy holders and was equivalent on an average to a reversionary addition of over £2 2s per cent. per annum on the sums assured.

The business for the year 1868 was as follows:—508 policies were effected, assuring £306,670, and yielding £10,186 in new premiums. The claims were 14, amounting to £16,532, of which £5,080 was re-assured. Of the net claims £5,100 had accrued in 1867, as stated in the last report, whereas only 6 for £2,150 were outstanding on the 31st December last. The Directors have to notice the maturing of endowment assurance policies for £30,000, which closes some large and profitable transactions. The charges connected with the valuation and distribution of the bonus are included in the expenses of management.

The business of the Marine branch continues steadily to progress. Notwithstanding the general depression in trade, the premium income has been maintained. The outstanding liabilities on 31st December, 1868, were considerably less than at the end of 1867, while the balance had increased by upwards of £80,000.

The Directors recommend the distribution of a dividend at the rate of 5 per cent. and a bonus of 2s 6d per share, free of income tax, being 7½ per cent. on the paid up capital of the company.

The Directors have to record, with deep regret, the loss of three of their esteemed colleagues, Mr. D. Hart, and Mr. J. Humphery, by death, and of Mr. J. K. Welch by retirement.

The Directors have elected to seats at the Board Mr. Alfred Giles and Mr. Alexander Robertson, whose influence will, they believe, largely promote the interests of the company. Resolutions confirmatory of their election, will be submitted to the general meeting.

In accordance with the provisions of the deed of settlement, the following Directors retire by rotation, viz., Messrs. Coleman, Griffiths, Hanson, Harris and Leaf, who offer themselves for re-election.

The Auditors, Messrs. Milnes, Tate and Porter offer themselves for re-election.

By order of the Board.

ALEX. SUTHERLAND, *Secretary.*

The Chairman John Boustead, Esq., then made the following statement in moving the adoption of the Report :—

On the occasion of our last meeting, we had reason to congratulate ourselves upon the improved prospects of the company. I think it is again a matter of congratulation that a like measure of prosperity has characterized our transactions in the past year. Our increased premiums indicate that our place in the confidence of the public has been maintained, and our increased balances show that the business we have secured has been of a remunerative character. The accounts of our several departments are in the usual form, and call for little remark. In the Fire Account the premiums of 1868 show an increase of about £3,000 over those of 1867. The average percentage of loss is rather higher, but still below the estimated average. Some sections of the business have resulted most favorably ; others, though in no case entailing a loss, have not yielded an equal profit. As in the first, we think we recognize the consequence of that careful elimination of hazardous risks referred to in the report, so we believe that the application of the same principles to other sections of business will tend to establish more uniform results in all, and a lower percentage of loss than has yet been attained in the transactions of the Fire branch. [Hear, hear.] It will be satisfactory to you to know that the premiums received since the 1st January, have sufficed to meet the claims of £8,000 outstanding at that date, and all losses that have occurred since. In the Life Department our report refers to two subjects of the greatest interest in connection with that branch, viz., the appropriation of the first bonus declared, and the progress of the business during 1868. The allocation of the bonus, and the various methods of distribution were so fully explained last year that it only remains for me to state that the satisfaction which it was expected the policy holders would feel at the addition made to their policies has been fully realized. If our shareholders and our policy holders will bear in mind that the Life Reserve of the office is proportionately larger than that of most other Assurance Companies, and its bonus amongst the largest ever declared, and will do their best to impress this point upon their connections, their is no doubt that a large increase of business would result to us during the present year (Hear, hear.) On reference to the business of 1868, it will be seen that the policies affected were 508 in number, as compared with 439 of the previous year, and the total sum assured was £290,760 in 1867. The new premiums are slightly less owing to the average of the lives assured being less, but the amount of business is actually greater. The claims which have arisen in the year have again been very small, for out of the £16,000 paid, re-assurances gave us £5,000, and a further sum of £8,000 which accrued during 1867, was deducted from the assets before the bonus was declared, so that the claims accrued and paid during 1868 amounted to only £6,000. To this should be added £2,000 outstanding on 31st December last, making a total for the year of £8,000. The importance and value of this circumstance will be best appreciated when I state that the claims expected and provided for (mind, I say provided for,) at the valuation were £20,000 ; in other words, we made a provision of £12,000 in excess of the amount that we have been called upon to pay. (Hear, hear.) There has been an additional source of profit in the falling in of the largest annuity granted by the office. The annuity was for £490, and the sum of £3,284 was reserved in respect to it at the valuation in the beginning of the year. The charges of management show an increase over preceding years ; but, as mentioned in the report, the increase is owing chiefly to the expenses in connection with the valuation and bonus. There is one other feature deserving notice, and that is, the direct business effected at the Head Office, where the character of the company is best known, and where the advantages it offers can be best tested, is greater than the total amount received from all the branches and all the agencies. To those but little acquainted with the company, this circumstance should give the assurance that if they strive to know us better, they will not know us worse. (Cheers.) The events of the past year, otherwise so favorable, have been clouded by the deaths of our esteemed colleagues Mr. David Hart and Mr. Humphery. Their long connection with the company, and their watchful care of its interests, render the circumstances of their removal from amongst us peculiarly sad to the directors, who have been associated with them from the first promotion of the company. (Hear, hear.) The directors have elected Mr. Giles, who will be recognised among us at our annual general meetings as one of our largest shareholders, and who has at all times shown himself to be well versed in our accounts, and to possess a thorough knowledge of our proceedings. In Mr. Alexander Robertson we have a Director of the National Provincial Bank of England, whose experience in that capacity, and whose great influence must contribute to the interests of our company. (Cheers.) The only other subject to which I need advert, is in connection with the dividend and bonus, which we ask you to confirm at the rate together of 7½ per cent. Our recommendation of the dividend is based upon the fact that after providing the £18,750, that it will absorb, and making ample provision for our liabilities on the Fire and Marine accounts, (I purposely except the Life account, as all the liabilities in connection therewith are provided for by special funds in the names of separate trustees), I say that after making ample provision for Fire and Marine liabilities, there will still remain a very large reserve. The circumstance that the balance is much in excess of our liabilities, may possibly have originated a whisper that has reached us that some of our shareholders looked for a higher dividend than the 7½ per cent. we propose to recommend for your confirmation. There are one or two reasons, however, that should induce us to a certain self restraint in this matter. We do not feel justified in appropriating towards dividend or bonus any portion of the sums that have come into our hands in respect to liabilities we have undertaken, so long as those liabilities are undischarged. When these liabilities have run off, then, and not till then, will a certain proportion of the sums which remain in our hands become properly available for distribution. Again we must remember that credit abroad is the very breath of existence to an Assurance company, and that upon the maintenance of this credit must depend the extension of our business, and the opportunity of increasing our dividends in future. No directorate, however influential, proprietary, however wealthy, can ever influ the insuring world in a degree equal to the that a company possesses large and adeq reserves. (Cheers.) Names and reputation nothing compared with balances in h (Cheers.)

The comments of the shareholders upon report and accounts were chiefly of a congratula character, and it is not necessary therefor record them.

In the evening, says an exchange, Directors—not the Company—gave a dinner which several bankers and men of high comme standing were invited, and among the guests Sir G. E. Cartier, Bart., and the Hon. Wm. Dougall, C. B., who sat on the right and lef the Chairman. Among the toasts, that of "p perity to the Colonies" was proposed by Mr. L worthy, one of the Directors, who remarked most men of property in England had a direc terest in the colonies, and he might venture to that every other gentleman in the room der from them a large portion of his income. Adv ing especially in Canada, he considered that ny the model dependency of England, whe viewed as to its population, system of educat loyalty to the mother country, or lightne taxation.

Sir George E. Cartier responded to the t and observed that the prosperity of the mo country was implied in that of the colonies. ever important Canada was to England at the sent time, it was destined to become of much importance in the future, as Canadians had d mined to extend their territory from the Atla to the Pacific, and to assume in America the p tion, without the despotism, of Russia in Eur He insisted upon the loyalty of Canada, and st that should a disagreement arise between Eng and the United States, the Canadians were prepared to fight the battles of England Canadian territory. He concluded with the that the success which the *'Commercial Union'* achieved in England might be equalled by success in Canada.

The Hon Wm. MacDougall proposed "P perity to the Commercial Union Assurance C pany," and said that, having the pleasure to k the Company's representatives in Canada, he beli the Branch there could not help progressing w it continued so ably directed. Alluding to distress which the scheme of Assurance tende mitigate, he spoke at length upon the subje emigration as a powerful means of lessening pov and misery, and directed attention to the fru territory of Hudson's Bay, which, if it were pos ed by Canada, only awaited labourers to bec one of the most fertile regions in the world.

MONTREAL AND CHAMPLAIN RAILW

The following is the report of the directors the year ended 31st Dec., 1868 :—

The accounts for the year 1868, which are pended to this report, show that the propor of net revenue due to this company, under agreement with the Grand Trunk Company, amounted to the sum of $90,663.56. The amo accruing under the lease, for the year 1866, $72,613.09, showing an improvement during year 1868 of $18,050.47. The amount earne 1868, is very nearly sufficient to meet the inte on bonds, and pay the dividend on ten per c preferred stock. The large extent of renew rendered necessary upon the amalgamated li has rendered the amount of net profit below w would otherwise have been the case. The accou have been examined by the joint committee provided for by the agreement—and they re that they are satisfied that justice has been d both to the line and rolling stock during the twelve months, within the meaning of the te of an amalgamation of the two companies. I

road and rolling stock are now in excellent dition, a very large amount having been ex- ded during the last two years upon the bridge Lacadie, the abutments of which were falling vn. The amount at the credit of the Sinking nd is now $28,541.87.

e ballot was taken for the election of Direc- or the current year, and the following gentle- were found to have been elected: Hon. James r, C. J. Brydges, W. E. Phillips, Hugh Al- William Molson, E. H. King, Johnston Thom- Edward M. Hopkins, Gilbert Scott. The g auditors (Messrs. Thomas Morland and m Sache) were unanimously re-elected. At equent meeting of the newly appointed Di- s, the Hon. James Ferrier was elected Presi- William Molson, Esq., Vice-President, and n Hickson, Esq., Secretary of the Company e current year.

BEC AND GOSFORD RAILWAY.—The first g of the newly elected Board took place bee, when H. G. Joly, Esq., was elected ent, and Henry Fry, Esq., Vice-President.

Insurance.

FIRE RECORD.—Mitchell, Ont., May 19.—A fire broke out in the large flour mill owned by Francis Holland, totally destroying the building and contents. Loss $9,000; insured for $3,850 in the Liverpool and London and Globe, and $5,000 in the Ætna of Hartford. The Western had $1,000 on the contents. Cause unknown.

Whitby, May 19. —The driving house and barn owned by Wm. Blair, was burnt to the ground. It contained two horses. Insured in the Beaver Mutual Co.

Meaford, May 16.—Foundry of D. Sinclair; he estimates his loss at $5,000; insured in the Gore District and Provincial.

Peterborough, May 17.—House of A. W. Kempt destroyed by fire; covered by insurance.

Wawanosh, Co. Huron, March 12.—The barn of James Deacon, 10th con., caught fire from some stumps, and was totally consumed; lost a very valuable span of horses, a fanning mill, part of a threshing machine, and some hay. No insurance.

Euphrasia Township, Co. Grey, May 14.—The house of William Wilson, 10th con., was destroyed. No insurance.

Sarawak Township, Ont., May 12.—Barn and stable, with contents, of Wm. Garvie; loss $800; insured for $220.

St. Catharines, May 20.—A building connected Mr. Oille's machine shop; loss stated at $1,000; without insurance.

Bothwell, May 24 —A telegram says:—Another very destructive fire took place here to-day, levelling with the ground the American House, Lebu's Livery Stable, Mr. Brady's dwelling-house, the New England Dining-room, the Pepper Well Office, the Great Western Buildings, comprising Station House, Freight House, Baggage Room, Tank House, and Western Wood Shed. In the latter were two engines which were also destroyed. The cause of the fire is as yet unknown; but supposed to be the work of an incendiary, from the fact of its having originated in the roof of the American House, which was unoccupied at the time. Great credit is due to those present, for the manner in which they exerted themselves. The loss is estimated at between $15,000 and $20,000. Few Insurances.

Toronto, May.—House of Unwin & Kirkpatrick, Seaton street; loss about $3,000 on building and contents; insured in Toronto Mutual for $1,000.

Whitby, May.—Barn of Daniel Holliday, reported last week, was insured in the Beaver Mutual for $400.

In response to our invitation to insurance agents to send information, we have the following batch of fires from an obliging agent:—

Thomas Campbell, lot 11, 7th con. Hope; barn burned; loss $300; insurance had expired in the Agricultural Mutual. Campbell thought insurance a humbug; supposed to be set on fire by parties stealing grain.

Richard Morton, lot 15, 5th con. Hope; barn and stable burned. Insured in Agricultural Mutual for $230. Cause either smoking or children playing with matches; (total) $500, or about.

Mrs. Rowland, lot 25, 1st con. Manvers; barn burned. Insured in either Beaver Mutual, or Canada Farmers, for $150; cause unknown.

Francis Early, of Orono (Clarke township), had barn in Manvers burned. I hear it was insured.

INSURANCE IN PRINCE EDWARD ISLAND.—In the Annual Report of the Charlottetown Mutual Fire Insurance Company it is stated that all foreign insurance offices have withdrawn except one, and it seemed doubtful if that office would remain after some pending claims have been settled. The Directors state that the Company has been in operation twenty years. After the great fire which occurred in July, 1866, burning down nearly one-fourth of the business part of Charlottetown, this company has only been obliged to levy one per cent. and had the company not have returned a bonus of one half year's premium to policy holders a short time previous, it would not have been obliged to levy even the one per cent. and it must be borne in mind that many of the old policy holders are insured at half per cent.

—One Walsh recently sued the Waterloo Mutual Insurance Co. on a policy covering a barn on his premises. The company resisted payment. The case came on at the Woodstock assizes some time since, and a verdict was rendered for the defendants. Walsh's criminality in connection with the burning was proved beyond a doubt. So strong was the evidence, that the Judge ordered the arrest of Walsh when the trial was over. The company deserves credit for having, at the risk of becoming unpopular, defeated the swindle attempted by this knave.

LIVE STOCK INSURANCE COMPANIES.

The last of these companies has disappeared from its field of operations, and as its light went out an impression went abroad that there exists no sound basis on which to establish such a class of risks. But the disasters of these companies were chiefly attributable to their own incaution, by which the worthless cattle of a band of knaves were admitted to protection, and the ample funds provided for better purposes were squandered in remunerating unscrupulous policy holders for the loss of animals, more than half of which had been assisted in their passage to the grave.

The pioneer company, the Hartford Live Stock Insurance Company—was chartered by the Legislature of Connecticut, in May, 1866, with a capital of five hundred thousand dollars, of which one hundred thousand dollars were deposited with the State Treasurer. At the start premiums flowed in plentifully, and the stockholders were highly delighted at the apparent success in this hitherto unexplored field of commerce. In the following January the assets of the company were reported to be $178,929, out of which ten per cent. dividend was paid to the stockholders.

The success of this company gave birth to a rival, and in May, 1867, the Ætna Live Stock Insurance Company appeared upon the field with a paid up capital of one hundred and fifty thousand dollars, and both companies seemed in a flourishing condition, the stock of the older company being quoted at fifty and of the younger at ten dollars premium.

In the spring of 1868 a new board of officers took charge of the Hartford Company, when a very bad state of affairs was disclosed, the directors having neglected to report nearly eighty thousand dollars sustained in losses, while the books were encumbered with a large volume of bad risks.

The new direction attempted to secure the company from its impending ruin; but the agents were hopelessly demoralized and the losses too frequent, so that in July, 1868, about three months after the retirement of the old directors, the company succumbed to its fate, the losses exceeded the paid up capital by forty thousand dollars.

Admonished by the collapse of its rival, the Ætna advanced its rates thirty-three and a third per cent., and as it had a surplus of sixty thousand dollars as the result of a years business, and had been managed with more caution and ability it was hoped that it might weather the storm. But confidence had been shaken. Those policyholders who had met with no losses objected to the increased rates, and business declined, so that in January in 1869 the directors decided that the losses on the policies already issued made the future too doubtful to warrant a continuance of the experiment, and the agents were directed to issue no more policies nor write more renewals.

The Hartford was in existence a year and ten months and lost four hundred and ten thousand dollars. The Ætna closed its business after sixteen months practice and lost one hundred and twenty thousand dollars.

The original tariff of rates of the two companies

were about the same. On farming and private horses from four to twelve years old, five per cent.; from twelve to sixteen, six per cent;. ; on store and express horses, five and a half per cent.; from twelve to sixteen, six and a half per cent.; truck and dray horses in cities, seven per cent.; car horses, eight per cent. ; colts, stalions, and brood mares, six per cent. ; trotting horses, six to ten per cent. ; oxen and cows, live per cent. Agents were directed to insure but two-thirds of the real value, and to refer all risks for over eight hundred dollars on any one animal to the home office. The insurance risk was against death only, but a theft risk would be granted for an addition of two and one quarter and two and three quarters per cent. Inland transportation risks were taken at one half to three per cent.

Risks on canal horses, street car horses, sheep and menagerie stock were soon rejected. Upon the failure of the Hartford the Ætna advanced its rates to six or seven per cent. on private horses, eight or nine per cent. on horses used for business purposes, and six or seven per cent. on horned cattle.

The Ætna made a manful struggle to sustain its life ; but it fell a prey to its agents, some of whom were but sorry judges of a horse, and accepted the opinion of others on its value, and thus often insured a decaying animal for treble its worth ; whilst those officers who knew something more of there living risks than their confreres, were deficient in integrity, which was no less calamitous to the company. Thus experience teaches us that unless these great defects can be surmounted, it is impossible for a company taking a wide range of country as its area of business to conduct a live stock company to a profitable purpose.

It is to be regretted that the protective principle of insurance can not be made to extend to live stock because of the want of co-operation on the part of the agents ; but the severe lesson experienced by two companies of this character, one of which at least seems to have been well managed, is not likely to go forgotten amongst those anxious for such protection. In England several have succeeded, one particularly, which confines its operations to the live stock of the county of Norfolk, stood through the calamitous period of the rinderpest without being reduced to either bankruptcy or dissolution, and perhaps in this country if the risks were confined to a small district and full inquiries made into each case before a policy is granted, great benefit might arise to the insurers without ending in the ruin of the adventurers.—*Insurance Journal.*

Financial.

TORONTO STOCK MARKET.

(Reported by Pellatt & Osler, Brokers.)

The market has been inactive for the past week, partly on account of so many of the transfer books being closed for dividends payable on the 1st of next month.

Bank Stock.—150 is offered for Montreal ex dividend, without sales. There were small sales of British at 105½, it is now offered at 106. For Ontario 97½ ex dividend is offered, without transactions. There are buyers of Toronto at 118½, no stock on the market. The Royal Canadian suspended specie payment on the 21st inst.; various prices are named for the stock, from 10 to 40 per cent, but we believe no sales have been made. There were sales of Commerce at 102½ to 103, closing firm and in demand. Buyers offer 35 for Gore, with sellers at 36. Merchants' has advanced closing with buyers at 109 and sellers at 109½. City is offered at par ex-dividend. There are buyers of Du Peuple at 108 and of Nationale at 106, no sales of either. Mechanies' could be placed at 93½, but sellers ask 94. Buyers would give 106½ for Union, none in market. Nothing doing in other banks.

Debentures.—Canada sterling six per cents sold during the week at 105, and Dominion stock at 108½. Toronto are offering at rates to pay about 7 per cent to purchasers. Little demand for County.

Sundries.—City Gas is offered at 107 without demand. Small lots Canada Permanent Building Society are offered at 126, with buyers at 125½; some sales of Western Canada were made at 120½ and 121; 112 exdividend is offered for Freehold. There are sellers of Montreal Telegraph at 135½ and buyers at 134½. Canada Landed Credit, nominal. Several large mortgages are offering to pay 8 per cent. Money continues close and high rates are paid on first-class mercantile paper.

ROYAL CANADIAN BANK.

This Bank closed its doors on Friday morning the 21st inst. The first intimation that the general public had of the position of affairs was communicated by the following notice, posted on the windows of the banking house :

Royal Canadian Bank.—This Bank has, for the present, suspended specie payment. By order of the Board, T. Woodside, Cashier. Toronto, May 21, 1869." During the day the directors issued the following circular ;—

To the public.

The Directors of the Royal Canadian Bank regret that the action of the Hon. Donald McDonald, in issuing a circular to the shareholders, has had the effect of shaking public confidence in its stability, and causing a large withdrawal of deposits.

The assistance of a number of other banks having been sought, but declined, no other alternative was left to the Board than to suspend specie payment for the present.

The Directors would urge upon bill-holders and depositors not to be alarmed, as there is not the slightest danger of loss to them, and many hopes are entertained that within a short time the business of the Bank will be resumed.

They may further state that, having the assets carefully estimated, and all known losses deducted, there is still a surplus over the paid-up capital intact. A statement of the affairs of the Bank will be prepared and published as speedily as posible. By order of the Board,

T. Woodside, *Cashier.*

The following statement of the affairs of the Bank for the month ending May 15th, has also been issued :

CAPITAL	
Capital authorized by Act	$2,000,000 00
Capital paid up	1,103,728 34
LIABILITIES.	
Promissory Notes in circulation not bearing interest	887,916 00
Balances due to other Banks	38,731 01
Cash deposits not bearing interest.	370,113 78
Cash deposits bearing interest	633,671 57
Total liabilities	$1,930,432 36
ASSETS.	
Coin, Bullion and Provincial Notes.	185,629 81
Government Securities	128,911 10
Promissory Notes or Bills of other Banks	68,737 98
Balances due from other Banks	273,467 83
Notes and Bills discounted	2,643,590 02
Other debts due to the Bank not included under the foregoing heads	83,817 58
Total assets	$3,384,154 33

Profits of Banking.—Twenty-four of the Philadelphia banks have declared their semi-yearly dividends. One of the banks—the Fourth National—which usually divides its profits at this period, having met with serious misfortunes which swallowed up a greater portion of its capital, wisely abstained from any attempt to make a division of profits. Taking the dividends for the year, it must be confessed that bank stock pays well. The Kensington bank has divided twenty-five per cent. in the last year ; the Southwark bank twenty per cent. ; the Northern Liberty bank twenty per cent. ; the Philadelphia bank fifteen per cent. ; the Mechanics' bank sixteen per cent ; the Germantown National fifteen per cent.; the Western fifteen per cent.; the Corn Exchange fourteen per cent. Eight and a half per cent. is the lowest sum declared, and a greater proportion of the banks pay ten and twelve per cent. These dividends are clear of taxes, and they show that our banking institutions, with one exception, are carefully conducted. They furnish constant and satisfactory profits to the owners.—*Philadelphia Commercial List.*

Railway News.

Great Western Railway.—Traffic for week ending May 7, 1869.

Passengers	$28,396 96
Freight	47,208 70
Mails and Sundries	2,252 12
Total Receipts for week	$77,857 78
Coresponding week, 1868	76,732 48
Increase	$1,125 30

Northern Railway.—Traffic receipts for week ending May 15, 1869:—

Passengers	$2,468 70
Freight	14,196 14
Mails and sundries	389 24
Total receipts for week	$17,054 08
Corresponding week 1868	14,813 55
Increase	$2,240 53

Mining Lands.—The following appears in the Nova Scotia Royal *Gazette.*

Crown Land Office, April 23th, '69.

Mining Leases on Crown Lands, in the Counties of Charlotte and Victoria, will be offered for sale by Public Auction, at this Office, at noon, on Tuesday the 25th day of May next, agreeably to the following conditions :

Upset price, $20 per lot.

1st.—Every Mining Lease to be exempted from Royalty for five years from its date.

2nd.—That the right of Mining within a Tract of one Square Mile, for the term of twenty-five years, be put up at a fixed rent of twenty-five cents per Chaldron on Coal, and five per cent. on the value of all other Minerals raised, to be paid on the first day of January, April, July and October in each year after the fifth, to the Receiver General, or an agent to be appointed by the Governor.

3rd.—That the upset preference price for each Lot be twenty dollars.

4th.—That the preferenee money be paid, and the ground selected within one hour after the time of sale, after which other lots will be offered, if required, in like manner.

5th.—That the Lease contain a clause of renewal or that the Government may resume and take the improvements at a valuation to be made by Arbitrators mutually chosen by the Surveyor General for the time being, and by the Lessee or his Assigns.

6th.—That if the Lessee shall not actually raise Coal or other Mineral, to the value of four hundred dollars, from his ground within any one year (the first five years excepted) during the continuance of his Lease, the same shall become forfeited.

W. P. Flewelling, *Sur. Gen.*

Suffolk Mine.—Last week Gen. Adams sold in Boston, 10,000 tons of low grade copper from this mine at $22.50 per ton. This ore, which has formerly been considered of very little value, is now used for manufacturing sulphuric acid.—*Sherbrooke Gazette.*

THURSDAY, MAY 27, 1869.

THE CANADIAN CANALS.

II.

The writer upon the Canadian Canals cannot too highly estimate the importance and difficulty of the subject. Possibly there is no more branch of practical economy which has more bearing on the well-being of the Province, and certainly there is no one less understood. Indeed, as a rule, the subject is lost sight of by Canadian journalism, and there are few circumstances to give it adventitious interest. It is only when some special claim is made to public support, that the least attention is aroused; and then the influence is not healthful. The two schemes, the Ottawa navigation and the Georgian Bay Canal, are cases in point. In both instances there were earnest hearty advocates, and as their efforts were continued, so proselytes were gained. There are very few men who can resist the appeal to their interest put in convincing language. "Here is this scheme, sure to go—it has this and that support, and is of "great national benefit—look at the statistics "—count up the results," and a formidable sheet of paper appears with tabulated statements of elaborate calculation, proving certain profit. "You see," continues the speaker, "here it is. All this money has to be spent; "there is plenty for every body; throw your "influence in with ours, and participate in "these certain benefits." Who can blame a struggling man, one not well informed on the subject, who sees the project sustained by many most estimable persons, and who is possibly himself taken with the one-sided view advanced—who can blame him, we say, if he joins in the common cry and swells the chorus? The difficulty lies in allowing canal schemes of this character to be taken up by private parties. It is precisely in this situation that the Government should intervene, for a Canadian Canal is not, and by no circumstance can be, looked upon as a private isolated effort. To our mind the difficulty in the Province has been that each canal has been more or less regarded as an individual project. Private influences have been allowed to direct and fashion in part that which should have been considered as a portion of the whole. The navigation of the St. Lawrence is a unity, in short, and anything at all discordant with the requirements which ought to govern that unity, is self-evidently objectionable. Thus the Georgian Bay Canal is quite independent of the St. Lawrence Navigation. As the Welland Canal is at present constituted, that is if the limit be maintained, it would have had one use only. At present a propeller by the Welland can carry 4,400 bbls. of flour. The proposed locks on the Georgian Bay Canal, with but moderately increased expenses, would admit a cargo of at least seven thousand barrels, cheapening of course its freight. But such a vessel must discharge at Oswego, because she could not pass through the St. Lawrence Canals, which have but nine feet depth of water. Therefore the only result which could have accrued, would have been an increase of the trade between Chicago and Oswego, thus giving Buffalo the go-by. Consequently the scheme has found opponents in the latter place, and supporters in the former cities. To the St. Lawrence itself the canal, if completed, could bring no commerce. It is indeed in its bearing anti-Canadian, and would rather carry the trade from the country. Not that there are now special inducements to take exports down the St. Lawrence. We mean, that if New York and Montreal offered equal inducements to the shippers of grain to Europe, the Georgian Bay Canal would be more to the interest of New York. As to the time taken in passing through the canal, and the time taken through the open water of the river, the following figures to us seem unanswerable. It is urged that a propeller taking the open water will have to pass over 400 miles of additional distance, which with a propeller at nine miles the hour may be assumed at 44 hours, and adding for the passage through the Welland Canal 15 hours, we have a total of 59 hours. Against this there is the Georgian Bay Canal, itself 100 miles in length, locking up 475 feet, and locking down 130 feet. As a first-class passenger steamer in the Beauharnois Canal, 11½ miles in length, with 9 locks and a lift of 82½ feet, takes six hours to pass through it, so the Georgian Bay Canal would exact from 60 to 70 hours, at the fastest rate of speed, and without the least *contretemps*. If this reasoning be correct, and we conceive it to be unimpugnable, there can be no saving of time. The gain is simply in the ability to bring larger vessels into the trade, which could not get out of Lake Ontario; and this result is to be effected at a cost of from twenty to thirty millions of dollars. So incomplete is the project, that one of its earliest and ablest supporters, Mr. Tully, saw the weakness of it, and declared that the improvement was only contemplated in connection with the important work of deepening the St. Lawrence Canals. The answer to this view is very plain—Why not then begin with the deepening and enlargement of the St. Lawrence Canals?

Enough surely has been said to show that a scheme of such a character is no portion of the St. Lawrence navigation proper, and as such it ought summarily to be dismissed from consideration; in any case until that navigation be brought to its extreme development. It is the recognition of such a principle as we are now striving to establish; a principle we fear only imperfectly understood. A commercial contest is now being waged. As in the old days when the French held Canada, the positive fighting arose, whether the trade with the Indians should have its passage by the waters of the Hudson or by the St. Lawrence; whether it should follow the *debouchure* of the lakes, or whether it should turn by the southern streams to the Mohawk and thence to the Hudson. These early wars in the settlement of Canada were in reality wars of trade, and it was purely to control its course that Fort Duquesne on the Ohio was constructed, to destroy which Braddock advanced so futilely—to be defeated by a handful of men. It was the recollection of these struggles which nerved the State of New York, then not over rich, and thinly populated to the extraordinary effort of the Erie Canal with its several branches. The policy of this State has been a canal policy, and it has richly earned its reward. The policy of Canada, or rather the want of policy of this country is to neglect the na

tural advantages which its geographical position offers. When the history of the last twenty years is soberly written, one of the most extraordinary features will be this systematic and unchallenged neglect. One could conceive that politicians even on the score of selfishness would have greedily clutched a subject promising honor and reward to its advocate. But the contrary is the case. Year after year passes, session after session is overladen with verbose but ill considered legislation, and not a word is said in favor of the canals. Or at best, some experiment is tried such as removing the tolls, throwing into the pocket of the forwarder the rightful due of the State. Is it that politicians cannot understand the subject? Is it that there are no means of studying it? The labor of more than one writer has placed the subject sufficiently clear; but their reward has been to see their work utterly unacknowledged and repudiated by successive governments, who love not literature or thought in any form. The matter is a puzzle. Politicians of most countries have one end in view—their own success. Now and then some great mind endowed above his fellows breaks the ranks, and some few intellects are distinguished by honest and unselfish patriotism. But looking to the list of the public men for the last quarter of a century, with the exception of the Hon. John Young, of Montreal, no single name occurs to our mind, of those who have battled for the great water communications of the country. To-day are we any better? In the preliminary discussions with regard to Confederation, the Canals were entirely lost sight of; and it is a fact that ought never to be forgotten. The 69th Resolution is as follows:

"The communications with the North-"West Territory, *and the improvements* "*required for the development of the trade of* "*the great West* with the seaboard, are re-"garded by the conference as subjects of the "highest importance to the Federated Pro-"vinces, and shall be prosecuted at the earli-"est possible period that the state of the "finances will permit."

There is a great deal of magniloquence in all this, and it would have been better to have dealt with the subject in a simple and more natural way. If the words mean anything they are a distinct and positive pledge that the Canals shall not be neglected. The North West Territory is acquired—what now about the "communications" with it? What about the "improvements for the development of the trade of the great West?"

—The Toronto and Nipissing Railway project is making satisfactory progress; a large share of the stock of the Toronto, Grey and Bruce is already taken.

USURY.

Taking up the subject where we left it last last week, we now proceed to point out the modes in which usury laws operate to raise the rate of interest. These are principally three:

1. Many capitalists who invest in loans are unwilling to run the risk of evading the law, and finding that they can use their capital more profitably in other ways, withdraw it from the loan market. The supply decreases: the demand remains the same. Every one knows that, with regard to other commodities, the inevitable consequence is that the price will rise. So will it be with regard to money, which has no peculiar or occult virtue to protect it against the operation of the laws of supply and demand.

2. The capitalists who are left in the field being those who are willing to break the law, are inevitably the less scrupulous and conscientious of the class. What the worst of this kind are we need not characterize; they are too well known. As a rule, their demands are limited only by the necessities of those whose misfortune it is to fall in their hands. So far from being satisfied with two per cent. per month (the rate which so sorely grieves our legislators), they will exact ten or twenty if they can get it. The more conscientious class of lenders being driven from the field by the operation of the law, the pressure of their competion is removed, and the others have no check upon their avariee. So that not only is the rate of interest still further raised in this way, but borrowers are consigned to the tender mercies of the hardest of the lending class—the Shylocks who, in default of payment, will exact their full pound of flesh without remorse.

3. Borrowers burthened with a tender conscience will not take advantage of the law, but, as a point of honor, will, rather than break their plighted word, pay to the uttermost whatever they promise. Those who do take advantage of such laws are the less delicately conscientious; who are not particular about violating their contracts, no matter how solemnly these may have been entered into. They will agree to pay any interest that may be asked, but when the time comes, will pay only what the law compels. A money-lender who knows his business will generally arrange matters so that this shall be whatever has been agreed upon. The ingenuity of the class has never, in the past, been at a loss to find means to do this, and there is no reason to suppose that there would be any greater difficulty in the future. It will frequently happen, however, that the law will be able to be taken advantage of, and the amount limited be all that is recoverable. This, in the most liberal of t three bills now before the Commons, is t principal only, the borrower getting the u of the money for nothing. By the Gover ment resolutions, it is six per cent. intere besides. How will this operate? Let suppose that the natural rate of interest ten per cent., and that the law is taken a vantage of in one-half the cases, in the oth half the borrower paying, either of his o accord or from compulsion, the rate agre upon. All borrowers must, at the time loan, be treated alike, and charged a ra sufficiently high to obtain the natural one the average. By the supposition, one-h will pay only six per cent.—the rate propos by the Government. To make up the d ficiency, it is obvious that fourteen per cen must be got out of the other half. Th the law, in attempting to lower the rate fr ten to six, will increase it from ten to fo teen. This would be the rise in theory. practice, however, it would be much greate for, in so uncertain a case, the lender wou take care to charge a rate sufficient to cov all contingencies, so that any error would in his own favor. This uncertainty wou cause the rate to go as high, probably, twenty from this cause alone. The sult would then be that half the borrowe would pay six and the other half twent making an average of thirteen in place ten, which it would be without the la And what is especially to be noticed is, th the extra rate will be paid by the mo scrupulously honest portion of the borrowi class.

It is clear, then, that the effect of usu laws is to raise interest in favor of the wo class of lenders, and at the expense of t best class of borrowers. Illustrations of th effect are not wanting. Thus Storch, t Russian economist, points out that wh the Empress Catherine passed a law havi the object of lowering interest from six p cent. to five, it had the effect of raising it seven. Similarly, when Louis XV. of Fran passed an edict to reduce the rate from fi to four, he caused it to rise to six. Probal the country where interest is lowest is En land, where the usury laws have been ab ished for fifteen years past, and where th is perhaps more freedom of borrowing a lending than in any other country. T usual rate at the Bank of England is two three per cent. Perhaps, however, the mo striking illustration is afforded by the exp rience of our own country. In 1858, ju before the abolition of the usury laws, wh the limit fixed by law was six per cent., t actual rate on first-class mortgage secur was from twenty-five to thirty per ce This is a notorious fact, well known to eve lawyer and capitalist in the habit of deali

ith mortgages at that time. The repeal of he law caused an immediate fall in the rate, hich in the next two years went down to fteen per cent., and has been steadily de- ending ever since, until now it is about even or eight per cent., the lowest, we be- eve, ever reached in the Province. This normous difference is almost altogether ving to the repeal of the law, and in par- cular to the large additional capital which as been thrown into the loan market in con- quence. In a country like ours, where pital is comparatively scarce, any restric- on upon its circulation will inevitably give se to far more disastrous consequences than countries where it is comparatively entiful.

The absurdity of fixing a limit to a thing fluctuating as the rate of interest, is rther shewn by the extremely wide varia- ns which have taken place in it at different nes and places. In ancient Athens, by the vs of Solon (B.C. 594). the rate of interest s not restricted. It varied from about ten r cent. to sixty. The average was about hteen, which it was in the time of Demos- nes. Twelve per cent. was always con- ered a low rate. At Rome, by the laws the Twelve Tables (B.C. 453), the rate s fixed at twelve. Far higher rates, how- r, were paid in practice, and the law was ill observed that it became obsolete, and ess than one hundred years had to be re- cted. In 347 B.C., the limit was reduced ive, and a few years afterwards the re- t of any interest whatever was prohibited a law which was, of course, completely at naught. By Justinian, the taking of rest was again legalised up to four per t. In the Middle Ages, in spite of legal alties, of spiritual censure, and of popu- odium, usury was everywhere practised, , as a consequence of the restrictions n it, at extremely high rates. In Eng- the Common Law, supplemented by ous statutes, prohibited the taking of any rest. This was first legalised, as one of consequences of the Reformation, by the 37 Henry VIII., c. 9 (1541), which fixed limit at ten per cent. This Act was re- ed, and the receipt of interest again made l, by 5 and 6 Ed. VI., c. 20 (1552.) teen years' experience of this Act was gh. Accordingly it was, in its turn, pealed, and the Act of Henry revived, the being again fixed at ten per cent. This done by 13 Elizabeth, c. 8 (1570.) The uble to this Act is instructive. Speak- of the Act of Edward VI., it says :— hich said latter Act hath not done so ch good as was hoped it should, but her the said vice of usury, and specially way of sale of wares and shifts of in- terest, hath much more exceedingly abound- ed, to the utter undoing of many gentle- men, merchants, occupiers, and others, and to the importable hurt of the Common- wealth." By 21 James I., c. 17 (1623), the rate was lowered from ten per cent. to eight. During the Commonwealth it was re- duced to six, which was confirmed by 12 Charles II., c. 13 (1660.) In Scotland, in like manner, before the Reformation, no in- terest was allowed. After that event, and in 1587, the restriction was removed, and the rate fixed at ten per cent. In 1633 it was reduced to eight, and in 1661 to six. After the union of the two kingdoms, the Act 12 Anne, c. 16, fixed the rate at five. No alter- ation was made in the law till Wm. IV., when it was somewhat relaxed; and finally, in 1854, by 17 and 18 Vic., c. 90, the usury laws were totally abolished. The natural fluctuation of interest is also shown by the Bank of England rates. Within the last few years they have varied from less than two per cent. to upwards of ten. The average rate, however, has been considerably less than before the Act of abolition. It seems, therefore, that, in the old country at least, it is at last recognized, even by politicians, that the true and only way by which to re- duce the rate of interest to its lowest point, is to leave capital and borrowers and lenders to the free and unrestricted operation of the natural laws which govern them.

Another mischief which is to be charged against usury laws, being of a very serious character, must not fail to be noticed. We refer to their effect in retarding the develop- ment and industrial progress of a country. The main element of progress in a new coun- try is the opening of new branches of indus- try and of new channels of trade. These, because new, and therefore untried and un- known, are necessarily more hazardous than the old and well-tried ones. Now, capi- talists will not lend their money for the purpose of investment in enterprises of extra hazard without an inducement in the shape of extra interest, which, being prevented by law, the consequence is that new branches of industry languish for want of the necessary support. We have not the slightest doubt that to our former usury laws is to be attri- buted much of the want of energy and enter- prise with which we have been so often twit- ted by our American neighbors. If there is no such connection as this, it is certainly a very remarkable coincidence that the rapid development of such hazardous enterprises as those connected with petroleum, salt, and mining for gold and other minerals, should follow so closely on the heels of the repeal of our usury laws. Again, look at other coun- tries, where the religious prejudice against usury still exists. In Mohammedan nations this prejudice is still as strong as ever, their religion absolutely forbidding the receiving of any interest. In Roman Catholic coun- tries the same feeling still has some vitality, and though not so strong as formerly, yet is much stronger than in Protestant countries. Compare, then, the industrial and commer- cial torpor of such countries as Turkey (the sick man), Spain, and Italy, with the life and activity of England and the United States. We have seen what, during the Middle Ages, was the popular doctrine in regard to interest. There is no need to shew further, how, dur- ing that long night, and while the doctrine reigned supreme, the whole frame of indus- try, trade and commerce shrivelled up and withered beneath the curse of its blighting influence, and was paralysed into a stillness as of death. From facts such as these we may form some notion of the evil in these respects which usury laws occasion.

Another charge which we have to bring against these laws, is that they are an in- fringement upon the rights of property, being an attempt to dictate the terms upon which a man shall deal with his own.

In short, in whatever aspect usury laws are regarded, they are seen to be productive of mischief, and mischief only. They belong to the same class with those which were fre- quently passed in times gone by, to regulate wages and the price of food. The same evils and the same inherent absurdity belong to both.

As we said before, we are unwilling to im- pugn the motives of those who are moving in this matter; but the facts and arguments which we have given are so indisputable, that it is impossible to do other than ascribe to these men, one of two things, either that they are grossly ignorant of all that has been writ- ten on the subject about which they propose to legislate, or that, for reasons best known to themselves, they wish to raise the rate of interest throughout the country. We hope that there is, in the Dominion, sufficient intel- ligence and public spirit to prevent the in- tended wrong.

THE ROYAL CANADIAN BANK.

On the 21st this bank suspended specie payments. We were aware prior to last week's issue of this journal that such a step was contemplated, but as negotiations were in progress which might have prevented it, we did not feel justified in contributing in any way to such an undesirable result. A glance at the returns for the last two months was sufficient to show that the process of de- pletion was going on steadily. Between the 1st March and 15th May, the reduction was as follows :—

Circulation	$625,150
Debts to Banks	3,703
Deposits on call	256,876
Deposits on interest	329,898
Total	$1,215,627

So that from the 1st March up to the time of suspension, no less than a million and a quarter of gold was paid out. That it was possible for the bank to sustain such extreme pressure for so great a length of time, certainly speaks well for it.

The question naturally arises—what caused this sudden strain upon the resources of the Royal Canadian? We have no hesitation in saying that it is directly traceable to a want of confidence in the management. There were those on the Board whose names were a source of weakness rather than of strength. They were objectionable to many. Whether they deserved this or not we do not pretend to say, but it must be admitted that antecedents have a great influence on public opinion when men are placed in positions of trust. However, the fact is there, that the Board did not command confidence, and that in time of trouble, the want of it proved disastrous. But there is another consideration. There has been all along a seeming lack of harmony among those who controlled the institution. Internal quarrels and disputes arose, and the bank interests were insensibly sacrificed to the petty vanity of those who should have known better than attempt to display it in such a sensitive quarter. This objectionable feature culminated in the circulars of Mr. Macdonald, the Vice-President, who chose the worst possible time to avenge himself of his colleagues, for his insinuations and statements gave the finishing stroke to the hesitating confidence which kept the institution afloat. A depositor or note-holder does not stop to argue out the merits of such discussions; he merely says to himself, there is doubt, and though everything may be right, self preservation is the first law of nature. Who can wonder that suspension should have been the result of all this. Had Mr. Macdonald himself acted in an honest manner, and from pure motives, and, first exhausted all legitimate means of putting a a stop to abuses before coming before the public, we should not find fault. But as the contrary fully appears, we cannot do other than condemn as inexcusable his conduct throughout. Under the circumstances, we are disposed to think that suspension is the best thing that could have happened the institution, for it will bring all parties to their senses. Directors will now understand that public confidence is not to be trifled with, and shareholders will have fully illustrated the necessity of exercising judiciously their power of choice.

While we are thus disposed to lay blame on the management we can find no excuse for the course of conduct pursued by the Bank of Montreal to this Western institution. The ruin of a bank means wide-spread individual loss and general commercial disaster. It throws business out of gear and affects too many to render such an occurrence a matter of joke. When one bank in Canada attempts to destroy a rival it seeks to bring about a national calamity, and we should hesitate to say that the Bank of Montreal, the financial agent of the Government, did deliberately contemplate such a thing were it not that the facts scarcely admit of any other explanation.

Notwithstanding that many evidences of, to say the least, want of friendship towards kindred institutions have been given by the Bank of Montreal, we are far from believing that it caused the suspension of the Royal Canadian, or that it has the power which some political journals seem to consider it possesses. It is quite a mistake to suppose that it is responsible for the Royal's troubles, and it is just as well to have that mistake corrected. It acted in an unfriendly spirit, no doubt, but that line of conduct should not be twisted into an exhibition of a power which in reality it has not, and, even if it had, it dare not wield.

It is, of course, a question—what is best to be done under the circumstances? From what we know of the bank's state, we incline to the opinion that every effort should be put forth to cause a resumption. The discounts do not represent very large advances, but, on the contrary, are, we believe, distributed over a large surface; so that we may take it for granted, that the percentage of good paper would be found in excess of the ordinary estimate. But as this would depend on the result of a rigid investigation, we leave it for the present. In the event of resumption, a change in the Board must be made; and, we understand, all the directors are ready to resign. Under the charter, such a wholesale resignation would let in men who are more objectionable than the present occupants, so that it will be necessary to wait until the annual meeting in July, before a change can be made.

The fact that the notes of the Royal are taken at par by traders in Toronto, is a striking commentary on the character of our present banking system, which speaks for itself, and instead of injuring the prospects or defeating the attempt now being made to substitute Government indebtedness for gold, will convince our legislators that we may be worse off than we are at present.

National Life Insurance Company of t... United States.—This company, chartered l... year by Congress, having deposited $50,665 c... with the Receiver General for the security ... Canadian policy-holders, has commenced busin... in this country. It is a stock company, wit... paid-up capital of one million of dollars; a... from its connection with the well-known banki... house of Messrs. Jay Cooke & Co., is popula... known as "Jay Cooke's Company." The bu... ness is done upon the "non-participating, ... cash plan," there being no distribution of profi... and the premiums being all payable in ca... The rates charged are, therefore, low. In ... case of "return premium" policies, not only t... amount insured in the first instance, but also ... the premiums paid are returned at the matur... of the policy. The policies are non-forfeitable.

This company has met with a good deal of ... position in various quarters, chiefly on the grou... that it is a stock company; but it has m... rapid progress. By a statement we have seen, ... appears that for the nine months the compa... has been in business, up to the end of April la... 4,791 policies were issued, amounting to $1... 653,500, on which the premiums were $562,831.

Agents are being appointed in the various cit... and towns, and every effort will no doubt ... made to push the company's business in t... Dominion.

Commercial Union Assurance.—We p... at this late date the annual report and the p... ceedings had at the annual meeting, which w... be found interesting. The business of this wealt... company is making satisfactory progress.

(From a Correspondent).

London, 8th May, 1869.

Commercial men regard the immediate fut... with unconcealed apprehension. The state of t... continent is not satisfactory. Prussia and Fra... have not yet agreed to give an indisputable tok... of their love for peace by disbanding soldiers a... diminishing the outlay for munitions of war. ... Italy the deficit has become chronic. Spain ... not yet completed her revolution, and is in ... mean time hard put to it in order to meet necess... expenses. The Turks are about to borrow mo... wherewith to discharge their pecuniary obligatio... and Russia has tried, but in vain, to persuade ... capitalists of England to advance additional su... for the purpose of constructing railways which w... never pay in a commercial sense, but which w... prove serviceable for the transport of troops. T... outbreak of war would readily shake the fabric ... European commerce. It is hoped rather th... believed that the beginning of hostilities is a ... mote contingency. Men flatter themselves th... the longer the fatal hour is postponed the less c... tain does its arrival become. Before the lapse ... many months, the question of peace or war w... be definitely answered. The armed truce is ... costly to last. This consideration is not one whi... has suddenly received attention from speculate... They have been calculating the chances of a c... tinental war for some time back. But they ... not take into account the possibility of hostilit... breaking out in other quarters of the globe. T... a war between the United Kingdom and the Uni... States would break out is a notion which har... one person in the thousand has regarded as ot... than a horrid but an idle vision. However, ... great change has taken place in the views ent...

ained here on this score. It is perceived that not few influential persons in the United States are ndering to the prejudices of the poorer or less ducated class, and that, if this course be per-isted in, the issue cannot be doubtful. If it e the intention of President Grant to pick a quar-el with this country, in the hope that he may ttack and absorb Canada, he has sadly miscalcu-ted his opportunity. Such speeches as those elivered by Mr. Sumner and Mr. Chandler have ad an effect their authors may not have foreseen. oud bluster and open threats have never yet per-uaded Englishmen to follow in an appointed path, or will these means prove effectual now. Coming, these speeches do, after the contemptuous rejec-on of a treaty in which English ministers went the utmost verge of concession, they have ope-ated as insults to the national honour. I should eeply regret if the kindred or rival nations were be declared foes, were it but for a day. How-ver, if the worst must come, the chances will be gainst that nation which is the wanton and pur-oseless aggressor. In a war of conquest, or in a ar in which this country should act as the ally a foreign power, success might be imperilled by vision of opinion among the people. But let the ation be called upon to vindicate its outraged nour and to defend any portion of its violated mpire, the unanimity of sentiment would sur-ise the world as well as tend to render victory rtain.

Did I not know that in the highest and best in-rmed quarters a feeling of uneasiness prevails, I ould not have treated the question of war be-een this country and America as one of any oment. This much, I may say, without fear of e result proving me a false prophet, and that is, e tone of our Government will be firm and cided should the new American Ambassador efer unreasonable demands. Indeed, Mr. Mot-y will find that the responsible advisers of the own can say "No" with as great coolness and cision as the President of the United States mself. It is probable that as this is now nown at Washington, the proposals of Mr. Mot-y will be neither startling nor inadmissible. This my opinion, but it is an opinion which does not evail with the money market. The desire to get l of United States securities is as great at this oment as it was a few weeks ago to obtain pos-ssion of them. The investors as well as the eculators have taken fright. If the chances of e peace being broken were to increase, the con-ence of the foreign holders of these bonds would undermined. What will hasten the re-action, p the flow of the bonds to European markets, d cause thousands to return whence they came, the increase in the value of money. In a few ys the Bank rate of discount will be raised ain, that is from 4½ to 5 per cent. As a conse-ence the business of the Joint Stock Banks will rive, the dividends paid by them will increase, d the attractions of the 5-20 bonds be materially minished in the eyes alike of the bold speculator d the prudent investor.

As was forsseen by many persons here, the terms which the Hudson's Bay Company surrenders eir sovereign rights are considered objectionable a section of the Canadian press. The worst rt of Earl Granville's proposal is that relating the reservations of land. In the published rrespondence between the Canadian Ministers d the Colonial Office, exception is taken by em to this part of the scheme. I read in your wspapers that bad though it may be to pay such um as £300,000, it is infinitely worse to give e Company one-twentieth part the future town-ps in the Fertile Belt, and that a large payment de now for the whole would be economy in the g run. Now, if this view were to prevail in anada, it might find acceptance here also. I have od grounds for stating that some of the largest reholders would not object to taking a sum of ney instead of retaining an interest in the land. difficulty would be to persuade them to accept asonable sum. Yet I cannot think the obsta-cles to an arrangement are so great now as they were before Earl Granville drew up his ultimatum. At any rate, the matter might be discussed at the time when the details of the arrangement are finally settled. Of course, the offer of money must come from Canada. What should be done by those who desire the Northwestern Territory and Rupert's Land to form part of the Dominion, unburdened by conditions, is to consider the price they would pay for this. It is certainly for the advantage of the Dominion that the Company should be bought off now, because, unless that be done, the result will be envenomed and dangerous strife in the future.

The cost of messages by the Atlantic Cable is again reduced, being £2 for 100 words. A few months hence the French Cable will, probably, be in operation. It is proposed, I see, to lay a third. Now, it may interest as well as instruct many persons to learn that the reductions in the price have not proved as remunerative as was expected. When the highest price was charged, the number of messages was few, but then, the expenses were proportionately small. Each additional message requires a larger staff of messengers and others; besides, when a message has to be repeated, in order to a correct a mistake, there is a waste of time and labor which seriously affects the profits. As far as the public is concerned, their cannot be too many cables and too low rates charged. It is not always the case that what benefits the public is an unmixed blessing to shareholders.

Commercial.

The event of the week in business circles was the suspension of the Royal Canadian Bank, which closed its doors on Friday morning, the 21st inst. The occurrence caused some commotion, but the business public generally were not unprepared for the event, a knowledge of the difficulties of the bank's situation being pretty generally diffused. Had the suspension occurred in the height of the produce season it would have been much more severely felt, as the bank had a very considerable run of produce business. Owing to the dullness of the market just now, there is very little produce paper stirring, the dealers have adopted a conservative policy and do not care to do much business till prices settle to the bottom and the trade assumes a more satisfactory shape. The dullness of the winter and spring in other branches of trade has led to a general curtailment of obligations in that quarter, also, so that the present moment finds the business houses of Toronto in a favorable position to meet a shock of this kind. The bills sold to some extent on morning of the suspension at from 50 to 75 per cent, but soon went to 80 and 90 and even 95 per cent (some retail shops taking them at par for goods); no doubt the general belief that little loss will be suffered by either bill-holders or depositors together with some hope that the bank may resume, has had much to do with mitigating the evil consequences of the disaster.

The failure of Mr. Wm. Hughes, of Brampton, a day or two previous to the bank suspension just noticed, involved several wholesale firms here in losses ranging from $1,000 to $3,000. He did a general store business and operated in grain to a considerable extent; liabilities stated by him at $69,000 and assets at $73,000. He has proposed a compromise with his creditors at 50c. on the dollar.

The wool season is just opening, but the late advance in gold operates against business, so that buyers do not offer more than 26c. for washed fleece. Unless the gold premium declines from the present quotations we shall have a much duller season than was otherwise anticipated.

Toronto Market.

Under so many depressing influences trade could not be otherwise than dull, and no improvement of consequence need be looked for till the fall business sets in.

Leather.—The demand for leather has fallen off and the market is dull.

Hides.—Prices have taken a decided tumble involving holders in considerable losses, and prices are likely to go still lower.

Produce.—The tendency of the market is decidedly downward both in flour and wheat. The stock of wheat in the principal American markets is much larger than last year, Chicago and Milwaukee had on the 15th 1,757,000 bush. against 883,000 last year, and 308,000 the previous year. New York had 914,700 bush. against 813,699, and 731,330 in 1868 and 1867, respectively. These increased supplies, and the continued reports of a fine harvest in prospect, fully justify the steady fall in prices. Fall wheat one year ago sold at $1.80 it is now worth $1; spring sold at $1.60 and now at 95c.; superfine flour was worth $6.90 and may be quoted now at $3.90. *Wheat*—Receipts, for the week, 18,839 bush.; 26,467 bush. last week and 4,100 bush. for the corresponding week last year. Spring is dull, only a small demand at 95c. Fall nominal, no buyers, holders ask $1 to $1.05. *Barley*—No receipts, little stock and nothing doing; it is nominally lower at 75 to 80c., the decline is partly owing to the advance in gold. *Peas*—Receipts. trifling, nominal at 65 to 70c. *Oats*—Receipts 1,200 bush., and 4,200 bush. last week. The market is easier at 54 to 55c. owing to a better supply. *Corn*—There were sales of carloads at 60c.

Flour.—Receipts 750 bbls.; 1,750 bbls. last week and 700 bbls. for the corresponding week of last year. There is not much flour offering, and there is no demand except for local use; spring wheat flour may be quoted nominal at $3.90 to $4.05, the latter being for spring wheat extra. In the other grades there is nothing doing to establish prices. *Meal*—Quiet at unchanged quotations.

Provisions.—*Butter*—New butter is coming in more freely, but as there will be no demand for export for a good while yet, the market is dull; no demand for lots, holders ask 14 to 15c. for packages and large rolls; small rolls for retail purposes are worth 15 to 17c. *Eggs*—Are in bettter supply and sell at 13c. *Cheese.*—Nominal, the last wholesale transaction was at 15c. *Pork.*—Is in light stock and very few hands; mess by the carload is held at $26; in small lots, $26.50 *Bacon.*—Rough is moving off more freely at 12c.; Cumberland sells at 12½c. *Ham.*—Smoked are selling in a small way at 14c. for smoked and 16c. for smoked and covered.

Freights.—the rates by vessels are unchanged; to Oswego, 3c U. S. Currency; to Kingston, 2c gold; to Montreal via steamer, 7 to 8c.; flour to Montreal, by steamer, 20 to 25c. Lumber to Oswego, $1.50 U. S. Currency. The steamer Her Majesty will shortly leave for Halifax, her cargo is already contracted for.

The following are the Grand Trunk Railway Company's summer rates from Toronto to the undermentioned stations, which came into force on the 19th ult.:—Flour to all Stations from Belleville to Lynn, inclusive 25c; grain, per 100 lbs., 13c; flour to Prescott, 30c; grain 15c; flour to all stations between Island Pond and Portland, inclusive, 75c; grain, 38c: flour to Boston, 80c, gold; grain 40c; flour to Halifax, 90c; flour to St. John, 85c.

Halifax Market.

Bread Stuffs—May 18—The demand for Supers for the past week has been quite equal to supply. Stocks continue light, but prices have again receded about 10 cts. Extras continue unchanged, forced

sales only being effected, in limited amount, at nominal prices. Fancy meets with limited request, at quotations. No. 2 dull and unchanged. Rye Flour, without enquiry, K. D. Cornmeal in request. Stock light. Oatmeal is coming forward freely, and stocks are now largely in excess of last year's, with a very limited consumption, comparatively.

We quote White Wheat Extra.—$5.75 to 6.00; Fancy $5.50. Supf. $5.30 to 5.40; No. 2, $4.50 to 4.75. Cornmeal $3.80 to 3.90; Oatmeal (N.S.), $6.00; Canada $6.50; (dull). Rye Flour $4.76; White Beans $2.50;

Fish and Oil.—We note no quotable change in above, there being no transactions to report. Large catches of superior Codfish are reported from Western Shore, which may influence prices slightly though the requirements of Boston and the want of stock here are likely to give tone to the market.

Exchange.—Bank Drafts London at 60 days at 13 P℃. Montreal sight 4 P℃. New York Gold 4 P℃. Currency 21 P℃. disct. St. John, N.B. 3½ P c. prem.

Demerara Sugar Market.

The following is from Sandbach, Parker, & Co's. Market Report, dated, Georgetown, Demerara, 23rd April, 1869.

Sugar.—The decline advised in our last was arrested by the American advices received by that Mail, and prices have been firm with an upward tendency since; the drought is now telling severely on the yield, and the quantity of Sugar coming forward for sale is so small, that the ten vessels loading for the U. States will find great difficulty in getting cargoes; the competition amongst buyers to secure any lots offering is so keen that prices have been forced beyond what latest quotations from America would warrant, and must result in a loss to shippers. These remarks refer more particularly to Vacuum Pan, the demand for Muscovado is not so animated.

Molasses—Has advanced considerably, and the demand for both Vacuum and Muscovado is very brisk.

Rum—Very little doing, holders prefer shipping to accepting rates offered here; we have not heard of a single transaction of consequence.

Transactions have taken place during the fortnight at the following rates:—

Sugars (package included) sold by 100 lbs. Dutch, 10 per cent. tare.

Muscovadoes, equal to No. 8 Dutch Standard $4.00 ₱ 100 lbs.		
No. 10 do. $4.50	"	
" 12 do. $5.25	"	
Vacuum Pan No. 12 do. $6.50		In hhds. of about 1800 lbs. each.
" " 14 do. 6.75		
" " 16 do. 7.25		
" " 17 do. 7.40		
" " 18 do. 7.70		

Molasses (package included, sold by Imperial gallon.)—

Muscovado, from 22 @ 29 cents, as to color and density	In puns of 100 gals.
Vacuum Pan from 25 @ 38 cents, as to color and density	
Rum (colored, package included, sold by Imperial gal. from 25 per cent, @ 38 overproof 40 cents.	Ditto.
From 38 per cent. @ 40 overproof, 45 cents.	

Cotton Bales.

The following is an extract from a circular of the Manchester Board of Trade:—We have never known a period when there was such irregularity in the weight of American bales, as is now apparent. We find the variation per bale to be from 1½ cwt to 4½ cwt in the same lot, and the average weight of bales is decidedly lighter than last year. And not only so, but there never was a time, in our opinion, when American cotton was so dishonestly packed and so abominably ginned. The very same condemnation of quality applies to Brazilian. Egyptian cotton, in weight of bales, ranges from 3 cwt to 6 cwt, and the mere report of the number of bales would be utterly fallacious as regards the quantity. It is of vital importance to the trade that the weight should be declared.

Sugar Movement.

The Havana *Weekly Report* says of the sugar movement. The receipts at the warehouses from 1st January to date amount to 879,436 bxs, against 959,380 bxs during the same period in 1868; the exports up to date from Havana and Mantazas exceed those of last year by 48,079 bxs; and the stocks at both ports to-day amount to 359,382 bxs, a decrease of 126,571 bxs when compared with those at same date last year.

Insolvents:—Andrew Crawford, Montreal, Lactance E. Lamarche, Montreal; Jos. Dolan, Port age Du Fort; Samuel Clark, Logan; Jno. Held, Berlin; John Raine, Brampton; Mary Neagle, Arthur; Andrew Woodcock, Toronto; Harris, Scarff & Co., Owen Sound; J. S. Ratherson, Almonte; David Ross, Treeswater; C. Ives. Ascott; Edward Bingham, Bradford; C. Turner, Brantford; Donald J. O'Brien, L'Orignal; Charles Jones Mills, London; R. Malcolm, Kincardine; S. Smith, Guelph; Michael J. Doherty, Montreal; J. D. H. Fenner, Buckingham; William How, Toronto; Adam Oliver Buchanan, Guelph.

JAMES BROWNE. PHILIP BROWNE, *Notary Public*

"The Whitby Gazette,"

A WEEKLY POLITICAL NEWSPAPER,

PUBLISHED

EVERY THURSDAY MORNING,

IN WHITBY, COUNTY OF ONTARIO.

Having a large circulation, it is one of the best advertising mediums in the country.
Wholesale Houses will find this a valuable medium for having their announcements reach retail dealers.

GEO. H. HAM,
39-1y Editor and Proprietor.

Quebec Bank.

NOTICE.

NOTICE is hereby given that a Dividend of 3½ per cent. upon the Capital Stock of this institution has been declared for the current half year, and that the same will be payable at the Banking House, in this city, on and after the FIRST DAY OF JUNE NEXT.
The Transfer Books will be closed from the 15th to the 13th May next, both days inclusive.
The Annual Meeting of Shareholders will be held at the Bank on MONDAY, the SEVENTH day of JUNE next, at ELEVEN o'clock A.M.

By order of the Board,

J. STEVENSON, Cashier.

Quebec, April 28, 1869. 38-td

H. N. Smith & Co.,

W. J. MACDONELL,
301y MANAGER.

EDINBURGH LIFE ASSURANCE COMPANY.

FOUNDED 1823.

AMOUNT OF ACCUMULATED AND INVESTED FUNDS—OVER ONE MILLION STERLING.

HEAD OFFICE—EDINBURGH.

PRESIDENT—The Rt. Hon. the Earl of Haddington. MANAGER—D. Maclagan, Esq. SECRETARY—Alex. H. Whytt, Esq.

CANADIAN OFFICE ESTABLISHED 1857. WELLINGTON STREET, TORONTO.

CANADIAN BOARD—Hon. John Hillyard Cameron, M.P., Chairman. J. W. Gamble, Esq., L. Moffatt, Esq., Hon J. B. Robinson, C. J. Campbell, Esq. David Higgins, Secretary.

THE Edinburgh Life Assurance Company offer to the public the advantages of a Canadian as well as a British Company. They have invested a large amount of money on securities in this country, and the Toronto Local Board have full power, by an Imperial Statute, to take risks, make investments, and settle claims in Canada, without reference to the Head Office, Edinburgh. Some of the old Policies in the Company, which became claims during the past year, were settled by payment of amounts double of those originally insured, in consequence of the large bonuses that accrued on the Policies.
Every information that intending assurers may require can be obtained at the Company's Office in Toronto, or at any of the Agencies which have been established in the principal towns in Canada.

J. HILLYARD CAMERON, CHAIRMAN. (35-1y) DAVID HIGGINS, SECRETARY.

THE ONTARIO PEAT COMPANY.

CAPITAL, ... $120,000.

THIS COMPANY is PROVISIONALLY organized as follows:—

DIRECTORS:

HENRY S. HOWLAND, Esq., ... Toronto. | LARRATT W. SMITH, Esq.,..... Toronto.
JOHN FISKEN, Esq., ... Toronto. | ALFRED TODD, Esq., ...Ottawa.
EDWARD A. C. PEW, Esq.,..... .....Welland.

TRUSTEES OF THE LANDS:

PELEG HOWLAND, Esq..... Toronto. | CHARLES J. CAMPBELL, Esq..... Toronto.

TREASURERS:

CHARLES J. CAMPBELL, Esq., ... Toronto. | WALTER G. CASSELS, Esq..... Toronto.

BROKERS:

MESSRS. CAMPBELL AND CASSELLS,.....92 King Street, Toronto.

SOLICITORS:

MESSRS. SMITH AND WOOD, ... Wellington Street, Toronto.

SECRETARY:

JOHN WEBSTER HANCOCK, Esq., ...22 Toronto Street, Toronto.

The lands of the Company are 1,375 acres, in the County of Welland, of the purchase value of $55,000.

The owners of the land have taken stock to the amount of	$44,000
It is proposed to reserve for future contingencies	20,000
And to put upon the market the balance of	56,000
	$120,000

Nearly 20,000 of the said balance is already subscribed, and the rest is in the hands of the Brokers of the Company.
A Charter of Incorporation is being applied for, and the operations of the Company will commence very soon.
Subscription Books for the Stock not yet taken up lie at the office of Messrs. Campbell and Cassels, 92 King St., Toronto.
May 19, 1869.

President—WM. EDGAR, Esq., Hamilton. Vice-President—ROBERT REFORD, Esq. (Messrs. Reford & Dillon), Montreal

Secretary-Treasurer—A. McK. COCHRANE, 388 St. Paul Street, Montreal.

THIS COMPANY, with machinery now in working order and in course of construction, will be able to manufacture this year FROM TEN TO TWELVE THOUSAND TONS OF GOOD FUEL. Actual working shows—

I. That the fuel can be produced for $1.45 a ton, and with the improved machinery, at a much less cost.
II. That, for steam purposes, one ton of it is superior to one cord of wood, in the proportion of 31 to 27.
III. That, for domestic purposes, it is equal to wood or coal, and leaves very little ashes—about five per cent.

At the annual meeting of the Company in Montreal, it was decided to offer one thousand shares of Stock in Toronto. Mr. Isaac C. Gilmor has been appointed agent of the Company in Toronto, and is authorized to receive subscriptions for the Stock.

Prospectus, Map of the Property, and further information may be obtained by addressing

WOODBRIDGE S. OLMSTEAD, SECRETARY,
EDWIN W. BRYANT, ACTUARY,
JAMES GOODWIN, PRESIDENT,
ZEPHANIAH PRESTON, VICE PRESIDENT.
LUCIAN S. WILCOX, MEDICAL EXAMINER.

Organized in 1846. Charter Perpetual.

The Largest Mutual Life Insurance Company. Numbering Over 75,000 Members.

BEING A PURELY MUTUAL COMPANY ITS ASSETS BELONG EXCLUSIVELY TO ITS MEMBERS,

ASSETS, $21,000,000.—Acquired by prudent and economical management of twenty-two years, without the aid of a single dollar of original capital.

SURPLUS ASSETS, $6,361,967—All profits divided among the members. Each policy holder is a member. There are no stockholders.

ITS DIVIDENDS—Have averaged over 50 per cent. annually. Total amount of dividends paid the members since its organization, $4,397,142.

ITS SUCCESS UNPARALLELED—It has arrived at the extraordinary condition where the income from annual interest alone is more than sufficient to pay all the losses. Total amount of losses paid by the Company, $6,863,528.

ITS RESPONSIBILITY—For every $1 0 of liabilities it has $154 of assets.

LAST YEAR'S PROSPEROUS BUSINESS.

Amount insured fiscal year, 1867 .....$45,647,191 00 | Income received fiscal year, 1867.....$7,530,886 19

During its last fiscal year this Company paid to its living members, and to the families of deceased members, nearly $2,000,000, and at the same time added more than four millions to its accumulated capital.

The whole record of this Company has been one of prudent management and prosperous advancement. Among the older and leading Life Insurance Companies its average ratio of expenses to income has, through its entire history, been the lowest of any.

ITS LIBERALITY—It accommodates the insured by giving credit for part premium, and grants insurance to meet all the contingencies and wants to which Life Insurance is applicable.

It issues policies on a single life from $100 to $25,000.

MEDICAL REFEREES—J. WIDMER ROLPH, M.D.; H. H. WRIGHT, M.D.

LIFE ASSOCIATION OF SCOTLAND.

Invested Funds Upwards of £1,000,000 Sterling.

THIS Institution differs from other Life Offices, in that the BONUSES FROM PROFITS are applied on a special system for the Policy-holder's personal benefit and enjoyment during his own lifetime, with the option of large bonus additions to the sum assured. The Policy-holder thus obtains a large reduction of present outlay, or a provision for old age of a most important amount in one cash payment, or a life annuity, without any expense or outlay whatever beyond the ordinary Assurance Premium for the Sum Assured, which remains intact for Policy-holders' heirs, or other purposes.

CHIEF OFFICES—19 and 20 Cornhill, London, England, and 335 and 337 St. Paul Street, Montreal.

ORLAND, WATSON & CO., General Agents for Canada. FRED. COLE, Secretary.

CAPITAL.....£2,500,000 STERLING.

LIFE DEPARTMENT.

The LIFE FUNDS are entirely separate, and are invested in the names of special Trustees.
ECONOMY OF MANAGEMENT guaranteed by a clause in the Deed of Association.
80 PER CENT. OF PROFITS divided among participating Policy-holders.
BONUS declared to 1867 averaged £2 2s. per cent., equalling a cash return of about every THIRD year's Premium.

FIRE DEPARTMENT.

Assurances granted on Dwelling-houses and their contents, as well as on General Mercantile Property, Manufactories, &c.

W. M. WESTMACOTT, Agent for Toronto.

Agents in the principal Cities, Towns and Villages in Canada.

Insurance.

Briton Medical and General Life Association,

with which is united the

BRITANNIA LIFE ASSURANCE COMPANY.

Capital and Invested Funds.....£750,000 *Sterling.*

ANNUAL INCOME, £220,000 STG. :

Yearly increasing at the rate of £25,000 Sterling.

THE important and peculiar feature originally introduced by this Company, in applying the periodical Bonuses, so as to make Policies payable during life, without any higher rate of premiums being charged, has caused the success of the BRITON MEDICAL AND GENERAL to be almost unparalleled in the history of Life Assurance. *Life Policies on the Profit Scale become payable during the lifetime of the Assured, thus rendering a Policy of Assurance a means of subsistence in old age, as well as a protection for a family*, and a more valuable security to creditors in the event of early death; and effectually meeting the often urged objection, that persons do not themselves reap the benefit of their own prudence and forethought.

No extra charge made to members of Volunteer Corps for services within the British Provinces.

☞ TORONTO AGENCY, 5 KING ST. WEST.

Financial.

DEBATE ON THE BANKING SCHEME.

The banking resolutions were brought up in the House of Commons, in Committee, on Tuesday night, the 1st June, for discussion.

Mr. Holton rose and argued at length in favor of delay, He charged the Minister of Finance with having gone beyond the limits of prudence in referring to the insecurity afforded to the country by the present banking system. He defended the present banking system at some length, and concluded by moving an amendment to the resolutions, postponing the further consideration of the subject till the next session.

Mr. McKenzie seconded the amendment. He believed the policy of the Finance Minister would be disastrous to the commerce of the country, and especially of Ontario. There was, in his opinion, nothing whatever to recommend the changes proposed. The press displayed an unanimous hostility to the measure such as had never before been seen in reference to any measure, great or small, which had ever been proposed in Parliament. Petitions from almost the entire commercial community, from one end of the country to the other, had pouredin to Parliament against the measure, and not a single petition, to his knowledge, had been presented in its favor. He believed the disasters experienced by the banks in the past few years were the direct result of government interference with the banking institutions of the country. By next session the people would be able to pronounce an opinion upon the scheme, and if it was a good one, the Government would profit by the delay. If carried into effect, the scheme would bring about one of the most disastrous periods ever experienced in the history of the country.

Mr. Cartwright followed. He regarded the amendment as dictated by partizan feeling; and as it was designed as as a vote of censure on the Government, it could not be accepted by the supporters of the Government. The question had not been sprung on the House, and the plan was not unalterable, like the laws of the Medes and Persians. On the contrary, the Finance Minister had invited members to favour him with their views and opinions on the subject. He then proceeded to state his objections to the scheme. Before doing so, he wished to know the determination of the Government as to whether the banks would be allowed to purchase the securities in the open market, or direct from the Government; and also what was the penalty if a bank fell short in its reserve.

Mr. Rose replied that these matters of detail could be settled afterwards.

Mr. Cartwright continued. He approved of a a uniform system of currency, but if we had to pay for that uniformity by the shattering and convulsing of the whole monetary system of the larger portion of the Dominion, and the destruction of the elasticity of the currency, we would pay too dearly for it. There was great danger that these results would be experienced. The result of this scheme would be the universal cessation of the power of issuing notes on credit. He had made some calculations, showing the extent to which the Upper Canadian Banks would be affected by this measure. On the 31st March, 1869, the capital of the four principal banks then existing in Ontario, the Bank of Toronto, Ontario Bank, Royal Canadian Bank, and Bank of Commerce, amounted, as nearly as might be, to $5,000,000. Their circulation at that time was about $4,000,000. Their resources of all kinds in cash, Government securities, notes and Bank balances was $4,400,000, Their total liabilities amounted to $12,250,000. Now the House would observe that their reserves, to the extent of $4,400,000, were not held against the circulation of 4½ millions, but against the total liabilities of 12¼ millions; and it would be absurd to say that in order to protect their circulation they could safely denude themselves of all those reserves and disregard the risks they might run from the withdrawal of deposits. On the other hand, to shew how little the withdrawal of circulation would affect the Lower Canada Banks, he stated that at the same date the Bank of Montreal, against a total liability of 14½ millions, held cash assets, including bank balances, of nearly 10 millions, and had no circulation at all to protect. From the calculations he had made, it appeared that so far from two or three millions additional being all that was required to be provided by the Ontario Banks to cover their liabilities in the event of these resolutions being passed, some eight or nine millions would be required, in order to place the Banks in the same relative position of strength in which they stood to-day. It was well to remember that if the silver currency were removed a large increase of bank circulation would be required. If Ontario continued to prosper all the natural increase of banking capital on which the Finance Minister relied to fill up the gap caused by this measure would be more than required for the growing business of the country. The measure would necessarily affect Ontario. In Nova Scotia the lowest bank note was $20, so that the bank circulation could not there be extensively diffused among the people. Losses had been suffered to the extent of, perhaps, $400,000 in all, by the suspension of banks in Ontario, but the people of that Province had made no complaints as to the inadequacy of the security. The scheme would destroy all the elasticity which our currency at present possessed. Under it the banks, for every $100 of notes would have to pay $120 of money or money's worth. The Finance Minister was about to create a gold currency, the only distinction between which and an absolute gold currency was the convenience there would be in having our current coin in paper instead of gold, which was troublesome to carry. It might be better to use gold altogether, but this system would shift the danger from circulation to deposits. Mr. Cartwright continued at length reviewing the scheme in an able speech, for even a summary of which we have not space. He concluded by asking time for the consideration of the measure in all its bearings and effects.

Hon. Mr. Tilley spoke in support of the resolutions. He referred to the petitions which he said had only 3,723 signatures, and said that in his own Province there was not a change in the law against which they could not get 3,000 signatures in a few days. He contended that an uniform currency was most desirable, and this was admitted. The stockholders of the banks would be placed in a better position than now. He then referred to the present position of bank-

ing operations in Ontario and Quebec. The banking capital of those Provinces was $30,000,000; the average of gold held by the banks was $9,000,000; the average of Government securities was $6,000,000 at 5 and 6 per cent. interest, together $15,000,000. The banks would still have $15,000,000 of their capital left. The result of the present arrangement is to give the stockholders of Ontario and Quebec $2,460,000, but the new arrangement proposed by the Finance Minister would give them $2,570,000, a gain of $110,000. If the Government securities were issued at 6, instead of 5 per cent., the comparison would be still more favorable. Then as to the accommodation to be given to the public; at present the aggregate stock was $30,000,000 gold and Government securities $15,000,000, leaving $15,000,000 stock and $15,000,000 paper, on which the banks could give accommodation under the present law. Under the proposal of the Minister of Finance there would be $30,000,000 of capital, $41,000,000 of gold, and $15,000,000 of stock, leaving $11,000,000 of stock for discount and $15,000,000 of paper, or in all $26,000,000. This made a difference of $4,000,000 only under the operation of the resolution. He did not think the banks would suffer materially from the change.

Mr. Rose defended the scheme and argued the necessity of proceeding with it. The signatures to the petitions had been obtained by the banks and bank clerks. He referred warmly to the opposition of the banks to the government. We had, he said, three different systems of banking, in operation, and members preferred that in their own respective Provinces. In reply to Mr. Cartwright he said that at the time of the failure of the Bank of Upper Canada, it had $800,000 circulation, and only $39,000 reserve, and the Commercial Bank, at the time of its failure, had a circulation of about $1,100,000. He denied that the failure of the Bank was caused by the distrust of depositors, and took the case of the Royal Canadian Bank as an illustration. In January its circulation was $1,534,000. in April it had fallen to $993,000, and when it closed its doors the circulation had decreased to $800,000. The St. John Commercial Bank had, when it failed, a circulation of $300,000 and only a reserve of $41,000. These failures were most serious disasters to the commercial prosperity of the country. He would call attention to the importance reserves have to circulation, as showing the tendency of the present system of diminishing the amount of deposit. In 1865, the lowest per centage of reserve was 16, the highest 43; in 1866, the lowest 14 per cent, the highest 29; in 1867, the lowest 14, the highest 22; in 1868, the lowest 15, the highest 26 per cent—showing a continual diminution of reserves in proportion to circulation. He contended that the change would not give the Government any new political power; and replied at length to the objections raised by previous speakers.

Hon. Mr. Galt opposed the resolutions; he pointed out that in various respects Mr. Rose's scheme was not so useful or safe as a direct Government issue of notes and was more expensive. Banks would fail just the same, because they could not by legislation prevent bad management. The principal objection to the scheme was the want of elasticity. He pointed out the injurious effect that would be produced on the trade of Ontario, and urged that delay be granted.

Hon. J. H. Cameron moved an amendment to the amendment as follows: "That this House recognises the great importance of having a uniform system of currency, but inasmuch as immediate uniformity cannot be obtained, it is expedient that the several Bank charters about to expire be extended to such a period as Parliament shall determine."

Mr. Morris seconded this amendment and supported it in a short speech.

Mr. Gibbs opposed the resolutions. The House then adjourned.

ASSIMILATION OF THE CURRENCY.

Mr. Savary brought up this matter in the House of Commons, on the 4th May. Hon. Mr. Rose, in reply, stated the reasons why the Government had felt it to be their duty not to issue any proclamation in accordance with the authority given them by the Act of last Session. At the time the legislation of last session was sought, there was a Bill before the American Congress, which its introducer, Senator Sherman, believed would become law during that session, and which would have had the effect of carrying out the recommendation of the Paris Conference, adopted some months ago in favour of an international assimilation of currency based on the 25 franc piece; and the American five dollar piece the English sovereign being made equal to it. The European Continental Governments had generally given their assent to this project, and our Act of last session authorized this Government also to adopt it, so soon as it should be adopted by the American Government. But since that time an entirely new phase had come over the question, in consequence of the researches by an English Royal Commission which was named about the time this House was last sitting. The enquiries made by that Commission had brought so many important facts under the notice of the European and American Governments, that the state of public opinion had undergone very considerable change with reference to the whole question; in so much so that the American Congress had deferred legislation on the subject, and a new commission had been appointed by the French, and he believed, other Continental Governments, to ascertain whether the statements made by the English Commissioners were or were not founded on fact and logical in their recommendation. The recommendation of the English Commissioners went for a good way in harmony with those of the Paris Conference. They agreed that some one coin should be taken as the standard of a currency which should be uniform among the commercial nations of the world. They agreed that the coin should be gold and not silver, and they agreed that it should be nine-tenths fine, instead of being of the fineness of the English soverign, which contained only 1-12th alloy. But in the course of their inquiries they had discovered an important fact which materially affected the calculation on which the recommendation of the Paris Conference had been based—that in France there had been a double standard, one of gold and one of silver; that there was a large amount of this silver currency in circulation, bearing a higher proportion in value in gold than it ought to do with gold nine-tenths fine—that a silver franc, for example, was worth a good deal more than one-fifth of a gold five franc piece. This important fact having been disclosed by the English Commissioners, the French Government had caused inquiries to be made with regard to it, and if the fact was found to be as alleged, the whole question would assume a different phase. The English Commissioners, while going with the Paris Conference in the first three steps he had mentioned, recommended as the standard for the proposed international currency the English sovereign instead of the French twenty-five franc piece, as the most convenient for the world at large; and they showed strong reasons indeed for this conclusion at which they had arrived. In the first place, they said the English sovereign had never varied in value from the well known gold value of a pound sterling, by which most of the coin in the world had been regulated. The adoption of any other standard they considered would cause a great deal of inconvenience all the world over. Another reason for adopting the sovereign was, that if the twenty-five franc piece were adopted as the basis, France and the United States would have to call in all their silver coin in order to assimilate it to the gold standard. And these reasons were fortified by another consideration. The English Government had never charged seignorage for gold left at the Mint, but for so many ounces in gold returned, after so many days, their equivalent in coin; whereas Franee and the United States, and other countries, did charge seignorage for converting bar gold into current coin. The consequence would be that the many millions of gold now in circulation, which would require to be recoined, would be all brought to England for that purpose, as the coining would there be done for nothing. The commissioners also recommended that any change should be carried out by means of a convention or treaty, into which the various nations should enter, and suggested a number of matters, such as the remitting of coin which is lost by sweating or use, as to which there must be internal arrangements. He understood that it was now the impression, both in France and the United States, that the recommendation of the English Commissioners had much merit in them, though they should not wholly be accepted, and the English Sovereign adopted as the standard. This would cause very little inconvenience to these countries, for the pound sterling had been practically the standard throughout the world up to the time of the French Revolution, and in the United States during the suspension of specie payments, it was of little consequence what particular coin was taken as the standard, whereas the investigations of the Commissioners had shown that the world at large would be more inconvenienced by change from the English sovereign than the United States by a change from their five-dollar piece. France by assimilating her 25 franc piece to the sovereign. Under these circumstances he thought we should submit a little longer to the inconvenience arising from the difference of currency in these Provinces. He hoped we should soon see Newfoundland into the Confederation. Newfoundland also had a different standard of money, differing both from Nova Scotia and the rest of the Dominion. In Newfoundland, the sovereign, he believed, was worth $4.80, while in Nova Scotia it was worth $5, and here, $4.86⅔. The Hudson's Bay Territory, again, which we hope soon to incorporate into the Union, had still a fourth standard; and Prince Edward Island, which we hoped by and bye to bring into the Union, had another peculiar to itself. He observed from the report of the Commissioners that the Swedish Government, and he believed another nation which was mentioned in the Report, had adopted the same course as we had done, and passed a permissive Bill.

TORONTO STOCK MARKET.

(Reported by Pellatt & Osler, Brokers.)

Business continues still inactive in stocks and bonds; transactions that have taken place have been at high rates.

Bank Stock.—Sales of Montreal have taken place at 150 and 150½ ex-dividend; there are buyers at the former rate. Buyers offer 101 in British; none in market. Ontario is offered at 97½ ex-dividend, a small sale reported at 97. None in Toronto in market, enquired for at 118. There are buyers of Royal Canadian at 30, but no sellers. Commerce is firm and in demand at 103; no sellers under 104. Gore is offering freely at 100; buyers will not advance on 35. Small sales of Merchants' were made at 109 which rate is offered. Nothing doing in Quebec. There are buyers of Molson's at 108 and sellers at 108½. No sales in City. For Du Peuple 109 would be paid; none in market. There are buyers of Nationale at 70. Small sales of Mechanics' at 93½. Jacques Cartier nominal at 105 ex-dividend. Union has advanced to 107 and is in demand at that rate.

Debentures.—Sales of Dominion Stock are made at 108 and 108½, there are now buyers at 107¾; five and six per cents. are enquired for. Toronto are offering at rates to pay 7 per cent. interest. County are offering to pay 100 and are not in much demand.

Sundries.—City Gas was pressed for sale in the beginning of the week at 105, there are

buyers at that rate. No sellers of British America Assurance under 60 ; nothing doing. There were sales of Canada Permanent Building Society at 125½ and 126, still procurable at the latter rate. Western Canada Building Society sold at 120½ and 121 ; a small lot on market at latter rate. Freehold Building Society is in demand, sales have been made at 113 ex-dividend. There are buyers of Montreal Telegraph at 135 and sellers at 135½. Sales of Landed Credit were made at 78 and 79 ; there are buyers at 79½ and no sellers under 80. One or two large mortgages were offered at 8 per cent.; $1,000 and $2,000 mortgages are in demand. Money is in demand and on the street a large advance on bank rate is paid.

THE BANKING SCHEME—ACTION OF THE TORONTO BOARD OF TRADE.—A meeting of the Board was held on Monday, the 29th of May, Mr. James G. Worts in the chair ; there was a good attendance of members. A draft of a petition to Parliament was read by the Secretary, the substance of which is as follows :—That the petitioners, while admitting that some of the resolutions on banking and currency are worthy of adoption, in so far they tend to the promotion, of increased security in banking operations, are strongly of opinion that the change which would be produced in the Canadian Banking system, by the proposed abolition of the existing note circulation, and the substitution in its place of a circulation founded upon government debentures, would be seriously detrimental to the Province of Ontario, inasmuch as it would deprive the banks of that power of expansion which, exercised under proper conditions and limitations, is calculated so effectually to advance, and has hitherto advanced in no small measure the well-being and progress of the Province ; that the security of the note holder would be sufficiently gained by inserting provisions in bank charters, making the notes in all cases the first lien upon the assets, of a bank, placing the affairs of a suspended bank under the inspection of a public officer, with instructions to redeem the notes from the first available funds in hand, and enforcing the principle of double liability in respect of stockholders. That any further special protection of the note-holder would be superfluous ; that the principle of discriminating between different classes of depositors in the manner laid down in Resolution 10 is unsound, and would prove unjust and injurious in practice ; that the petitioners deem it highly impolitic, in the absence of any pecuniary pressure upon the Government, to place so large a portion of the capital of the country in the hands of any Administration ; that the petitioners highly approve of that portion of the proposed plan, which would effect the withdrawal of the Provincial notes from circulation, feeling assured that the issue of such notes is a step in the direction of an irredeemable currency, and places an undue advantage in the hands of the Government bank, for the time being, over other banking institutions—both which results are detrimental to the interests of the country.

STOCK SALE IN HALIFAX.—At the sale of stock at the Merchant's Exchange Reading Room by J. D. Nash, for W. M. Gray, the following were disposed of :—10 shares People's Bank at 127 25 : 40 do. at $27 ; 18 do. Union do. at $55 ; 20 do. Bank of Nova Scotia at £69 ; 4 do. Halifax Fire Insurance Company at £10 5s. ; 12 shares Halifax Fire Insurance Company at £10 3s 9d. ; 7 do. Union Insurance Company at £19 5s. ; several shares Acadia Fire Insurance Company at $51.

LIST OF NATIONAL BANKS WHICH HAVE RESIGNED THEIR PRIVILEGES.—The following is a list of the National Banks which have resigned their privileges as designated depositories since the 1st of April last, and have withdrawn their securities: New York County National Bank of New York; the Second, Third, Fifth, Tenth and National Park Banks of New York; the First of Buffalo, N.Y.; the Blackstone and Third National Bank of Boston; the First and Union National Banks of Chicago, Ill.; Ridgely National Bank of Springfield, Ill.; National Bank of Germantown and Philadelphia, National Bank of Philadelphia, and the First National Bank of Williamsport, Pa.

P. O. SAVINGS BANKS.—In answer to an inquiry on this subject in the Senate, Hon. Mr. Campbell replied :—"That already the Post Office Savings Banks have been extended to the Maritime Provinces. It was the wish of the Government to make these Savings Banks as general throughout the Dominion as possible. However, as the expense of management had already cost about two per cent., it was necessary to proceed with caution."

—The bills for increasing the capital stock of the Bank of Commerce, and of the Bank of New Brunswick have been passed by the House of Commons and also have received the second reading in the Senate.

Insurance.

FIRE RECORD.—Montreal, May 26.—A brick building on George street was set on fire; damage $300. Also the workshop of a shoemaker, corner Magill and Lemoine streets, damage slight.

Aylesford, N. B., May 14.—House of W. J. Kirkpatrick was totally destroyed; loss partly covered by insurance.

St. John, N. B., May.—An unfinished house was struck by lightning and damaged to the extent of $500.

Niagara Township, Ont., May 24.—House of Jos. Stevens was destroyed; the fire caught from the chimney; no insurance.

Plattsville, May 27.—Kerr, Brown & McKenzie's shingle factory was destroyed by fire. Loss stated at $1,500 ; partially insured.

RATES OF INSURANCE IN CHICAGO.—A Chicago paper says—The Board of Underwriters of this city have passed a resolution permitting all its members to fix their own rates of premiums to be charged, without reference to the uniform rates which they had heretofore endeavored to sustain in their board organization. As the leading idea in the formation of a board of Underwriters was to secure uniform and also higher rates than they could while competing with each other by cutting down rates, the adoption of this resolution was equivalent to a dissolution of the Board. The result has been that, during the last week, rates of insurance on buildings and their contents, in the business part of the city, have fallen nearly fifty per cent in many cases, and in some cases even more. This, however, only applies to buildings in the business parts of the city, as these were the only risks on which the Board of Underwriters attempted to establish uniform rates for all the companies. Rates for insurance on dwellings in all parts of the city have always been open to competition, and therefore remain unaffected by the action of the Board.

FOREIGN LIVES.—The following is an extract from a circular issued by a prominent American Company to its agents and solicitors:—"Our experience has demonstrated that residents in this country of foreign birth, and especially those emigrating in middle life, are not equally good risks as native-born citizens; and that, of those, the Irish are decidedly the poorest, and the Germans the next. It is believed that of the above two classes who now embrace life insurance, the number is so large as to materially disturb the average rate of mortality expected from selected lives, and to materially increase the cost of insurance. We therefore request that agents will not make any special efforts to solicit applications from among those classes, and that they will use discretion and care in selecting cases from those classes to be sent to this office."

ENDOWMENT POLICY.—This form of policy embraces the principles of both Life Insurance and the Savings' Bank. By it a party protects his family or others whom he wished to benefit ; and upon attaing a specific age, reaps for his own use the advantage of the savings he had made in earlier years, thus, in addition to providing for contingencies on the pathway of life, returning him the principal and a fair interest on the investment. The payments upon these policies may be made to cease in ten years, or to continue during the term of the policy. Endowment policies, after the payment of two entire years' premiums, are non-forfeitable in most of the companies, for such a proportion of the original sum as the number of annual premiums paid bears to the total number required by the Policy.—*Monitor.*

A NEW TABLE OF MORTALITY.

The Institute of Actuaries, of England, have been engaged for three or four years past in collecting and tabulating the mortality experience of some twenty English and Scotch Life Insurance Companies, part of which experience extends over nearly a quarter of a century. Great care was taken in the elimination of duplicate policies on the same life, and the large number of entrants and the great length of time, forming the basis of these calculations, gives extraordinary value and authority to the result.

The following table, from the London *Insurance Gazette*, exhibits that result :

	Entered.	Years of life exposed.	Died.	Discontinued.	Exist'g end of 1863.
Healthy lives, male	130,243	1,283,034	20,521	25,024	74,698
Do. female	16,604	161,417	3,332	5,507	7,762
Both	146,847	1,444,451	23,856	40,531	82,460
Diseased lives, male & female.	11,146	101,695	2,456	3,365	5,325
Lives exposed to extra risk from climate or occupation, male and female	2,433	16,503	409	1,480	544
Total	160,426	1,562,649	26,721	45,376	88,329

The Institute have further pursued their investigations with a view of determining, so far as possible, the value of medical selection. This may be traced in varying measures according to the age at entry, appearing to continue longest in the middle periods of life ; but for all practical purposes, seems to cease entirely after five years. The first year of insurance shows a remarkably low rate of mortality, averaging at all the ages only 46 deaths among 10,000 entrants.

The comparative rate of mortality among female lives shows an excess at all ages below 45, beginning at the age of twenty, with an excess of nearly 70 per cent., and descending gradually until the age of 45 is reached, when it is nearly equal. From that time onward it improves to the end of the table, being at the close some twenty per cent. better than the mortality among male lives. The average excess of mortality among females is about 20 per cent.

The mean duration of insurance, including those living, December 31, 1863, was 9.12 years. Out of the entrants, the proportion who died had been 16.2 per cent., discontinued, 27.6 per cent., living and keeping up their policies, December 31, 1863, 56.2 per cent. The result of these elaborate researches into the experience of Life Insurance Companies, is to give us a new table of mortality, more accurative and authoritive than any we have ever had. Under the age of fifty-five, this table differs very little from that in most general use in this country, and is considerably below the Carlisle. It exhibits a more perfectly graduated scale of mortality than any table extant, and until the experience of our American Companies shall have been extended over a sufficient length of time, and been recorded and tabulated with sufficient care to rival this work, our

own Actuaries will continue to be indebted to the Institute for the most valuable data accessible for the purposes of their calculations.—*The Chronicle.*

THURSDAY, JUNE 3, 1869.

THE CANADIAN CANALS.

NO. III.

The arrival at Montreal of the splendid propeller, "Her Majesty," from Toronto, with a cargo equal to 4,000 barrels of flour, and its increase there to 6,300 barrels, is a very suggestive fact. Her destination was Halifax, but the necessity of floating through the present canal navigation of the St. Lawrence, had imposed a limit on the cargo with which she started on her trip. Ten barrels of flour are held to be a ton of freight; therefore if the canals permitted such a vessel to load to her full capacity, one third more freight would be carried at the same cost of carrying it, and, accordingly, the normal rate of freight would be one third cheaper, even with such a vessel as "Her Majesty." Starting easterly from Toronto, to proceed to the salt water, there are two systems of navigation, the St. Lawrence Canals and the river below Montreal. As the Allan steamers now lie at the Montreal wharves, it needs but mention of the fact to establish the extent of the latter. To be precise, however, it may be described as a 20 feet navigation. There has been some unpleasant correspondence on this subject, and doubt has been thrown upon the fact. But after examination of the charts, and what has been advanced on both sides, we deliberately say that there is a 20 foot channel east of Montreal, although it may not be sufficiently marked off by beacons and lighthouses. West of Montreal the limit is established by the canals, viz., the lock of 45 feet wide, with a depth of 9 feet, and a length of 200 feet. Such is the condition between Montreal and Lake Ontario, extending up to St. Catharines, on the Welland Canal. Here the navigation is again changed, to be governed by the Welland Canal, where the lock is 150 ft. by 26 ft. 6 in., but with 10 ft. water on the sills, until Lake Erie is reached. Therefore the navigation of the St. Lawrence is composed of four systems.

1. From the ocean passing Quebec to Montreal: a 20-foot navigation admitting the noble Allan boats of 3,000 tons.

2. The St. Lawrence Canals extending through Lake Ontario to St. Catherines, admitting such vessels as the propeller "Her Majesty." She is 180 long and has 30 feet breadth of beam. In the St. Lawrence Canals she can carry 4,400 barrels of flour only; as has been shown when freed from these restrictions, she increased her cargo one-third.

3. The Welland Canal propeller is a type of this class. She is principally engaged in the Oswego trade, that is, passing from Chicago to Oswego, discharging at the foot of the Oswego Canal into barges, which ascend to Syracuse to take the Erie Canal. There is also a class of vessels which descend the St. Lawrence, but as the depth of the Welland is 10 feet and the St. Lawrence but 9, this class of vessel carries 1,100 barrels of flour, less than she could otherwise do, and from want of draft and general build, such vessels are not fitted for the salt water.

4. The Lake Erie steamers are representative boats of the fourth class. Affected only by the depth of the St. Clair flats, they are magnificent steamships travelling between Buffalo and Chicago, regardless of the storms which sweep these waters.

With a little effort it ought not to be difficult to understand the imperfection of the St. Lawrence navigation, while at the same time, any one who opens the map must see that it is the river which should be the channel of communication for the great west to the ocean. Further, it must be plain to every one, that the whole system is unde the control of Canada, and without effort o the part of the Dominion, the navigation wi continue to be, as it is to-day, ineffective an incomplete. It has been said that powerf influences prevail in Montreal against ar extension or amendment of the route as policy hurtful to that City, and it is in th City that opposition would be looked f when the improvement is claimed. We sha not stop to consider if the accusation be tru or if true, that results unfavorable to Montre will accrue. The latter, possibly, will be co sidered in its place Suppose, for our purpo to say now, that we consider that the bene to Montreal would be incalculable, for t geographical position of that City is, of cours greatly in its favor. But as such opinio are supposed to prevail, we are not surpris to read in the Montreal journals that "H Majesty" has little business west of th City. The *Montreal Herald*, which is ge erally written in a fair and thoughtful spir and nevertheless the very blue-blood of co mercial orthodoxy for Montreal, thus allud to the departure of this propeller: "Fr "what we know of canal navigation, we ha "no doubt after the first trip, her owner w "find it greatly to his advantage to run t "steamer from *here* instead of Toronto, a "have no doubt she would be crowded wi "both freight and passengers every trip

The italics are not ours. If we venture paraphrase this very suggestive sentence, may read thus, "What is the use of going "Toronto? You only lose time useless "Whatever you carry, 'canal navigation' w "allow you but two-thirds of your car "You must take your remaining third he "And, accordingly, it is better, not "make two bites of a cherry. Receive yo "three-thirds here—your whole here; Mo "treal is the natural harbor of ocean-goi "vessels. It is *here*—we will follow the e "phasis of our extract—it is *here* that tra "shipment has been made and must "made."

These facts enable us to establish a ba on which the Canal question really can argued. Even so far as Canada is concern without any reference to the great States the American Union bordering on the lak it may take a short time or it may take long time to educate public opinion on t subject. But one day that public opini will be formed, to be uttered in every cou west of the Province line, and to be a p of the political faith of every public man Ontario, that the Canal question must rece its solution. It is the fashion, still in ma quarters, to treat any comment on the s ject as visionary, as mere Utopean ide which "practical" men cannot entertain.

will be one of the duties of this periodical, unswervingly to keep the subject before the public eye. We belive, possibly, the wish is father to the thought, that the hour is not distant when the demand of Western Canada to possess a sufficient outlet to the ocean, will no longer be met by jaunty jokes, and when ministers of finance will cease indefinitely to postpone it by threats of financial crisis and protestations of national poverty. For, so far as Canada is concerned, the subject is capable of fair and just consideration; but what can be said when it is urged that the whole immense district of territory which clusters round the lakes is affected by it! The Erie Canal is now the channel taken by the produce of the West. It is notoriously insufficient. On the other hand, we have "Her Majesty" going to Halifax. Surely if a vessel can go to Halifax from Montreal, she can go to Boston and to New York. From Montreal to Halifax the distance is something short of 1,200 miles, but the voyage is shortened by taking the Gut of Canso. From Halifax to Boston the distance is only 450 miles, and from Boston to New York, the trip is made in a few hours. Indeed the propeller could steer direct from Cape Sable to Nantucket, and there is but a moderate difference of time between the two sea-board cities. There is nothing visionary in this, nothing fanciful. For "Her Majesty" drawing 10 feet 6 inches now virtually makes the trip. How much better could it be effected with vessels drawing a greater depth and built specially for the trade?

This view of the case appears to us to meet the argument of the necessity of the Caughnawaga Canal, a water communication proposed to be effected between the waters of the St. Lawrence and Lake Champlain. We do not class this work with such useless, we will add, and in no offensive spirit, such preposterous schemes as the two projects of the Ottawa Canal navigation, and the Toronto and Georgian Bay Canal. As we have advanced, and we venture to think we have established, both are merely parallel lines to existing routes, and their construction would achieve nothing. If completed and in operation, the only result would be that vessels would by a different route come to the same point which they can now reach, the advocates of the schemes say, in less time. Experienced inland mariners, and men who all their lives have been engaged in the business think otherwise. Our own opinion we unhesitatingly pronounce, that no time would be gained. We look upon the schemes as ill considered, and placing our confidence in the good sense of the community, we are certain of their ultimate rejection. We, however, desire to see the question, without delay, brought forward and argued and supported with vigor, so that it may be settled; for the public attention is dissipated by contradictory projects to utter bewilderment. Therefore we hope to see that zeal which is idly and to ill purpose employed, ultimately turned on more healthy projects. We look forward to the date of the improvement of the St. Lawrence, the one great saving policy of Canada. The Caughnawaga Canal is no visionary scheme. Indeed it has much to be commended, and it cannot be summarily dismissed. Our argument, however, for the moment, with regard to it is that the time has not come for its construction. Possibly it is only a work of time. But we counsel those who advocate it to join in the effort of first completing the St. Lawrence navigation. Let this improvement take precedence of all others. Let it remain without complication and without the trammel of any inter-dependent project. We have shown that from Quebec to Chicago, there are four distinct classes of navigable waters, that is to say, reaches of navigation controlled by distinct circumstances, so that a representative vessel is peculiar to each as a type of maximum tonnage passing on its waters. As it is extravagance to consider that we can ever attain the 20 feet of navigation from Montreal to Quebec, we may at once cease to discuss it. We have, therefore, in the distance between Chicago and Montreal harbor, three distinct navigations. What is required is to bring these three varied systems into one system. This is the first point to be gained. We need a unity of navigation for the St. Lawrence. It is on this proposition—a proposition which when understood, will be acknowledged to be plain and simple, it is on this policy we wish to rally support, and we trace more than one reason in the necessity of laying down this principle. In the first place it is the key note, the very centre stone of our argument for an improved navigation. It will show not only what is needed, but what is not needed; it will establish the true policy of the country and point where we may look for its real resources. It will suggest fields of industry and the wise employment of capital. These are not exaggerations. The advocates of the policy indicated are content, however, for a time to incur the ridicule of the jaunty politician, who finds in the theme many a subject of vapid joke, and on the other hand, to bear unmoved, the sneers of those respectable imbecilities who affect to frown down a new project as simply an impracticable theory. We are all sustained by the hope that the time will come when the complete development of the St. Lawrence navigation will be a political dogma; when the struggle at the hustings will be, who shall the loudest profess it. It is this thought which leads us to persevere, for we are on the side of common sense and ought to work out an enlarged, wise, national policy—not of littleness, bickering and one-sidedness—but one raising our own land to wealth and prosperity, and extending to our neighbors the like advantages; a policy cheering and benefitting them, which likewise will enrich ourselves.

INSOLVENCY.

As the principle of a law for the relie of insolvents has been sustained in the House of Commons, and as the measure now before that body amends in many particulars the law that heretofore prevailed respecting insolvency, it is manifestly advisable to make it as perfect as possible. In many respects the old law has been found defective, and in some of its features the proposed act is objectionable. The liberty to make voluntary assignments has undoubtedly been abused. It is proposed to make the first step in insolvency, an assignment to an Interim assignee, who shall prepare a statement of affairs for the creditors, at a meeting to be held not less than three weeks from the date of the assignment. At the meeting the creditors may appoint another assignee, who shall supersede the Interim assignee. The power of the Interim assignee is very limited, while his duties cover the most laborious part of the work. If the stock assigned to him is perishable, it must lie there until he has completed his examination of the insolvent's affairs, and procured a meeting of creditors. Though promptness in extinguishing rent or saving bailiff's fees, be of the utmost importance to the creditors, nothing can be done. Cases have occurred in which, the only hope of creditors receiving anything lay in an immediate sale. If it is possible to avoid this deadlock, and attain the same object to be gained by the immediate appointment of a custodian satisfactory to creditors, it is well to search out a method. An assignee, satisfactory to one or more of the principal unsecured creditors, would in almost every case prove acceptable to the other creditors; admitting this, we naturally conclude that a voluntary assignment should be made at the outset to one named or approved of by such principal unsecured creditor or creditors, giving him the same powers as are possessed by a permanent assignee. Delay, expense, and loss might thereby be saved, and increased facilities would be afforded for bringing the estate into liquidation. If the Interim assignee is to be retained, he certainly should not be required to do work which the assignee when appointed will be required to do over again. In winding up small estates, this duplication of work would be a serious matter. Clearly the duty of the Interim assignee should be limited to

taking charge of the estate, calling a meeting of creditors, and selling perishable goods.

Where notice of contestation is given, the creditor should not be at liberty to withdraw except on cause shewn; for it has occasionally happened, that compromises are made which are very suspicious. In the absence of a contestant, as where his debt is garnished, his objection should nevertheless be inquired into and decided upon. In the case of secured claims, it should be imperative on the creditors relying on such to furnish the assignee with full particulars of his securities. As it is now, he merely ignores the proceedings, resting content with the weapon he holds.

Privileged and secured creditors should be disqualified from voting, as it is manifestly unjust that they should have equal rights with those who are interested in doing the best for all concerned. A creditor who tenders for purchase of the insolvent's estate, or part of it, should not be allowed to decide upon the acceptance or rejection of his offer.

It is sometimes found that agreements exist between the insolvent and debtors to take out indebtedness in trade. If it is just to landlords to interfere with their rights, under leases, it is certainly no less just and proper that such agreements as these indicated should be voided, so far as receiving payment in trade is concerned.

The power of the assignee is too limited. It might be extended, so as to give additional powers to seize property, after the manner of sheriffs, and in such case, the provisions of the Interpleader Act might be made to apply. It would be well, also, to reduce the number of official assignees in each county. A reduction in number would give each one such employment as would enable him to employ a staff such as justice to the business demands.

The assignee should be empowered to compound for debts due to, and to sign composition deeds on behalf of the insolvent, and when authorized, by power of attorney, to execute the insolvent's composition deed on behalf of such creditors as wish it. There is no provision for the absence of the assignee. The delay necessitated by his absence might be avoided if there were a power of appointing a deputy. In the event of a dividend being declared on claims based on promissory notes, where the insolvent is indirectly liable, there is no power in the assignee to sue the parties directly liable. There is no provision for commuting dower in the case of a sale of land. Were such commutation to be made, upon the basis of the amount realized by the sale of the property subject to dower, it would be a reasonable way of selling to the best advantage, without injustice to anybody. Assignees are required to keep duplicates of and file every original document. This is of no practical value, and only adds to the expense. There is no provision for the assignee's right of appeal when he is dissatisfied with his allowance. One creditor, by buying up claims, may hold the assignee at his mercy. It has been held that an assignee cannot obtain a discharge if no dividend has been paid. This is certainly unreasonable, and should be provided for. There is difference in the power over the sale of leases and that of stock. Now many a time a stock can be sold for the sake of the lease, and if the assignee could sell the one on the same terms as the other, and at the same time, the insolvent's estate would undoubtedly be the gainer.

There is also a difficulty where one partner absconds and the other wishes to make voluntary assignment. In the case of concealment or absconding there is great delay. The method of bringing the estate into liquidation is not expeditious. Perhaps it would, in such case, be better for the judge to call a meeting of creditors at once.

In all the particulars mentioned, there is such apparent reason for amendment in the law that we do not think it necessary to do more than summarize. As the Insolvent Act is being amended, it only requires a little trouble to obviate the necessity for future tinkering.

EXPORTATION OF AMERICAN SILVER.

The public were made aware, a few days ago, by a return laid before Parliament, that the Government, through the Bank of Montreal, had exported about one million dollars of American silver coin in February and March last. The history of the operation—very properly kept quiet till completed—throws light upon this question, which, if simple in theory, is beset with many difficulties in practice. In consequence, no doubt, of the state of the market, the sale of bonds to the full amount of the silver purchased was not completed; but we have the opinion of Mr. Angus that the entire operation would have resulted in giving the Government the loan—for such it really was—at a rate not to exceed 6½ per cent. About two-thirds of the silver was exported to Liverpool and London, and the balance to New York; several lots were disposed of in the latter city at from 4¾ to 5 per cent. The transaction seems to have been well managed throughout.

Although a million dollars were exported in this way, and a large quantity also under the exploded Weir scheme, the effect on the market was comparatively slight. This proves either that there is a much larger quantity of American (and British) silver in the market than was supposed, or that the existing duty, and the machinery for the collection of the revenue, are valueless for the purpose of preventing its importation. We believe the quantity in circulation has been very generally under-estimated. These coins are to be found in the remotest districts of the country; they are distributed through all the ramifications of capital and industry, and as there is no central point to which they can be returned for conversion at par as a bank note, or used in payment of indebtedness, current funds are so used, and these coins are retained outside in circulation. Hence the attempt to export the surplus silver of the Dominion is a Herculean task, and cannot be made successful by any fitful attempts, to say the least. Whether it can be accomplished at all by the use of reasonable measures, so long as monetary affairs in the States remain as at present, is yet to be proven; for ourselves, we are decidedly skeptical on the point. To get it out is one thing, but to keep it out is quite another affair. An export movement is directly calculated to defeat itself, and the nearer apparent success is reached, the more difficult the task becomes. So soon as enough is exported to appreciate the coins to par the inducement to bring them in becomes too powerful to be successfully resisted. The strictest surveillance on the part of custom officials could not prevent a stream of illicit importation large enough to nullify any export scheme.

It is pretty well understood that the flood of American silver in Canada is directly traceable to the system of irredeemable paper currency in vogue in the United States. Silver coins having disappeared from the channels of circulation, have become useful only for shipment abroad, and for the few other purposes to which specie is now applied. But for all these purposes gold is a better medium, and hence silver is at a discount, as compared with gold, ranging from four to six or seven per cent., according to circumstances. To buy it at this discount and pay it out in Canada at par, affords a clear percentage of profit as large as the discount itself, less expenses. The discount here now rules much the same as in New York, and is to a great extent governed by the rate in that city. There is, therefore, no special inducement to ship either way at present.

While the obstacles to immediate relief, by means of exportation, seem insuperable, there is no reason why the Government should not avail itself of the opportunity to exchange bonds for this specie on favorable terms. If profitable export operations may be carried on for the account of the Government, the people will have no reason to complain: rather the contrary. But to attempt the riddance of the country of this silver, at an expense to the country, is clearly unwise.

could not be entirely successful, and while resulted in a loss to the whole people, uld greatly benefit a few speculators. Whether there are not other means of relief thin the scope of legislation that might be ccessfully adopted, is worthy of diligent quiry.

MUTUAL FIRE INSURANCE COMPANIES.

Under the Act respecting these companies on. Stat. U.C., cap. 52), when forty or more rsons, duly qualified, have bound themves to effect insurance amounting together forty thousand dollars, they may become ody corporate. Each member before he eives his policy, deposits a promissory note, yable to the Company or its proper officer, the premium, and pays a certain part of n cash towards working expenses. At the iration of the term of insurance, the note, er deducting all losses and expenses, ocring during the term, is given up, as h member is bound to pay his proportion ll losses and expenses accruing during the tinuance of his policy. The company may lect premiums in cash for insurance for ms not longer than one year. The cash mium paid at the time of insurance is not t of the annual assessment (31 Vic., c. 32). en policies are issued and premiums in cash lected, for periods of one year, the persons paying are not liable to further charge or essment. In case payment or note given cash premiums or assessments upon a mium or deposit note be not made within ty days after it is due, the policy beies void, but the company may waive the feiture, and even though no waiver took ce, the party in default still remains liable the amount in arrear (29 Vic., c. 37).

n case of loss, the Directors fix the protion to be paid by each member on the ginal amount of his deposit note. When whole of the deposit notes are insufficient pay the loss, the sufferer receives not only roportionate dividend on the amount of es, but also a sum to be raised by an assessnt of members, not exceeding one per cent. the amount each has insured.

company may, for the speedy and cer payment of losses, raise a guarantee ital not to exceed $500,000, which shall liable for all losses, debts and expenses; as much as two-thirds of the premium es belonging to the company may be lged as a security to the subscribers of guarantee capital (27, 28 Vic., cap. 38). eserve fund may be formed of all moneys and at the end of each year after payt of ordinary expenses and losses, such rve to be applied to pay off the guarantee k, or such liabilities as cannot be provided for out of the ordinary receipts (31 Vic., c. 32, sec. 6). Debentures, promissory notes, bills or drafts may be issued for losses, so long as the amount outstanding does not exceed one-fourth part of the amount then unpaid on the deposit or premium notes held; and the members may be assessed for such sums as may be necessary to meet them. Any member, upon payment of the whole of his deposit note and surrendering his policy before any subsequent loss or expense occurs, is discharged from the company.

Various special acts have been passed by the Legislature, giving to particular companies powers beyond those conferred by the general Act, and modifying its general clauses. For instance, the Toronto Mutual, by 31 Vic., cap. 52, is empowered to issue policies and collect premiums in cash for a term of one year, on which the insured are not liable for any further charge or assessment, and are not held as members of the company in any respect. The Oxford Farmers' may (31 Vic., c. 54) issue cash policies for insurance for terms of one or more years, not exceeding five, with the like exemption from liability. The Waterloo Mutual (31 Vic., c. 55) issue cash policies for terms of two or more years, with like exemption. The Gore District may issue cash policies for one year, in the same manner.

The Canada Farmers' Mutual have abolished the premium note system and the members have no security other than is afforded by the rates imposed. The last report of the Agricultural Mutual speaks of the preference shown for the cash system.

It appears, therefore, that the various mutual companies have been gradually leaving the premium note system. There is no doubt that there is on the part of the insured a preference for the cash system and its exemption from liability and in order to compete successfully for business, the Mutuals have been compelled to depart from the true mutual principle. But this breaking loose from premium notes deprives the insured of that security for payment which he naturally looks for. In the absence of a guarantee capital, there is no security at all but the honesty and good management of the Directors. It may be said that they confine their business to narrow circles, but the contrary is becoming the case, and we find Mutuals branching out in all directions and competing successfully with Stock companies. We know the note system may have abuses attached to it, such as in one case we have heard of, where the agent taking risks gets $2 a policy and the company gets nothing until an assessment is made. But that is no sufficient answer. Where the note system prevails there is a show of security, at the least, but in the cash system there may be neither shadow nor substance. Under such circumstances, we conclude that some remedy should be applied to a state of affairs manifestly wrong. It is questionable what steps should be taken to bring about a proper settlement of the matter, but it is not impossible that any move would be in the direction of a deposit, with Government, of a portion of the cash premiums until a certain amount is reached. However the subject is open for discussion and we shall be glad to give publicity to the views of those who are disposed to make suggestions.

THE ASSESSMENT ACT.

The Assessment Act of 1869 has given rise to more indignation, has caused more trouble, and has proved itself more unjust than any act ever passed having the same object. The exemptions are, property belonging to the Crown, places of worship, public educational institutions, public roads, municipal property, poor houses, hospitals, mechanics' institutes, etc., personal property of governors, imperial military or naval pay, salaries, pensions, etc., income of a farmer derived from his farm, personal property secured by mortgage or provincial or municipal debentures, bank stock, railroad stock, property owned out of the Province, personal property equal to debts owed on account of such property except debts secured by mortgage upon real estate, or unpaid on account of purchase money, personalty under $100, income under $400, ministers salaries, rental of real estate, household effects and salaries of officials of government departments. The real and personal property are required to be estimated at their actual cash value as they would be appraised in payment of a just debt from a solvent debtor. As regards the assessment of personalty, the act reads as follows:

"No person deriving an income exceeding $400 per annum from any trade, calling, office, profession, or other source whatsoever, not declared exempt by this act, shall be assessed for a less sum, as the amount of his net personal property, than the amount of such income during the year then last past, in excess of the said sum of $400, but no deduction shall be made from the gross amount of such income by reason of any indebtedness, save such as shall equal the annual interest thereof; and such last year's income, in excess of the said sum of $400, shall be held to be his net personal property, unless he has other personal property liable to assessment, in which case such excess and other personal property shall be added together and constitute his personal property liable to assessment."

Clause 36 applies to companies:

"The personal property of an incorporated company shall not be assessed against the corporation, but each shareholder shall be assessed for the value of the stock or shares held by him as part of his personal property, unless such stock is exempted by this act;

provided always, that in companies investing their means in gas-works, water-works, plank and gravel roads, manufactories, hotels, railway and tram roads, harbours, or other works requiring the investment of the whole or principal part of the stock in real estate already assessed, for the purpose of carrying on such business, the shareholders shall only be assessed on the income derived from such investment."

According to an estimate made in the city clerk's office, the total exemptions in Toronto amount to about six millions of dollars. While the land owner is exempt from taxation on the income he derives from rental, the merchant is taxed first on his stock or capital and then on the supposed income he derives from selling it. The holder of say, building society stock, purchased to yield eight per cent. is forced to pay one and a half per cent tax. The holder of stock, such as that of the Provincial Insurance is assessed not on the dividend it yields but on the amount of the shares held, so that one may be compelled to pay taxes on what is not only absolutely worthless, but which would be got rid of if any one would accept it as a gift. The uneveness of assessment is also apparent, as the dishonest can easily "declare" themselves through all the provisions, while the honest are unable to move. The fact is, the whole system, at least in cities, needs revision, and if anything like justice is to be done, we must have commissioners appointed so that something like uniformity shall be brought about. For the present we confine ourselves to a notice of the evils so generally complained of.

Scottish Provincial Assurance Company.—The annual report of this Company shows that 988 policies were issued during the past year, assuring the sum of $1,800,000, on which the new annual premiums were about fifty-five thousand dollars. The death claims, including bonuses, were £54,774. The Company's business shows a steady and safe increase, derived solely through the exertions of the agents, and without those wholesale purchases of other offices, which often sow the seeds of ruin in otherwise sound Companies. Its affairs are conducted in a prudent, non-speculative way, resulting in that stability and ultimate success which Scottish Assurance Companies may fairly lay claim to. We are glad to be able to add, with all confidence, that the affairs of the Canadian Branch are in excellent hands.

Provincial Insurance Company.—We understand that the Manager of this Company will shortly leave for Halifax to try and arrange matters with the Company's Agent there, who declines to pay over any of the premium notes in his hands until the Company is off the risks he has secured for them. The different agents throughout the country who are in arrears have been notified to pay up or prepare for legal proceedings. It is said that a fresh call will be made on the stock at the next annual meeting.

NOVA SCOTIA GOLD FIELDS.

(Advance Reports to the N. S. Mining Gazette.)

Halifax, N. S., May 11, 1869.

Montague.—A bar of 24 oz. received to-day from the mine of Messrs. Leckie & Gay, of which property the manager reports favorably.

Uniacke.—The crushings from the two newly discovered lodes on the Montreal Co.'s property resulted as follows: 120 tons from the fourteen feet lode, gave an average of 4 dwts.; the 10 inch lode, 10 dwts. The Uniacke Co., are still working with a fair profit. The Central Company sent no quarts to the mill last week. The Queen Company are working in a small way. The Union Company and the Toronto Company have each let one shaft on contract; the former on a two feet lode, the latter on two lodes of an aggregate of 10 inches, opened by Mr. Burkner.

Musquodoboit.—The Hyde property is still employing about fifty men. The Burkner property forty. Results from both continue good; the lodes still showing gold in horizontal as well as vertical extent. Mr. Burkner has discovered a new five feet lode as rich as the one before struck. He has thus ten feet of good ore; one hundred tons of which are now ready for the mill.

Indian Path.—A telegram from Mr. Waddelow reports the discovery of a rich vein on the Waddelow & McDonald claims and has created some stir in Lunenberg and vicinity.

Gold River.—The foreman and two miners in the employ of the Gold River Exploration Co., directed by Mr. A. Michel, were to have left on Monday, but have been detained by a heavy storm. Mr. Samuel Kelly has been deputed by the Government to re-survey the district, and he will leave on Thursday.

Ecum Secum.—Discoveries have been reported on the claims of the Atlantic Co., but failed to cause any excitement.

Before the Legislative Assembly Charters of Incorporation have been applied for by the following Gold Mining Companies:—

Name.	Where Operating.	Where Owned.
Cobourg.	Sherbrooke.	Cobourg, Ont.
Cochran's Hill.	Melrose, N.S.	Sherbrooke, N.S.
Toronto & Uniacke.	Uniacke.	Toronto, Ont.

Halifax, May 21, 1869.

The following crushings have been reported to the *Mining Gazette* Office for the month of April. Renfrew and Uniacke districts having yet to be added:

Mine.	District.	Qrtz. Crushed. tons.	cwt.	Gold Yield. ozs.	dwt.	grs.
Sundry	Oldham	98	10	32	2	6

Bendigo	do.	40	0	2	3	12
Burkner	Musq'doboit.	100	0	48	0	0

Sherbrooke.—The Wellington Company paid a dividend of $10,000 on the 1st May, and expect to be in a position to pay $15,000 more on the 1st August, if present yield is maintained. The Caledonia, Woodbine, and Crescent mines are temporarily idle. A new manager, Mr. Corson, has assumed charge of the Wentworth, and Mr. Twist, of the Chicago.

Waverley.—An attempt was made to break into Mr. Burkner's mill last week, but fortunately the lessee had cleaned up the night before, so that the would-be thieves got nothing for their pains. Mr. Burkner obtained an average of 16 dwts. from his last crushing.

Wine Harbor.—The Eureka mill started and gives satisfaction. Improvement reported from the Provincial, and steady progress on the Na[illegible] works.

Musquodoboit.—Here, too, Mr. Burkner is [illegible] luck, two lodes having run together, and now g[illegible] him eighteen feet of quartz, which at last t[illegible] yielded an average of 7 dwts. per ton, or nea[illegible] fifty per cent. above cost.

Ecum Secum.—Activity reported by the Atl[illegible] tic Company, but no results. The managem[illegible] of this Company's Works now devolves upon [illegible] Edward Capel.

Gold River.—Mr. Samuel Kelly has been [illegible] puted to make an official survey of this field. T[illegible] foreman of the Gold River Exploration Compa[illegible] with a couple of men commenced operations [illegible] week.

Reports from other district not to hand [illegible] week.

Railway News.

Great Western Railway.—Traffic for w[illegible] ending May 14, 1869.

Passengers	$29,291 23
Freight.....	40,594 64

Coresponding week, 1868...	70,151 72
Increase	$2,736 61

Northern Railway.—Traffic receipts for w[illegible] ending May 22nd, 1869.

Passengers...	$2,940 78
Freight and live stock.....	12,220 35
Mails and sundries.....	286 28
	$15,447 41
Corresponding Week of '68.	14,823 31
Increase	$624 10

—The township of Weedon, eastern townsh[illegible] says the Sherbrooke *Gazette*, has taken $25,[illegible] stock of the Sherbrooke and Kennebec (wood[illegible] Railway company.

Commercial.

An Order in Council has been issued exempt[illegible] coal from the payment of canal tolls upw[illegible] through the canals. This is a concession to [illegible] Nova Scotia coal interest, which is but just [illegible] right under the circumstances. This import[illegible] industry is in a languishing state, owing chi[illegible] to the prohibitory duty imposed on import[illegible] the United States. We hope, therefore, to [illegible] Nova Scotia coal generally used throughout [illegible] Province. The quality is about as good as t[illegible] of Cumberland coals, so that if a trade were fa[illegible] opened up there is every reason to believe it wo[illegible] be successful. We happen to know that the [illegible] cession now made is due to the exertions of [illegible] R. G. Haliburton, of Halifax, who has persiste[illegible] urged upon the Government the wisdom of [illegible] ecurse now adopted.

The bills of the Royal Canadian Bank are [illegible] selling at 95 to 96, being slightly lower.

A meeting of the London Board of Trade [illegible] held on the 31st May, when strong resoluti[illegible] were passed in opposition to the proposed bank[illegible] scheme, and recommending the postponemen[illegible] action on the subject till next session.

We learn that Mr. Thos. Haworth, of the [illegible] firm of Haworth & Co., hardware merchants, [illegible] received his discharge from the Judge of the [illegible] solvent Court and has resumed business on Yo[illegible] Street, in this City, as a general commission m[illegible] chant for the sale of hardware and general go[illegible] Mr. Haworth is well known to the trade, hav[illegible] done business for many years in Toronto. Th[illegible] is no doubt but orders entrusted to him will[illegible] executed with care and dispatch.

The Lybster cotton mills, the property of Messrs. Gordon & McKay, of this City, and situated on the Welland Canal at Thorold, have been as good as stopped on account, it is said, of the dullness of the dry goods trade. Only a few hands will be employed till trade revives.

Toronto Market.

There is a rather better feeling in trade this week, but the amount of business doing is small. The general policy is to open no new accounts and to sell only to first class men.

PRODUCE.—The market is rather better and considerable sales were made. *Wheat*—Receipts 13,320 bushels, and 1,080 bush. in the same week of last year. Stock in store on the 31st ult. 64,800 bush. against 133,000 bush. on the 3rd May. Sales of spring 4,000 bush. at 95½c. f.o.b. and other lots amounting to 10,000 bush. at 95 to 96. About 14,000 bush. fall sold at $1 and 4,000 bush. midge proof at 96 f.o.b. There were free shipments of wheat and other grain during the week. *Oats*—No receipts—Stock in store on the 31st 10,600 bush. against 14,500 bush. on the 3rd May. The market is steady at 52c. to 54c. in car loads. *Peas*—No receipts—Stock in store on the 31st 12,500 and 24,200 bush. on the 3rd May. Some sales at 73 to 73½. *Barley.*—No receipts—Stock 800 bush. and 4,200 bush. on the 3rd May. There were some sales of cars in the neighborhood of 80c., the market closing firm at that figure. *Corn* is held at 60c. in car loads.

FLOUR.—Receipts 1,510 brls. against 630 brls. last week. Stock in store on the 31st 12,912 brls. and 22.900 brls. on the 3rd May. The market has ruled firmer and more active and is from 5c. to 10c. higher on the week. Sales of several thousand barrels in all were made at $3.90 to $3.95 early in the week and latterly at $4 to $4.05, the market closing steady at the latter quotations. Fancy is also firmer and has recovered to $4.20 and $4 25, a lot of 1,000 brls. of a choice brand sold at the latter price. Extra is worth about $4.40 with little doing. Superior, none. *Oatmeal*—A lot of 100 brls. sold at $5.50 on track; small lots of choice for retail sell at $5.75 to $6. *Cornmeal*—Unchanged at $3.75 to $4.

PROVISIONS.—*Butter*—There is no demand and nothing doing in a wholesale way. The season is so favorable that a large crop is expected and dealers are therefore holding off in expectation of buying at low prices. *Pork.*—Nominal as quoted. *Bacon.*—A lot of 2,000 lbs. sugar cured sold at 14c.; stock light. *Lard.*—In light stock, nominal. *Eggs.*—Firm and steady at 12 to 12½c. with a good supply.

HIDES.—The market continues very dull; prices are likely to decline still further.

SKINS AND WOOL.—Calf skins are a cent down; sheepskins are unchanged. Wool is steady at 28 to 29c.

SALT.—American is 15c. lower as quoted; Goderich, unchanged.

HARDWARE.—Trade is slightly improved. *Tin* is firm and higher.

FREIGHTS.—Rates by vessels to Oswego remain at 3c. American Currency. Flour to Montreal by steamer 20c.; grain 6c. Lumber to Oswego $1.50 per M, American Currency.

The following are the Grand Trunk Railway Company's summer rates from Toronto to the intermentioned stations, which came into force on the 19th ult. :—Flour to all Stations from Belleville to Lynn, inclusive 25c ; grain, per 100 lbs., 30c ; flour to Prescott, 30c ; grain 15c ; flour to all stations between Island Pond and Portland, inclusive, 75e ; grain, 38c: flour to Boston, 80c, gold ; grain 40c ; flour to Halifax, 90c ; flour to St. John, 85c.

—Mr. Frank Drummond has been appointed Manager of the Peoples' Telegraph Company. He is said to be a first-class operator.

—Mr. Thomas Drewry has been appointed local agent of the London and Lancashire Life Assurance Company.

Niagara District Bank.

DIVIDEND No. 31.

NOTICE is hereby given, that a DIVIDEND OF FOUR PER CENT. on the paid up capital stock of this Institution, has this day been declared for the current half-year; and that the same will be payable at the Bank on and after THURSDAY, the first day of July next.

The Transfer Books will be closed from the 20th to the 30th of June, both days inclusive.

By order of the Board,

C. M. ARNOLD, Cashier.

Royal Canadian Bank.

ALL shareholders in this Bank who are in arrears in their instalments are required to pay the same at the Head Office, or any of its agencies, within Thirty days from this date, otherwise such proceedings will be taken against all defaulters as the Board may deem most advisable. It is hoped that all will pay up promptly, in order that the Bank may resume at an early day.

By order of the Board.

T. WOODSIDE, Cashier.

W. J. MACDONELL,
301y MANAGER

EDINBURGH LIFE ASSURANCE COMPANY

FOUNDED 1823.

AMOUNT OF ACCUMULATED AND INVESTED FUNDS—OVER ONE MILLION STERLING.

HEAD OFFICE—EDINBURGH.

PRESIDENT—The Rt. Hon. the Earl of Haddington. MANAGER—D. Maclagan, Esq. SECRETARY—Alex. H. Whytt, Esq.

CANADIAN OFFICE ESTABLISHED 1857. WELLINGTON STREET, TORONTO.

CANADIAN BOARD—Hon. John Hillyard Cameron, M.P., Chairman. J. W. Gamble, Esq., L. Moffatt, Esq., J. B. Robinson, C. J. Campbell, Esq. David Higgins, Secretary.

THE Edinburgh Life Assurance Company offer to the public the advantages of a Canadian as well as a British Company. They have invested a large amount of money on securities in this country, and the Toronto Local Board have full power, by an Imperial Statute, to take risks, make investments, and settle claims in Canada, without reference to the Head Office, Edinburgh. Some of the old Policies in the Company, which became claims during the past year, were settled by payment of amounts double of those originally insured, in consequence of the large bonuses that accrued on the Policies.

Every information that intending assurers may require can be obtained at the Company's Office in Toronto, or at any of the Agencies which have been established in the principal towns in Canada.

J. HILLYARD CAMERON, CHAIRMAN. (35-1y) DAVID HIGGINS, SECRETARY.

THE ONTARIO PEAT COMPANY

CAPITAL, ... $120,000.

THIS COMPANY is PROVISIONALLY organized as follows:—

DIRECTORS:

HENRY S. HOWLAND, Esq., ... Toronto. | LARRATT W. SMITH, Esq.,..... Toronto.
JOHN FISKEN, Esq., ... Toronto. | ALFRED TODD, Esq., ...Ottawa.
EDWARD A. C. PEW, Esq.,... ....Welland.

TRUSTEES OF THE LANDS:

PELEG HOWLAND, Esq..... Toronto. | CHARLES J. CAMPBELL, Esq..... Toronto.

HIS COMPANY, with machinery now in working order and in course of construction, will be able to manufacture this year FROM TEN TO TWELVE THOUSAND TONS OF GOOD FUEL. Actual working shows—

I. That the fuel can be produced for $1.45 a ton, and with the improved machinery, at a much less cost.
II. That, for steam purposes, one ton of it is superior to one cord of wood, in the proportion of 31 to 27.
III. That, for domestic purposes, it is equal to wood or coal, and leaves very little ashes—about five per cent.

At the annual meeting of the Company in Montreal, it was decided to offer one thousand shares of Stock in Toronto. Mr. Isaac C. Gilmor has been appointed agent of the mpany in Toronto, and is authorized to receive subscriptions for the Stock.

Prospectus, Map of the Property, and further information may be obtained by addressing

LUCIAN S. WILCOX, MEDICAL EXAMINER.

Organized in 1846. Charter Perpetual.

The Largest Mutual Life Insurance Company. Numbering Over 75,000 Members.

BEING A PURELY MUTUAL COMPANY ITS ASSETS BELONG EXCLUSIVELY TO ITS MEMBERS

ASSETS, $21,000,000.—Acquired by prudent and economical management of twenty-two years, without the a a single dollar of original capital.

SURPLUS ASSETS, $6,361,967—All profits divided among the members. Each policy holder is a member. Ther no stockholders.

ITS DIVIDENDS—Have averaged over 50 per cent. annually. Total amount of dividends paid the members sin organization, $4,397,142.

ITS SUCCESS UNPARALLELED—It has arrived at the extraordinary condition where the income from annual int alone is more than sufficient to pay all the losses. Total amount of losses paid by the Company, $6,863,528.

ITS RESPONSIBILITY—For every $100 of liabilities it has $154 of assets.

LAST YEAR'S PROSPEROUS BUSINESS.

Amount insured fiscal year, 1867 .....$45,647,191 00 | Income received fiscal year, 1867.....$7,530,886

During its last fiscal year this Company paid to its living members, and to the families of deceased mem nearly $2,000,000, and at the same time added more than four millions to its accumulated capital.

The whole record of this Company has been one of prudent management and prosperous advancement. Amon older and leading Life Insurance Companies its average ratio of expenses to income has, throughits entire history, the lowest of any.

ITS LIBERALITY—It accommodates the insured by giving credit for part premium, and grants insurance to all the contingencies and wants to which Life Insurance is applicable.

It issues policies on a single life from $100 to $25,000.

MEDICAL REFEREES—J. WIDMER ROLPH, M.D.; H. H. WRIGHT, M.D.

LIFE ASSOCIATION OF SCOTLAND.

Invested Funds Upwards of £1,000,000 Sterling.

THIS Institution differs from other Life Offices, in that the BONUSES FROM PROFITS are applied on a special system for the Policy-holder's personal benefit and enjoyment during his own lifetime, with the option of large bonus additions to the sum assured. The Policy-holder thus obtains a large reduction of present outlay, or a provision for old age of a most important amount in one cash payment, or a life annuity, without any expense or outlay whatever beyond the ordinary Assurance Premium for the Sum Assured, which remains intact for Policy-holders' heirs, or other purposes.

The *London Scotsman* says of Scottish Companies:—

"We have on several occasions directed attention to the highly creditable manner in which the Insurance principle is carried out by Scot Associations. Scotland has been happily free from Insurance Company failures, and there is not an unsound Company in the Country. The inr shrewdness of the national character has not afforded much inducement to mere adventurers and speculators. A great deal of the success obtained the Scottish Associations is, we believe, due to the fact that those who give the sanction of their names to them, feel that by so doing, they take u themselves the responsibility of seeing that the affairs of the Company are properly conducted. Directors in fact are not considered mere necessary honorary appendages to a Company, but the machinery of management. We have been led to these observations by a perusal of the report of Scottish Provincial Assurance Company. We do not refer to it as the leading example of its kind, but as a fair type of the Scottish Assurance Corp ations, it was established in the "granite city" rather more than Forty years since, and it has extended its influence widely. The progress of business will bear successful comparison with any of the other Companies in the Country."

Referring to the "SCOTTISH PROVINCIAL" we observe in the *Post Magazine* and *Insurance Monitor* of London, of a late date, the following remar with reference to the enormous Reserve Fund acquired by the Company:—

"Suppose that the Scottish Provincial were to decline all new business and were to rely upon the present accumulated fund and future premi accumulations, for meeting the Company's obligations, it will be seen that the fund alone, at the last years rate of claims, would cover the whole of th for very nearly fifteen years to come: while in the interval a fund of much larger amount would be created out of the resulting premiums from unexpired policies, with considerably diminished claims to be provided for. Our readers can determine for themselves what are the prospects o Company whose annual premiums with interest therefrom, produce a surplus income of £78,000 acquired during the past year, to be added to an exist fund of upwards of Six Hundred Thousand Pounds Sterling.

Meetings.

RELIANCE MUTUAL LIFE ASSURANCE SOCIETY.

The annual meeting of the members of this Society (office for the Dominion in Montreal, James Grant Esq., Resident Secretary,) was held on April 27th, at the Society's office, London, England, Mr. W. W. Duffield, chairman of the board, presiding.

Mr. Edward Butler, the secretary, read the advertisement convening the meeting, together with the Directors' report, the report of the actuary(Mr. Samuel Brown), and the statement of accounts for the past year.

The Chairman, in moving the adoption of the report and accounts, said he had very great pleasure in meeting the members upon this occasion. In reference to the report the first thing which struck them was that, in the distribution of the bonus on the last occasion, the amount proved to be of a greater cash value than at any former period. Of course this was very gratifying to those who participated in the distribution, but the Directors hoped that, upon some future occasion, they would have the opportunity of putting that paragraph in far stronger language. As the report told them, nearly all the members who had previously applied their bonus to the temporary reduction of their premiums had adopted the recommendation of the Directors, and accepted the system of a permanent reduction of their annual payments. With regard to the new premiums of the past year, which, of course, represented the new business of the Society, he would call attention to the fact that this year they had only received in new premiums the sum of £7,711, whereas last year they had received £7,894. This would appear at first sight to show rather a retrograde movement, though to a small extent,—still when he told them that last year they received in single premiums the sum of £369, and the single premiums this year represented a sum of £63 only; and if they deducted these sums from the respective amount of premiums received this year and last year, they would find that the balance was really in favor of this year. (Hear, hear.) He thought he might fairly call their attention to the depressed state of trade, because there was no doubt that whenever the general business of the country was depressed—and this was proved by the statistics of all the old insurance offices—there was a gradual falling off in the number of assurances effected, and the moment the general trade and commerce of the country revived they would find a great increase in their new assurance premiums. (Hear, hear.) He, therefore, thought that taking that fact into consideration, they might fairly congratulate themselves that they had been able during the past year to increase the new business of their office. There was another fact which he thought he ought to call attention to. On the last occasion that they met in that room, he was unfortunately compelled to state that the claims by death had exceeded the estimate of their actuary—that, although the three years with which the bonus period ended, showed an amount of mortality something under the actuary's calculations, still during the year 1867 their death claims were above the average; and exceeded the estimated amount. If they looked to the report they would find that the amount of claims by death paid during the last year was less by over £3,000 upon a sum of £24,000, which was the actuary's estimate of the year's mortality—therefore, that whatever other disadvantages they might labor under they had saved something like £3,000 during the last year on our actuary's estimate of the amount required to meet the claims by death. (Hear, hear.) Mr. Samuel Brown had made an elaborate report with regard to the affairs of the Society, and he (the chairman) thought that as they had increased their accumulation fund something like £20,000 during the past year, and that the cash estimate of the liabilities was £225,484, and that they had assets to meet them amounting to £236,703, they might be well satisfied with the position of the office. They found a surplus of something like £11,000 in their assets over all the liabilities which the actuary calculated the present policies in the office laid them under. (Hear, hear.) There was also another point to which Mr. Brown—than whom a more careful and able actuary did not exist in London—called attention in his report. He said that, in making this valuation, he had taken as his basis the Equitable Experience Table of 3½ per cent., as published by Mr. Griffith Davies. Now, he believed he was correct in saying that this was not the table taken by all the insurance offices, neither was it the table most favorable to the appearance of an office. It was strictly in favor of the policyholders, and not in favor of the office, and any person knowing that their liabilities were calculated upon this principle might be thoroughly well satisfied that the actuary had not painted their Society in brighter colors than it deserved; but, on the contrary, it was to a certain extent rather an unfavorable calculation so far as the office was concerned. (Hear, hear.) There was another fact worthy of notice, and that was that the whole of the bonus reserves were allotted last year, and, in addition, Mr. Brown told them that he had reserved the full loading of the future premiums. This plan was not always adopted by assurance offices; it was not the custom to reserve the full loading of the future premiums in one year, but a portion was appropriated every year for the purpose of showing the surplus between the assets of the Society; and, therefore, they might be thoroughly satisfied that in the actuarial calculations here made, Mr. Brown had put the most unfavorable construction on the Society's position, and they might fairly consider that the real position of the Society was better than it was represented to be in the actuary's report. (Cheers.) He did not say this by way of finding fault with what that gentleman had done, but he mentioned it as showing the extreme caution and care with which he valued the affairs of a Society of this kind, and how far they might rely upon the valuation placed before them. There was one other point; during the past year the Directors thought it advisable to avail themselves of an opportunity which offered itself of purchasing the lease of their premises—the unexpired lease of over 40 years; at such a price as would pay them a clear 5 per cent. upon the money expended. (Hear, hear.) This had enabled the Directors to lay out a considerable sum for the purpose of making the office that which it was necessary to make it, in order to meet the increasing business of the Society, and he entertained no doubt that

they would approve of what the Directors had done. They had also made some change in the officers of the Society; they had endeavored to extend their operations in various parts of England, Scotland and Ireland, and also in Canada, and while upon this ground he might mention that some gentlemen had intimated that the expenses of the Society upon this portion of their operations had been rather larger than in previous years. That was perfectly true, but shareholders must look upon that expenditure not as the expenditure of the one year, but as an expenditure to be spread over a series of years, and to come back in the shape of a considerable amount of new business. They had not incurred that expense in places where they did not think they would get a remunerative business in return, and it was the firm belief of the Directors, and also of the officers of the Society, in whose judgment they placed the utmost reliance, that the result of this expenditure would be a considerable accession of new business to the Society. (Hear, hear.) Speaking of the expenditure they had made in the office proper, he might mention that the Directors had thought it right to give to their secretary (Mr. Butler) some assistance in the shape of an assistant secretary. Mr. Skirving had been appointed in order that every department of the office might be well overlooked, and the business would, they were sure, continue to improve under their able management. (Hear. hear.) They had appointed Mr. James Grant as their resident secretary in Canada, a gentleman in whose favor they received testimonials of a most satisfactory character. He resided in Canada for a considerable number of years, and acted there for one of the first offices in Scotland, and they received from that office a testimonial with regard to that gentleman which induced them without hesitating for one moment to place him in Canada, as their Secretary, and they sincerely believed, from all they had heard of him and from the amount of assurance business he did in Canada, while acting for the office to which he had referred, that he would be able to increase the business of the Society in that part of the world to a very great extent. The chairman concluded by moving the adoption of the report and accounts.

The Rev. Mr. Whittington seconded the motion.

Some discussion followed on a suggestion of Mr. Pulling, as to whether it would not be advantageous to the Society if a fire branch could be added to its business, but it was stated by the chairman and by the solicitor that a fire business could not be carried on under the existing deed of settlement, which provided only for a life business.

The report was adopted *nem. con.*

The retiring Directors and auditors were then re-elected, and a cordial vote of thanks having been voted to the chairman, directors, and the various officers of the Society, the proceedings terminated.

STANDARD LIFE ASSURANCE COMPANY.

The annual meeting of this company was held in Edinburgh on the 19th April, 1869, George Moir, Esq., in the chair. The annual report and the balance sheet having been submitted the chairman then addressed the meeting as follows:

The progress of the company during the past year has been so fully brought before you in the report of the Directors, that little remains for me to say in addressing you from the chair; but it may, perhaps, tend to a fuller appreciation of the results communicated, if I place them before you in a somewhat less formal shape than they are are given in the report.

The first point which claims your attention is the large amount of new business offered to the Company during the year 1868, being larger than in the previous year—which was one of marked increase—and of such an amount as to bear ample testimony, not only to the favorable position which the company occupies in the public estimation, but to its wide-spread and influential connection. Neither the amount or the number of assurances accepted quite reaches the sum of 1867 although the amount and number proposed exceed its results: but the Directors consider themselves quite entitled to claim credit for the exercise of a wise discretion in entering into a smaller number of contracts out of a larger number of proposals; indeed, the "Selection of Lives," which is the point involved, is one of the most important parts of the Directorial Duties, requiring constant watchfulness and attention.

But while making this explanatory statement, I would claim for the year 1868 a special advantage over the year 1867 in its general progress, although its actual progress may have been very similar; for it is a noteworthy fact, that, while within a few weeks of the closing of the year's business the year 1868 was in advance upwards of £100,000 in new assurances over the same period in 1867, the progress made in these few remaining weeks was so much interfered with by the general elections, that the anticipated large increase, of which the Directors had just hope, was not realized at the close of the year, although the large and satisfactory results now reported were reached.

Next in importance to the selection of lives is the investment of the Company's funds, and unrelaxed attention is paid to that department of management. The rule of the Board is to invest chiefly on the security of real estate, as the most reliable mode of safely employing the funds which, in the course of the business, it is their duty to accumulate and protect, and it will be observed that the company have upwards of two-thirds of their funds invested in first-class mortgages and landed securities. The other securities and investments held are also unexceptionable, although not coming under the class of "mortgages." Some are first-class debentures and stocks guaranteed by the government of India; others consist of government securities; and loans to the Company's policyholders within the value of their policies; while a considerable amount consists of the remaining investments of those companies whose business has been transferred to the Standard, and which, being of a more general character than those we are in the practice of selecting in connection with our larger opportunity of investment, cannot be so easily branched under precise heads. The obligations of other companies; investments in connection with the Colonial branch; current balances due by banks, agents and others; and "miscellaneous property," make up the total. The Directors are satisfied that the investments held are of the first-class, a point which will be more fully brought out next year, when a committee, specially appointed, will report on each separate transaction, with a view to the investigation of 1870.

The company continue to receive a fair and remunerative rate of interest on their investments. It is not possible to secure a larger rate without seeking less eligible transactions for the investment of the funds, which the Directors are not prepared to do; and, pursuing that course, they will consider themselves fortunate if they can continue to realize an average return of 4½ to 4¾ per cent on the large sums for the investment of which they have to make provision. Such a return will, it is scarcely necessary to add, prove highly remunerative, and yield a considerable margin of profit.

The quinquennial periods which separate our investigations and divisions of profits succeed each other with what seems to be increasing rapidity, for the company's transactions are now so extensive, that, no sooner has one period been closed and reported on, than the attention of the Directors is called to the approach of another investigation. Already the manager and his assistants have, for twelve months, been engaged in the preliminary arrangements and calculations for the periodical investigation of 1870. These investigations have become a truly gigantic work, and the more so, as the Directors, acting on the advice of their manager, are not content to investigate the Company's position by the test of a set of observations only, but, watching closely their own experience and that of other companies, as well as the Registrar-General's observations as to the value of life among the population generally, they do not hesitate, acting on the wide discretion which the company's constitution affords, to use every precaution, by the employment of new and improved data, to keep the institution on the soundest position. The Manager expects that all Assurance companies will derive very great advantage from an enquiry now in progress into the mortality experienced by the Scotch offices, and by a separate inquiry instituted into the results shown by these offices in combination with a select number of the English companies. The results on both sets of observations will shortly be published, and the Directors will not fail to avail themselves of the results.

The bill as to Assurance Companies' accounts which has been introduced into Parliament this session is an important one, as, if passed into law it will enable the public to see the progress and position of the different offices by the registration of accounts in a set form. Your Manager has acted on the committee of managers for the revision of the bill, and anticipates confidently that its adoption will be a service to the cause of Assurance. The balance-sheets and schedules required are highly important; and whether the measure becomes an Act or not, the Directors propose to adopt these forms, as adjusted by the committee, for the better exemplification of the business in future years.

On previous occasions, when you have done me the honor to call me to this chair, I have dwelt upon the means employed by the Directors to extend the business, but I do not now find reason for any observations under that head, as, in the advanced position in which we now stand we have very nearly, I think, exhausted our powers of extension. We must now endeavor to consolidate our connection, and to render our source of supply as far as possible continuous. No doubt we require to be alive to the Company's interests and alert in maintaining its high character; but I think we act wisely in laying out for ourselves not plans for increased extension, but plans for the permanency of the institution, doing the work which we have taken in hand conscientiously and prudently, while we afford as much benefit as possible to those who confide in us.

The Report was unanimously adopted.

FREEHOLD PERMANENT BUILDING AND SAVINGS SOCIETY.

In presenting the tenth annual report of the Society's affairs—full particulars of which are herewith annexed—the Directors have the satisfaction of informing the shareholders that the business of the Society has been steadily increasing, the loans on mortgage being $85,445 in excess of those during the previous year. There has been a considerable increase in re-payments as well as deposits, and all the funds of the Society are now profitably employed.

The profits of the year after deducting all expenses, amount to $43,739.90, out of which half-yearly dividends have been declared, amounting together to $36,054.24. $7,524.13 has been added to the reserve fund, which is now $40,000, and the remaining $161.53 is at the credit of contingent account.

The position of the Society being so favourable the Directors having resumed their former practice of paying a ten per cent dividend, which was reduced for a time in order to accumulate a reserve of ten per cent on the entire capital. This has been accomplished, in connection with the fact that the securities held by the Society are of undoubted character, the Directors apprehend

ifficulty in paying in future the rate of dividend ow declared.

It will be observed that besides carefully examing all the mortgages and other securities, the uditors have certified to their intrinsic value. he performance of these duties by competent ersons can, in the opinion of the Directors, hardbe over-estimated, when it is considered that ie real position of a Building Society can only ascertained by a proper valuation of its securies.

It affords the Directors pleasure to state that ie Secretary and other officers of the Society ntinue to discharge their respective duties to the tire satisfaction of the Board.

All of which is respectfully submitted. WM. cMASTER, *President.* CHARLES ROBERTSON, *retary.*

t the Annual General Meeting of the Shareders, held on Wednesday, 2nd June, the follow- gentlemen were elected directors for the current ; namely:—Hon. Wm. McMaster, James hie, Esq., Alexander Murray, Esq., James tin, Esq., A. T. Fulton, Esq., Henry S. Howland, , Wm. J. McDonell, Esq., and at a subent Meeting of the Directors, the Hon. Wm. Master was re-elected President, and James hie, Esq., Vice-President, Charles Robertson etary.

UDITORS' REPORT—1869. *To the President Directors of the Freehold Permanent Building Savings Society*: GENTLEMEN,—We certify we have examined and compared the Books, rities and Vouchers, and have found them correct, and in accordance with annexed Balance Sheet. We have also checked the valuations of the said Securities, and are pleased to observe the improved position of the Society, with a large reserve, enabling the return to an increased dividend. Respectfully your obedient servents, SAMUEL SPREULL, WM. WILLIAMSON, Auditors.

WELLINGTON, GREY & BRUCE RAILWAY.

The third annual meeting of the shareholders of this Company was held at Hamilton, some days ago; Mr. Adam Brown, President, in the chair.

The Secretary read the report of the Directors for the past year. The report adverts to the visit of Alderman Dakin, Mr. Falconer and Mr. Brackstone Baker, and states that since that visit active negotiations have been going on and that arrangements are completed, by which the Great Western Railway Company agree to supply rolling stock and work and maintain the road constructed for 70 per cent. of the gross earnings, and further, that 20 per cent. of all the traffic interchanged between the two companies shall be set aside annually to redeem the bonds of the Company at par. The contract for the first section of the line, from Guelph to Fergus, has been let to Mr. Donald Robertson, of Queenston. The contract for the iron rails for the same section was awarded to Mr. John Proctor, of Hamilton. The first shipment is at sea and will shortly arrive. The Directors express their confidence that the line will be opened for traffic on or before the 1st January, 1870. So soon as the equitable bonuses are granted by the County of Bruce the Directors promise an extension of the line through that County. Satisfactory arrangements have been made for the right of way; the shareholders are also reminded that the Township of Normandy granted a bonus of $50,000 in aid of the project since the last annual meeting. A vacancy on the Board caused by the death of the late Dr. Parker, has been filled up by the appointment of A. Sproat, M.P., for North Bruce. The total expenditure of the Company for the first two years foot up to $18,378. The report concludes with a reference to the opening up of the North-West Territory, and the belief is expressed that the Wellington, Grey and Bruce Railway will have a portion of the increased travel and traffic which must result.

The report of the Company's engineer, Mr. George Lowe Reid, is subjoined. He states that rails and fastenings have been purchased in England, amounting to 1,700 tons, all in course of shipment and that the first cargo of 400 tons will shortly be at hand. The contractors are now at work clearing the line of standing timber, getting out ties and timber for bridges and culverts, and grading the road bed under the supervision of Mr. Ridout, who has been steadily engaged since the snow left the ground, in getting out the slope-stakes and determining the positions and levels of all the bridges and culverts. This preliminary engineering work is now completed, and everything has been done to place the contractors in a position for the vigorous prosecution of their work.

The Director's report was adopted, and the shareholders then proceeded to the election of the Board of Directors for the ensuing year. The retiring Board was unanimously re-elected as members of the new Board: Adam Brown, President; George D. Ferguson, Vice-President; Donald McInnes, J. M. Fraser, A. Sproat, A. T. Wood, William McGiverin, James Turner, John Brown, John Ferrie, and James Wilson.

At a subsequent meeting of the Directors, Mr. Adam Brown was elected President, and Mr. Geo. D. Ferguson, of Fergus, Vice-President.

—A ponderous peat machine for the Anglo-American Peat Company, costing $10,000, has been landed at the Welland peat beds by the steamer Acadia.—*St. Catherines Times.*

Insurance.

FIRE RECORD.—Quebec, June 4.—The extensive stables attached to the residence of G. H. Simard, M.P., at St. Feris, were burned down. Property including valuable horses, carriages, &c., to the amount of $6,000 was destroyed. No insurance. Origin of the fire unknown.

Ashfield Township, Ont., May 25.—Barn and stable of Jas. McKnight were consumed. A quantity of grain, lumber, fanning mill, &c., were also lost. Loss about $800. Fully insured in the Agricultural Mutual. The fire originated from some burning brush.

Acton, June 7.—A telegram says:—a fire last night consumed five houses and some outbuildings, also one span of horses. The principal losers are: Thos. Ebbage, dwelling house and grocery; loss about $800. James Bell, span of horses, value about $250. Chas. Weiger, tea shop; loss about $200. Mrs. Fearnley, household furniture, &c.; loss not yet known. No insurance on any of the property. The cause of the fire is not known.

St. John, N. B., May 26.—House of Thomas Murray, Sussex, was totally destroyed, with the household furniture, &c. No insurance. Loss about $2,000.

East Gwillimbury, Township Ont., May 27.—Dwelling house of Edward Provost, Harrold Road, was consumed by fire. No particulars.

Quebec, June 1.—A barn belonging to one Trudel, of Beaufort parish, was burnt to the ground. It was struck by lightning during a thunderstorm.

Pickering Township, Ont., May 25.—Head's Mill, near Duffin's Creek, was consumed; cause unknown.

St. Catharines, June.—The grocery store of F. Clifford, St. Paul Street, caught fire in the cellar, and was clearly the work of an incendiary. The stock, though run down low, was insured in the Western for $2,500. At the instance of Mr. Peter McCallum, Clifford was placed under arrest.

Toronto, June 8.—A fire broke out in the auction rooms of J. H. Dickson, at No. 12, Yonge Street; Dickson's stock was insured in the Queen for $1,000, and Lancashire, $1,000; loss, partial. The confectionery store occupied by Weissinger, but lately sold by the Sheriff to Haberhouse, was insured for $1,000 in the Lancashire; partial loss. The Ætna of Hartford had a policy of $470 on the furniture; loss about $195. The building is owned by David Burns, and is insured in the Lancashire for $4,000; loss $800 to $1,000; cause unknown.

Hamilton, June 8.—A fire broke out in Magill's hardware store, King street, the premises were gutted, and the flames spread to the adjoining store eastward and injured the top story. The goods of Mr. Adams, plumber, and Huton & Wood, tailors, were damaged by removal. Magill's loss, from $60,000 to $70,000; insured for $45,000 in the following companies:—Commercial Union, $15,000; Western, $4,000; British America, $4,000; Hartford, $6,000; Ætna of Hartford, $6,000; Home, $3,000; Victoria Mutual (old branch), $1,000. The building was owned by Stinson's Bank, and was insured for a comparatively small amount—$1,200 in the Hartford, and $1,000 in the Lancashire. Building adjoining on the east, owned by J. Stinson—Damage to roof and upper stories, over $2,000, insured; J. A. Chadwick, occupant, damage to whose stock of electroplate by water, about $1,000; Huton & Wood, tailors, stock damaged by removal, covered by $1,600 insurance in the Royal; J. Adams. same building, plumber, loss $1,000 insured for $200, building damaged about $5,000.

Richmond, Quebec, May 27.—Scott's Hotel was burned down; supposed to be the work of an incendiary.

Napauee, June 1.—A fire broke out in a small building and soon enveloped the large frame building of Briggs & Waddell, occupied by various parties. Wells' new building was damaged to the extent of $1,000; insured for $500. Mr. Allan,

chief constable, lost about $500 in furniture; no insurance. Burgess, baker and confectioner, lost $200; no insurance. Mr. Fralick, general grocer, $500; no insurance. Mrs. Bell, $100. Mr. Brigg's loss $1,200, insured in British America for $800.

THIS Company—formed by the association of nearly 100 of the wealthiest citizens of Montreal—is prepared to transact every description of LIFE ASSURANCE; also, to grant Bonds of FIDELITY GUARANTEE, for Employees holding positions of trust.

Applications can be made through any of the Company's Agents, or direct to

EDWARD RAWLINGS, Manager.

Agent for Toronto: W. T. MASON. | Agent for Hamilton: R. BENNER.

THE CANADIAN MONETARY TIMES AND INSURANCE CHRONICLE *is printed every Thursday evening and distributed to Subscribers on the following morning.*

Publishing office, No. 60 Church-street, 3 doors north of Court-street.

Subscription price—

Canada $2.00 *per annum.*

England, stg. 10*s. per annum.*

United States (U.S.Cy.) $3.00 *per annum.*

Casual advertisements will be charged at the rate of ten cents per line, each insertion.

Address all letters to "THE MONETARY TIMES."

Cheques, money orders, &c. should be made payable to J. M. TROUT, *Business Manager, who alone is authorized to issue receipts for money.*

☞ *All Canadian Subscribers to* THE MONETARY TIMES *will receive* THE REAL ESTATE JOURNAL *without further charge.*

The Canadian Monetary Times.

THURSDAY, JUNE 10, 1869.

A NEW CANAL PROJECT.

Is is proposed to construct what is called a ship canal from the town of Niagara to the Welland Canal, above lock No. 25 in the village of Thorold, and to continue the work to the upper Niagara River to Chippawa, and a bill has been laid before Parliament by Mr. Angus Morrison having that as its supposed object. The lock named is 350 feet long, 70 wide, and 10 deep, and the very dimensions prove that the term "ship-canal" is unwarranted. The cost of the work is estimated at $5,300,000, which is much below the probable cost, if undertaken, and the period assigned for the completion of the undertaking, namely, two and a half years, is too limited in point of time. The whole project seems to have in view the advantage of Oswego; it would certainly be inimical to the St. Lawrence. The enlargement of the Welland itself is a matter of expense, not of difficulty, and in no way should it be allowed to be thwarted by a rival scheme. Were Mr. Morrison's canal in operation, the whole Oswego trade, and the large river craft for which it is designed, would pass through it to Oswego without in any way benefitting any portion of Canada. It is simply a Georgian Bay scheme in another place with even more objectionable features. It is not in this way that the imperfections of the St. Lawrence are to be removed. Indeed, this very canal would at once subtract a certain portion of the dues payable to the public revenue and could in no way advance the great policy of the Dominion, which is briefly,—Unity in the navigation of the St. Lawrence developed to the greatest possible extent. On the contrary it would turn traffic away from Canada.

The route is objectionable. The ground is suitable between Niagara and Thorold, but thence to Chippawa and against the strong current of the Niagara river, the line has little in it to recommend it. Indeed, it was in this direction that the Welland Canal was originally marked out, but it was abandoned, because it did not answer expectations.

The fact cannot be overlooked, that a very large sum is necessary to complete the project. We have had some experience in schemes of this nature in the Province. The Grand Trunk, which was to have been built with stipulated aid, before its completion, became a debtor to the Province to the extent of nine millions of dollars. The Welland Canal itself is a case in point. It was begun by a private company with an empty exchequer, and a knot of incapable men obtained control of the work to retain it all their lives. Every one knows, or should know, what was the cost to the community.

On many grounds, therefore, is Mr. Morrison's project objectionable, but as far as the Government is concerned we fail to see how they can allow the transfer from public to private control of that which it is, essentially, the perogative and duty of the Central Government to direct. The resolutions on which Confederation is based recognize the obligation to improve the St. Lawrence, and if there is the slightest inclination to act on that obligation, the Legislature will scarcely see the expediency of such legislation as that asked by Mr. Morrison, or deem it a duty to encourage a project hostile to Canadian interests, and of service only to the Oswego trade and those who operate in it. The mercantile interests of Eastern Canada and of Montreal are equally concerned with those of Toronto and Central Canada, and we cannot be expected to make our welfare subservient to that of Oswego. We contend that the interests of Montreal are identical with those of Western Canada in the improvement of the St. Lawrence navigation, and we expect that our representatives in Parliament will take care that no private scheme whose object is one of hostility, shall be permitted to stand between us and the attainment of an object which it is the proclaimed policy of the Dominion to secure.

THE ROYAL CANADIAN BANK.

It has been decided to subject the affairs of this Bank to a searching investigation. Two well known and reliable men in each locality where an agency exists will be asked to go over the business of the agency, and report to a Central Committee. This Central Committee will consist of the Mayor of Toronto, John Crawford, M.P., and John Gordon, President of the Toronto, Grey & Bruce Railway Company. Should Mr. Gordon, who is in every respect well qualified for the task, feel unable to give the necessary time, it is not improbable that Mr. McGiverin, of Hamilton, will be asked to take his place. The application to Parliament for power to amalgamate, is to provide against future contingencies, but the feeling is universal among the Bank shareholders that resumption is not only possible but advisable. A reduction of about $350,000 has been made in the Bank's liabilities to the public since the institution suspended. The following is a statement up to the 5th June:

LIABILITIES.	
Circulation	$709,966
Balances to other Banks	26,556
Deposits	711,120
	$1,447,643
ASSETS.	
Coin, &c	$146,625
Property	16,119
Government Securities	128,911
Notes of other Banks	37,175
Bank Balances	96,269
Notes discounted	2,422,307
	$2,847,408

THE NARROW GAUGE RAILWAY

Remarkable progress has been made in obtaining subscriptions to the stock of these roads. For the Toronto and Nipissing about $160,000 has been subscribed—more than is requisite to enable the company to complete its regular organization. It is intended to receive still further amounts, as the more stock is taken, the less money will have to be borrowed. For the Toronto, Grey and Bruce stock, to more than $200,000 is secured, and without doubt the entire amount asked for—$300,000—will shortly be absorbed.

the present state of the money market, it was not expected that the public would have shown such readiness to invest in these enterprizes, and the fact that they have done so with such promptness, must be taken as an indication that they are regarded with favor by men of capital.

INSURANCE RETURNS.

We devote a good deal of space to the publication of the insurance returns laid before Parliament, a portion of which only we are able to make room for this week. On page 84 will be found detailed returns of the fire business done by the different stock companies. On page 683 we give the total Fire business done by all the companies, and also the total Life business, to which our readers will please refer.

RELIANCE MUTUAL LIFE ASSURANCE CO.—The Report by the Directors shows a steady rate of increase in the business of this Company. This appears very clearly in the following from the London *Post Magazine*: In 1866 the new assurances amounted to £221,675; in 1867 to £222,945; in 1868 to £223,257. In the last two of the three years the difference was only £312; as nearly as may be, the amount of a single transaction, according to the average of the policies issued. The new premiums are of like uniformity, £7,894 in 1867 and £7,611 in 1868. In the former year, as explained by the chairman at the meeting, one policy was issued for a single and final premium of £369, and in 1868 one policy for a like single and final premium of £63. Making these deductions the results will be £7,525 and £7,548:—a difference of only £23 in the receipts of so many thousands of pounds spread over the long period of twelve months—the difference, small as it is, being in favor of the past year's new business. The agreement is very remarkable; and serves to show that the agencies of the office are in a complete state of organization, and that the engagements are entered into with persons belonging to the same classes in society; so far as the fact can be ascertained from the average amount assured under each policy.

Mr. James Grant, formerly of the Life Association of Scotland, in Montreal, and for some time resident Secretary of the Edinburgh Life in Dublin, has been appointed to the management of the Canadian branch.

STANDARD LIFE ASSURANCE COMPANY.—A perusal of the Chairman's speech at the annual meeting must impress every one who comprehends the position and magnitude of the Standard's business, with the conviction that that gentleman has a just appreciation of the proper course to pursue in the interests both of the shareholders and policyholders of the company. When a Life Assurance organization has attained such results as an annual revenue of about three and a half millions of dollars, and an accumulated fund of twenty millions, the great aim and study of the management should be, not to extend, but to fortify; not to strive after new business, but to conserve and protect that already secured. The Directors show that such is their policy in rejecting nearly four hundred proposals for assurance, during the year, and declaring that they have exhausted their plans of extension, and also by their determination to invest their funds only in the very safest and most non-speculative way, though the average return is moderate. About two-thirds of the Company's funds are invested in mortgages producing 4¼ to 4½ per cent. Reference is made by the chairman to the bill introduced into the English Parliament, which has been revised by a meeting of the managers of the different life companies; and he expresses the determination of the company to make out their statements according to the form of accounts provided for by the bill whether it becomes law or not. This is wise. The more publicity that is given to the affairs of all sound companies the more confidence will the public repose in them; such, at least, is our belief. In these days people prefer to rely upon facts and figures rather than upon the unsupported statements of Directors and managers. We need scarcely remind the readers of THE MONETARY TIMES that the Standard has $150,000 cash deposited with the Receiver-General for the security of Canadian policy holders, and that it stands in the very front rank of English Life Assurance Companies.

FREEHOLD BUILDING SOCIETY.—The report for the past year shows that the loans on mortgage were $85,445 in excess of the previous year, and that there has been a considerable increase in repayments and also in deposits. The profits of the year amount to $43,739.90 out of which $36,054 has been paid by way of dividend. The reserve fund has been increased by $7,524 and it now amounts to $40,000. In consequence of the progress thus shown and the accretion of the Society's reserve to the sum named; the directors have thought it well to resume the payment of 5 per cent. half-yearly dividends. The whole dividend for the past year was at the rate of 9 per cent. The retiring directors were re-elected.

NEW YORK CORRESPONDENCE.

NEW YORK, June 5, 1869.

To the Editor of the Monetary Times.

The appearance of the annual report of either the New York or Massachusetts Department, is always an "interesting event," and creates a good deal of interest and some flutter in our insurance circles. We have before us, just received, Part I (Fire and Marine Insurance) of the Massachusetts Report on the business of 1868. This Department has been administered with such conspicuous ability for many years that its tabular deductions form the experience of the business, always carry great weight with the underwriting profession throughout the country. With much of their Report's details, the readers of the *Monetary Times* could have no possible interest, but there is still much of general interest, and lessons to be learned from it, affecting the business equally in the Dominion and the States.

The law of Massachusetts requiring annual reports from joint stock companies dates back to 1837, and the report of the Secretary of the Commonwealth for that year was the first report of the kind, in this or any other country. And *mutatis mutandis*, of 48 stock companies covered by that report only 11 survived to put in an appearance for the year 1868. But it was not until 1852 that *all* companies of every description, in and out of the State, were brought under legal supervision. In 1854 began the career of the Insurance Commissioners and in 1855 a Department was erected.

While the growth of the Massachusetts' companies has been considerable during all this period, the noticeable fact is, that the best of the Boston companies, such is the characteristic timidity of Massachusetts' capitalists, still persist in doing a local business, consequently, and naturally the business of the New York and other offices has increased ten-fold from 1853 to 1868, and amounted for the latter year to $250,000,000 of property insured, and the figures show that this large business was done with a very handsome profit to these companies. So much for New York enterprise, which knows "no pent up Utica." The outside companies *netted* over $1,000,000 premiums for 1868. Commissioner Sanford does not seem to like this, but admits that the only remedy is for the Massachusetts' companies to make reprisals, get out of their well worn ruts, and "go in and win."

Commissioner Sanford does not believe in the recent "hue and cry" about the unprofitableness of the insurance business. The companies have been demonstrating the very small margin of profit which the business yielded, but at the same time most of them have been adding a very liberal margin to their surplus. Certainly the condition of the Boston companies is strong and comfortable enough.

Any attempt to analyse the numerous elaborate tables in this report would be impracticable and of little interest to your readers. In 29 Massachusetts stock companies, the average ratio of loss to premiums received was 38.1 and the ratio of loss to risks written .368—ratio of expenses to premium received, 20.28 and to gross income 16.84. No less than 90 companies of other States, are represented in the Old Bay State. Average ratio of loss to premiums received 49.18; of loss to risks written 52.50; of expenses to premiums received 24.97; and of expenses to gross income 22.38. It will be seen that the home averages are much the lowest.

On the whole it is gratifying to record the fact, that the year 1868 has been attended with some degree of relief in the amount of property destroyed as well as with increased strength and profit to the companies. The Massachusetts Joint Stock Companies declared nearly 13 per cent. to stockholders and carried nearly 20 per cent. to surplus account. The companies of other States have done well, but not equally well. They declared 9½ per cent. and carried 5 per cent. to surplus account. The per centage of fire loss was 49 per cent. of the cash premiums and has been about 60 per cent. average for 11 years. But it appears, when the subject is considered in the light of the *cost to the insured* the result is not so satisfactory. The Joint Stock Companies of Massachusetts and other States, in 1868, paid 51 cents of loss on each $100 of fire risks written, against about 48 cents average for 10 years, and charged $1.06 premium, against an average of from 75 to 80. The rates are therefore increasing, but the losses are not diminishing. The business has been done at below the supposed average in England and in this country 30 per cent., viz.: for 25 per cent.

The National Board of Fire Underwriters, of whose last annual session in this City I furnished you an account in a former letter, has now become such a power among the companies, that Commissioner Sanford does not deem it impertinent or beneath the gravity of an official document to discuss and sharply censure its action. He seems to think that the machine has thus far been run

mainly for the purpose of securing an advance in rates, instead of doing the one thing needful, viz.: endeavouring to procure a reduction in the annual amount of loss. The present admitted evils of the system are:—hasty adjustment of losses—hasty payment of the same—over insurance—and the granting of unlimited privileges for other insurance. Yet it is charged that the Board took no practical action with reference to a reform of these evils; and with reference to a determination of the question,—what is an an adequate rate?—the Board is charged with further dereliction in not having, after admitting the necessity of a bureau of statistics, taken some practical action for the establishment of one.

The Commissioner's parting kick is, that the only thing that will reconcile the public to the continuance of present control of the Board over the price of insurance, or that will make its existence desirable in any aspect affecting the public good, is that it address itself to the immediate reform of acknowledged evils in the practice of the Companies, and reduce the rates of insurance by preventing the fearful amount of fraud and loss these pernicious practices entail upon the public. But if the Commissioner had been present at the last annual session of the Board as your correspondent was, he would have seen how many conflicting sections there were among the members present and how reluctant many companies are to submit to any general action which may be supposed to affect their local interests. The Board is but a congress of the companies. It has no original, chartered or delegated powers. Its leading minds are willing to take advanced measures and to cover the ground fully. But it can advance only with and express the current sentiment of the companies. Let the companies give it in some form original jurisdiction, agree to be unanimously bound by its action, and all causes of complaint on the score of inadequate and inefficient action will be removed.

The general aspect of insurance business in this city, is at present one of repose. All branches of trade are dull, and we are approaching the heated term when matters will be worse. There is little to be spoken of outside routine office affairs, except that the fire losses for the past two months have been unusually heavy. The largest agency company in this city reports its losses for May as fully double what they were for the corresponding month of 1868. M. A. C.

Financial.

TORONTO STOCK MARKET.

(Reported by Pellatt & Osler, Brokers.)

There was a marked improvement in business this week; Bank and Building Society stocks have been largely dealt in, and in one or two cases at a considerable advance.

Bank Stock.—Montreal shows a large advance on last week's quotations, sales have taken place since the opening of the books at 151 to 157, the stock is firm at the latter rate. There are buyers of British at 105, very little in the market. A large amount of Ontario has been thrown on the market since the opening of the books and the price is somewhat lower. Toronto has advanced over 2 per cent. buyers to-day offer 120 but there are no sellers. A small sale of Royal Canadian took place at 49, very little offered at quoted rates. Some small sales of Commerce took place at 103½, there are buyers at that rate but little on the market. There are buyers of Gore at 35 and sellers at 36½. Merchants has advanced 2 per cent., buyers to-day offer 111½. There are buyers of Quebec at par, but no sellers. Sales of Molson's are reported at 108½ and 109, sellers at the latter rate. Buyers offer 97½ for City, no sellers under 98½. Sellers ask 109 for Du Peuple, with buyers at 108½. Nationale is nominal at 107 to 108. There are buyers and sellers of Jacques Cartier at 105½ and 106 respectively. Union is asked for at 107 to 107½, none in the market. Mechanics' nominal.

Debentures.—Dominion Stock sold at 108; Sterling six per cents are asked for at 103, sellers want 104; fives are offered at 91. Large sales both of Sterling and Currency Toronto bonds have taken place at rates to yield about 7 per cent. interest. A few County are on market at ½ per cent. premium, buyers offer par.

Sundries.—Large sales of Canada Permanent Building Society have taken place at 125½ and 126, closed firm at the latter rate. Western Canada Building Society has been freely dealt in at 121 and 121½. Freehold Building Society sold at 113, 113½ and 114, buyers freely offer the latter rate, but holders ask for an advance. Nothing doing in Montreal Telegraph Company, last sales 131½ to 135. Large sales of Canada Landed Credit Company were made at 79 to 79½, there are buyers at the former rate. Buyers offer 56 for British America Assurance, sellers at 60. Mortgages are asked for to pay 8 per cent.

REVENUE AND EXPENDITURE.—Statement of Revenue and expenditure of the Dominion for the month ending 31st May, 1868:—

Customs	$940,294 37
Excise	229,700 41
Post-Office	89,690 32
Public Works, including Railways	72,784 38
Bill Stamp Duty	10,970 25
Miscellaneous	69,017 01
Total	$1,412,456 74
Expenditure	$604,722 27

QUEBEC PROVIDENT AND SAVINGS' BANK.—QUARTERLY ABSTRACT.—Balance at the credit of Depositors on the 1st March, 1869, $548,445 04. Received from Depositors from 1st March, to 31st May inclusive, $81,313 17. Withdrawn during the same period, $96,238 60. Decrease in the last quarter, $14,935 43. Due to depositors this day, $533,219 61.—GEO. VEASEY, Cashier.

TRUST AND LOAN COMPANY.—The report to be presented on the 31st May, shows an available balance, including £3,235 brought forward from September last, of £18,122, and recommends a dividend at the rate of 8 per cent. per annum, less income tax; and that £4,499 be carried to the reserve fund, leaving 3,623 to be carried forward. The reserve fund, after charging it with £2,272 for losses on realisation of securities in default, will now be £70,618.

BANK OF ENGLAND.—The return for the week ending 19th May, shows the following changes compared with those of the previons week:—

A decrease of Public Deposits of	£292,804
An increase of Other Deposits of	748,606
No change in Government Securities	
An increase of Rest of	12,549
A decrease of other Securities of	735,061
An increase of Bullion of	245,551
Ad increase of Notes unemployed	584,595
Total amount of Notes in circulation	23,337,285
Ditto of Bullion and Gold and Silver Coin	16,808,940
Bank minimum rate of Discount since May 6th, 1869	4½ per ct.

The bank has increased sufficiently to justify the Directors in abstaing from further advancing the rate of discount. There is a moderate accession to the bullion, causing the stock to approximate to £17,000,000, and a still larger addition to the reserve, which now stands at not much less than eight millions and a-half. If the present rate of progress be maintained a few weeks longer anticipations of rising discounts may be dismissed. *Herepath's Journal.*

—The Bank of Commerce has opened a branch at Simcoe.

—It is reported that the Scottish Amicable Life Assurance Company will shortly make a deposit in this country.

Railway News.

GREAT WESTERN RAILWAY.—Traffic for week ending May 21, 1869.

Passengers	$28,145 35
Freight	42,855 83
Mails and Sundries	2,320 08
Total Receipts for week	$73,321 26
Coresponding week, 1868	70,130 23
Increase	$3,191 03

NORTHERN RAILWAY.—Traffic receipts for week ending May 29th, 1869.

Passengers	$33,27 44
Freight and live stock	12,626 97
Mails and sundries	2,515 43
	$18,469 84
Corresponding Week of '68.	17,116 28
Increase	$1,353 66

KINGSTON AND FRONTENAC RAILWAY COMPANY.—A provisional Company with the above name has been formed in Kingston, and a prospectus was, some time since, issued. The capital stock is placed at $100,000 in 1,000 shares of $100 each. The Provisional Directors are: R. J. Cartwright, John Caruthers, Hon. A. Campbell, John Paton and O. S. Strange, M.D. It is proposed to run a wooden road from twenty to fifty miles into the back country from Kingston. The Board think it can be done for $4,000 per mile or less.

(*a*) Infraction and non-compliance with the terms of the Policy. (*b*) Also $1,434,541, Inland Marine risks. (*c*) Amounts calculated in detail. (*d*) Estimate. (*e*) Caus fraud. (*f*) Since paid. (*g*) Resisted for want of just proof. (*h*) Unearned premiums taken at 35 per cent. (*i*) Resisted on account of non-existence at the time of fire of t goods insured. (*k*) Liability unlimited. (*l*) $50,000 added for unearned premiums from previous year. (*m*) $20,000 added for unearned premiums from previous year. ($ 0,00 added for unearned premiums from previous year. (*o*) $15,000 added for unearned premiums from previous year. (*p*) Business confined to first-class risks in Montre City alone.

Note.—The Liverpool and London and Globe Company does not separate its Fire and Life business claiming that the Act does not require it. The Queen do. The busin of the Guardian Fire and Life only commenced in the current year. The Quebec Fire makes no return. The Companies named in the lower table on this page are not required give the details of their business mentioned in Forms B and C of the upper table.

Commercial.

The New York Chamber of Commerce passed a esolution at a meeting on the 3rd, endorsing the ction of the Committee of Ways and Means in ecommending the President to renew negotiations ith Great Britain, for the purpose of bringing bout a renewal of the Reciprocity Treaty, and ecuring to citizens of the United States the free- om of the St. Lawrence and of the inshore fish- ies of British North America. Gen. Wallbridge ade a lengthy speech, and stated the questions tween the United States and the Provinces as— rst, an interchange of the natural products of e soil, on such reciprocal terms as may be agreed on. Second, an assimilation of excise duties d of patent and copyright laws. Third, free ade and navigation of the river St. Lawrence d enlargement of its canals. Fourth, freedom the inshore fisheries of the coast of British nerica. Fifth, the regulation of transit trade. is useless to discuss these propositions, as they uld not be even taken into serious consideration the Government or people of this country, ing, on their face, one-sided and unfair.

The first shipment of lead from the Frontenac d mines was forwarded to Montreal recently J. Carruthers & Co., and consigned to the Can- a Lead Company.

The receipts of flour and grain at the five West- n Lake ports, since August, 1867, and 1868, re :—

	1868.	1867.
Flour, bbls	4,766,200	3,637,000
Wheat, bush	32,633,109	30,400,300
Corn, bush	24,728,600	25,826,300
Oats, bush	17,140,900	14,551,200
Barley, bush	2,624.600	2,756,800

The schooner Magdala was chartered on the 8th ne, to carry 10,000 bush. malt to Chicago, the ppers being Messrs. Aldwell & Co., of this city. is is the second shipment made by this firm s year. The freight was 5c. U. S. currency.

Royal Canadian Bank Bills now sell at 95c.

Mr. Rose has announced in the House of Com- ns that he proposes to take steps to protect the t and hop growing interests in this country.

The stocks of the following articles in Halifax, the 1st June, were :—Rum—446 puns., 13 l. Sugar—1,736 hhds., 205 tres., 826 brls., bxs. Molasses—3,951 puns., 535 tres., 585 brls. e people of Picton held a meeting the other about the silver question. Mr. Striker, ve, occupied the chair, and Mr. Twigg acted as retary, A committee was struck to draw up a ition to the Legislature, asking that "Silver made a legal tender in payment of customs ies at its intrinsic value, in order that it may be pped out of the country, or in some other way eek to remove what is felt to be so great an ." We do not know what the ideas of this ting may have been about the *intrinsic* value ilver coin ; their remedy is, we fear, no remedy ll.

Toronto Market.

rade for the past week shows no indication of rovement whatever, in fact their seems to be greater dullness. The weather has kept cool n abundant showers of rain ; the season is sually late.

RODUCE.—The slight improvement noted last k has, as we anticipated, been entirely lost, the market has again became dull and trade nant. *Wheat.*—Receipts for the week 35,240 . Stock in store on the 7th, 89,450 bush. t of 2,000 bush. spring, sold at 96c. f.o.b. and 0 bush at 95c.; one or two cars sold at 94 to ; a car of midge proof sold at 95. Fall nom- ; the tendency of the market is downward. .—Receipts 1,200 bush ; stock in store on the 7th, 35,000 bush., the market has declined to 50c for carloads on the track. *Barley.*—Is out of market ; there are buyers at 80 to 85c. *Peas.*—No receipts; stock on the 7th, 12,744 bush.; market unsettled, and nominal at 65c. *Corn.*—Sellers at 60c. by the car load. *Rye.*—On the street market is worth 56c.

FLOUR.—Receipts 1,000 bbls. and 1,440 bbls. last week; stock in store on the 7th 10,995 bbls. The market closed dull and 5 to 10c. lower. A lot of 200 bbls. sold at $4.00. Fancy sold $4.25 and extra at the same price, f.o.b. *Oatmeal.*—Small lots sell for retail at $5.75 to $6. *Cornmeal.* Remains unchanged at $3.75 to $4. *Bran.*—Car lots are worth $14 per ton.

PROVISIONS.—Business has dwindled down to almost nothing except a small trade with retailers. *Butter*—Is nominal. *Eggs*—Were firmer but have since declined and closed at 12 to 12½c. There is nothing doing in cheese except in small lots of old at 15 to 16c. *Bacon.*—Sells at 12 to 13c. *Hams*—Smoked 12½ to 13½c. *Salt.*—Goderich has also been reduced 15c. and sells freely at the reduction.

HARDWARE.——There is some demand for harvest tools. Bar iron is also quoted firmer.

GROCERIES.—A fair trade reported by some houses but there is no disposition to extend business just at present. Prices are unchanged.

WOOL.—The new crop is now coming forward and sells at 32c.

PETROLEUM.—The market is dull at 22 to 25c. Benzole is in good demand.
